TIE-OUT EXHIBIT · CREDIT-SUITE · 5 SEPTEMBER 2026

How KeyBank's 0.92 was proved

One figure on one dashboard, traced link by link to the bank's own Call Report as filed with its regulators — a document neither we nor the FDIC wrote. Every step below was run, not described, and the pictures are the source itself.

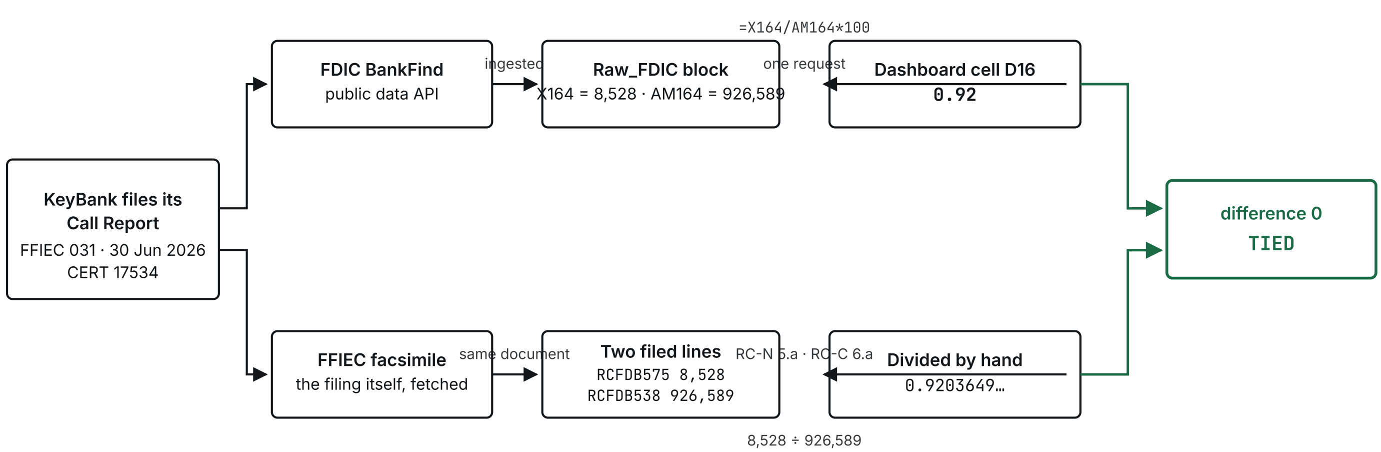
TIED difference: 0

FIGURE	BANK	AS AT	SHOWN
Card 30–89 days past due	KeyBank NA · CERT 17534	30 June 2026	0.92

> **A number confirmed only by your own system is confirmed by nothing.**
>
> So the question asked of every source here was: *could this disagree with me?* The FDIC's data feed could not — it is where our number came from. KeyBank's own filed Call Report could.

How the dots connect

The same fact travels two roads. The long one is how the number reaches the screen every quarter. The short one is the check: fetch the filing directly, read the two lines off it, divide them by hand. A tie-out is the two roads arriving at the same number.



The production path along the top, the check along the bottom. Only the bottom path touches a document we do not control, which is what makes it evidence rather than a second opinion from the same source.

This figure was picked because it is the one that moved. Until the day before, the dashboard showed the FDIC's own published card delinquency rate, which divides by the bank's **total assets**. It now divides by the **card book**. The number on the screen went from 0.005 to 0.92, so it is the number most in need of proof.

1 The figure WHAT A READER SEES

The loan-book dashboard, KeyBank's row, the **Card 30-89** column. Read by opening the workbook in Excel and forcing a full recalculation, because the cell holds a formula and nothing computes one until Excel does.

