KeyBank credit card nonaccrual rate, 2026Q2: 0.69%

The workbook built by `threshold-engine book`, set beside KeyBank, N.A.'s filed Call Report for 30 June 2026. Run 14 October 2026 (evening, US time; 15 Oct UTC). **TIED**

1 · How the dots connect

The same fact travels two roads. The top road is how the number reaches the Summary and Decide tabs. The bottom road goes to the report KeyBank itself filed with the FFIEC, which this software does not produce and cannot change. That road is what makes this evidence rather than a second opinion from the same feed. They meet at difference 0, to the last digit of the number Excel holds.

2 · The five links

Link 1 · The figure, read out of the workbook in Excel

Which workbook. Built with the new `