Bank	CERT	Group	Card 30-89	Card 90+	Card NA	Card NCOq	Auto 30-89
JPMorgan Chase Bank NA	628	peer	0.89	0.96	0.00	3.08	1.03
Wells Fargo Bank NA	3511	peer	1.22	1.30	0.00	4.09	1.22
Bank of America NA	3510	peer	1.05	1.17	0.00	3.47	0.64
Citibank NA	7213	peer	1.26	1.32	0.00	4.01	
US Bank NA	6548	peer	1.13	1.11	0.00	3.65	0.91
PNC Bank NA	6384	peer	0.90	0.93	0.00	3.01	0.46
Truist Bank	9846	peer	1.34	1.40	0.00	4.99	2.02
Capital One NA	4297	peer	1.96	1.94	0.01	4.79	4.32
KeyBank NA	17534	self	$\boxed{0.92}$	1.01	0.69	3.89	0.49

Bank_Peer_Monitor.xlsm → Dashboard_LoanBook → cell D16. Displayed `0.92`; the value Excel holds is 0.9203649082818812. Marked in red. Capital One reads 1.96 and JPMorgan 0.89 in the same column, so the figure sits where a reader would expect it among its peers.

2 The call RERUNNABLE, REAL PARAMETERS

One request produced both inputs. Paste it into a browser and you get what we got.

```
https://banks.data.fdic.gov/api/financials?filters=CERT:17534%20AND%20REPDTE:20260630&fie
```

THE RESPONSE, AS RETURNED

```
{"data":[{"data":{"CERT":17534,"REPDTE":"20260630",
                  "P3CRCD":8528,
                  "LNCRCD":926589,
                  "ID":"17534_20260630"}}]}
```

> **P3CRCD** is card balances 30 to 89 days late and still accruing interest. **LNCRCD** is the credit-card book. Both are in **thousands of dollars** — the scale the FDIC publishes and the scale the workbook lands.

3 The derivation REDOABLE BY HAND

Not "then the system computes it". Two cells and one division, both of which you can open and read.

slot09

REPDTE	P3CRCD	LNCRCD
2026-06-30	8528	926589

Raw_FDIC, slot 9 (KeyBank), newest quarter. A164 = 2026-06-30, X164 = 8,528, AM164 = 926,589. The columns in between are hidden in this shot only, so the three cells that matter sit side by side.

THE CELL'S FORMULA, VERBATIM

```
=IF(OR(Raw_FDIC!X164="",Raw_FDIC!AM164=""),"",
    IF(Raw_FDIC!AM164=0,"",Raw_FDIC!X164/Raw_FDIC!AM164*100))
```

In words: if either input is blank, show blank. If the card book is zero, show blank — a rate on a book that does not exist is not zero, it is nothing to check. Otherwise past-due over the book, times 100.

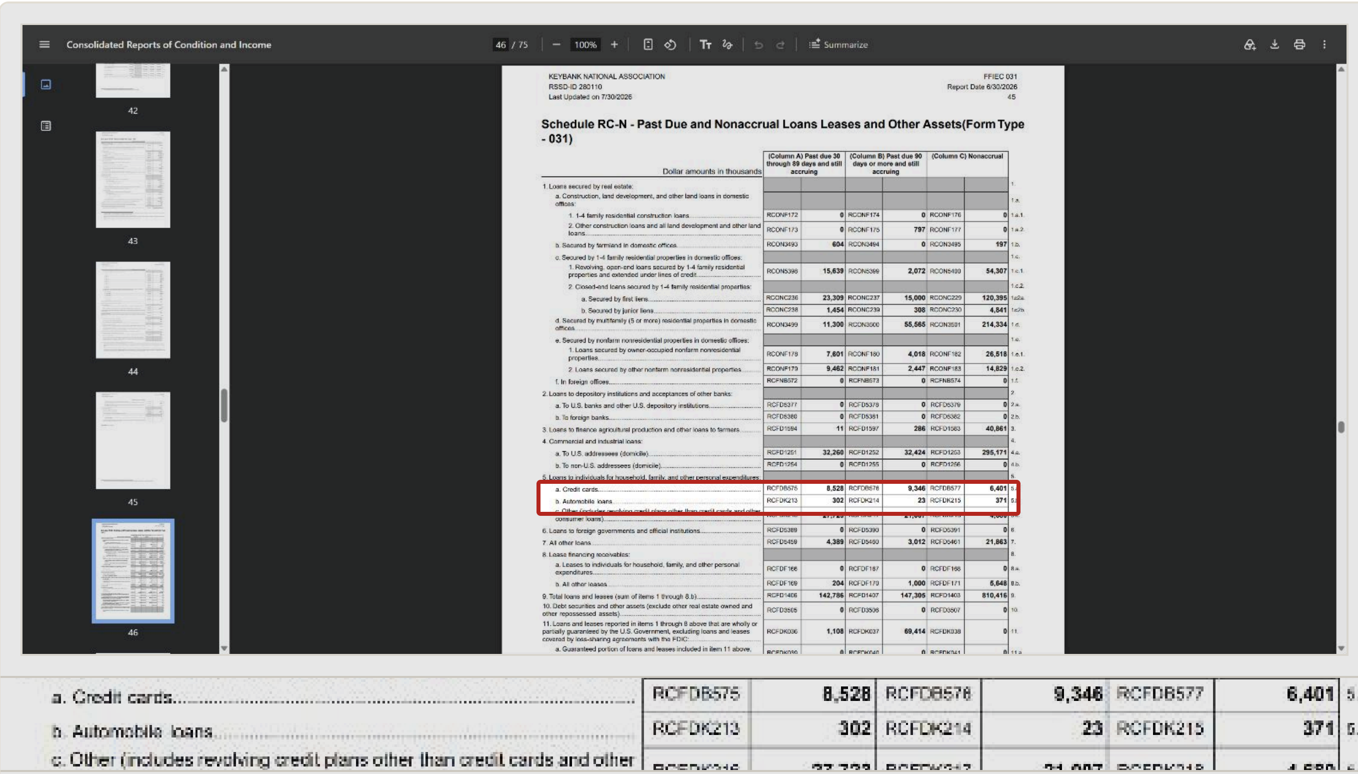
```
8,528 / 926,589 × 100 = 0.9203649082818812
```

> The engine computes the identical number in Python from the same declarative table that writes this formula, so the spreadsheet and the code cannot drift apart without a test failing.

4 The independent source A DOCUMENT WE DID NOT WRITE

KeyBank's own Consolidated Report of Condition and Income, form FFIEC 031, as filed for 30 June 2026 and last updated 30 July 2026. Public, no login, from the regulator's own repository: `cdr.ffiec.gov` → View Facsimile → FDIC cert 17534 → 06302026.

Both pages carry **KEYBANK NATIONAL ASSOCIATION**, **FFIEC 031** and **Report Date 6/30/2026** in the page header — so the entity, the form and the date are in the same shot as the number, and none of it has to be taken on trust.



`Schedule RC-N` `page 46 of 75` `line 5.a "Credit cards"` `column A` `RCFDB575` `$ thousands`

The numerator: 8,528. Column A is "Past due 30 through 89 days and still accruing" — disjoint from column C, nonaccrual, so the two are never added. Its neighbours on the same row are the 90-plus figure (9,346) and nonaccrual (6,401); neither is this one. **RCFD** means consolidated, including foreign offices, which is the basis a form 031 filer reports and the basis the FDIC's totals use.

Schedule RC-C Part I - Loans and Leases(Form Type - 031)

Do not deduct the allowance for credit losses on loans and leases or the allocated transfer risk reserve from amounts reported in this schedule. Report (1) loans and leases held for sale at the lower of cost or fair value, (2) loans and leases held for investment, net of unearned income, and (3) loans and leases accounted for at fair value under a fair value option. Exclude assets held for trading and commercial paper.

Dollar amounts in thousands	(Column A) Consolidated Bank		(Column B) Domestic Offices		
1. Loans secured by real estate[1]	RCFD1410	NR			1.
a. Construction, land development, and other land loans:					1.a.
1. 1-4 family residential construction loans	RCFDF158	597	RCONF158	597	1.a.1.
2. Other construction loans and all land development and other land loans	RCFDF159	2,895,066	RCONF159	2,895,066	1.a.2.
b. Secured by farmland (including farm residential and other improvements)	RCFD1420	118,714	RCON1420	118,714	1.b.
c. Secured by 1-4 family residential properties:					1.c.
1. Revolving, open-end loans secured by 1-4 family residential properties and extended under lines of credit	RCFD1797	2,929,570	RCON1797	2,929,570	1.c.1.
2. Closed-end loans secured by 1-4 family residential properties:					1.c.2.
a. Secured by first liens	RCFD5367	20,584,113	RCON5367	20,584,113	1.c.2.a.
b. Secured by junior liens	RCFD5368	276,020	RCON5368	276,020	1.c.2.b.
d. Secured by multifamily (5 or more) residential properties	RCFD1460	5,444,590	RCON1460	5,444,590	1.d.
e. Secured by nonfarm nonresidential properties:					1.e.
1. Loans secured by owner-occupied nonfarm nonresidential properties	RCFDF160	3,009,614	RCONF160	3,009,614	1.e.1.
2. Loans secured by other nonfarm nonresidential properties	RCFDF161	5,802,961	RCONF161	5,802,961	1.e.2.
2. Loans to depository institutions and acceptances of other banks:					2.
a. To commercial banks in the U.S.			RCONB531	0	2.a.
1. To U.S. branches and agencies of foreign banks	RCFDB532	0			2.a.1.
2. To other commercial banks in the U.S.	RCFDB533	0			2.a.2.
b. To other depository institutions in the U.S.	RCFDB534	0	RCONB534	0	2.b.
c. To banks in foreign countries			RCONB535	1,627	2.c.
1. To foreign branches of other U.S. banks	RCFDB536	0			2.c.1.
2. To other banks in foreign countries	RCFDB537	1,627			2.c.2.
3. Loans to finance agricultural production and other loans to farmers	RCFD1590	735,318	RCON1590	735,318	3.
4. Commercial and industrial loans:					4.
a. To U.S. addressees (domicile)	RCFD1763	36,979,972	RCON1763	36,979,972	4.a.
b. To non-U.S. addressees (domicile)	RCFD1764	394,717	RCON1764	394,717	4.b.
5. Not applicable					5.
6. Loans to individuals for household, family, and other personal expenditures (i.e., consumer loans) (includes purchased paper):					6.
a. Credit cards	RCFDB538	926,589	RCONB538	926,589	6.a.
b. Other revolving credit plans	RCFDB539	268,825	RCONB539	268,825	6.b.
c. Automobile loans	RCFDK137	62,212	RCONK137	62,212	6.c.
d. Other consumer loans (includes single payment and installment loans other than automobile loans, and all student loans)	RCFDK207	4,200,208	RCONK207	4,200,208	6.d.
7. Loans to foreign governments and official institutions (including foreign central banks)	RCFD2081	0	RCON2081	0	7.
8. Obligations (other than securities and leases) of states and political subdivisions in the U.S.	RCFD2107	2,445,079	RCON2107	2,445,079	8.
9. Loans to nondepository financial institutions and other loans					9.

loans) (includes purchased paper):					
a. Credit cards	RCFDB538	926,589	RCONB538	926,589	6.a.
b. Other revolving credit plans	RCFDB539	268,825	RCONB539	268,825	6.b.

`Schedule RC-C Part I` `page 24 of 75` `line 6.a "Credit cards"` `column A` `RCFDB538` `$ thousands`

The denominator: 926,589. Column A is the consolidated bank. Column B, domestic offices, reads the same here because KeyBank holds no card balances abroad. The lines under it — other revolving plans 268,825, auto 62,212, other consumer 4,200,208 — are different books and are not in this ratio.

The digits were read twice. Once off these pages, and once off the same filing's machine-readable XBRL, fetched from the same regulator: `RCFDB575 = 8,528,000` and `RCFDB538 = 926,589,000` dollars, which is 8,528 and 926,589 thousand. Two renderings of one filing, agreeing.

5 The comparison BOTH NUMBERS, ADJACENT

Put side by side before any verdict was written down.

```
ours     Dashboard_LoanBook!D16, 8,528 / 926,589 × 100        0.9203649082818812
source   RC-N 5.a col A ÷ RC-C 6.a col A, as filed            0.9203649082818812
difference                                                    0
```

A match is only a match if four things are the same. Each was checked, not assumed.

	OURS	THE FILING	SAME
Entity	CERT 17534, KeyBank NA	CERT 17534 / RSSD 280110, KeyBank National Association	yes
Date	2026-06-30	Report Date 6/30/2026	yes
Basis	consolidated, still-accruing only	column A of RC-N; RCFD consolidated	yes
Units & scale	thousands, ratio ×100	"Dollar amounts in thousands"	yes

Not one figure – the whole roster

The same filing check ran over every dollar line the workbook lands for KeyBank. The denominator matters more than the score, so here it is in full.

```
Tied out                                   48 of 53 landed lines
  TIED                                                        48
  DIFFERS                                                      0
  COULD NOT                                                    5
```

The five that could not be tied, each with its obstacle named rather than counted as a pass:

- **Two capital ratios** — the FDIC publishes them as percentages, and there is no single filed line to compare a percentage against. Their components tie elsewhere, and the ratio is recomputed from those.
- **Three quarterly charge-off flows** — the Call Report reports charge-offs from 1 January, running. A quarter is the difference between two filings, not a line in one. Different basis, and reconciling it is a separate piece of work. This is the same year-to-date convention that produced a 670% charge-off rate on a chart the day before.

How to run it yourself

Four steps, each copy-pastable. Nothing here needs me.

1. **Build the workbook against today's FDIC data.** It writes `example-output/Bank_Peer_Monitor.xlsm`.

```
python tools/live_acceptance.py fdic --keep example-output
```

2. **Open it and read the figure.** Tab `Dashboard_LoanBook`, KeyBank's row, column `Card 30-89`. Click the cell to see the formula and the two raw cells it reads.

3. **Run the tie-out against the filings.** It prints, per line, the filed value, the landed value, the MDRM code that resolved, and a verdict.

```
python -m credit_suite.sources.fdic.runner -w example-output/Bank_Peer_Monitor.xlsm --t
```

4. **Open the filing and look.** The same document these pictures came from, straight from the regulator:

```
https://cdr.ffiec.gov/Public/ViewFacsimileDirect.aspx?ds=call&idType=fdiccert&id=17534&
```

Schedule RC-N is page 46, Schedule RC-C Part I is page 24. Change `id` for another bank and `date` for another quarter.

What it found

Running the tie-out rather than describing it changed the software. That is the whole return on doing it.

Three commercial-loan lines were citing the wrong form

On the first run, three lines came back **NOT IN FILING**: commercial and industrial loans 30–89 days late, 90-plus, and nonaccrual. Our provenance map cited codes `1606 / 1607 / 1608`. Those are the codes for form **041** — the shorter Call Report, filed by banks with no foreign offices.

KeyBank files form **031**, which splits commercial loans into 4.a (US borrowers) and 4.b (non-US). The filing carries our exact landed values under `RCFD1251` = 32,260, `RCFD1252` = 32,424, `RCFD1253` = 295,171. The numbers were right all along; the citation pointed at a line that does not exist on the form this bank files.

The commercial-loan *balance* row had carried the 031 alternative since it was written. The three past-due rows had never been given it. Fixed, pinned by a test so it cannot come back, and the golden file re-banked: nine cells moved, all of them citations, no value anywhere. **45 of 48 became 48 of 48.**

What I got wrong

I misread a digit off the page. Reading the home-equity balance off the Schedule RC-C image I recorded 2,929,670. The same filing's XBRL says **2,929,570**. The page image is small, the filing is not ambiguous, and the error was mine in the reading. It does not touch the figure proved here. It is recorded because a tie-out that hides its own misreads is worth nothing — and because it is the argument for reading every figure twice.

What this does not prove

- **One bank, one quarter.** The roster is 48 lines for KeyBank at 30 June 2026. Coverage across the other eleven banks and sixteen quarters is a different job and has not been done.
- **The chart workbook was not included.** It reads the same cells, but that link is asserted here, not executed.
- **The capture route differed from how it reads.** The regulator's embedded viewer would not respond to automation, so the filing was fetched — by the same button-press the tie-out tool uses — and served locally to photograph the two pages. The document is byte-for-byte the regulator's; the screen it was photographed on was ours.
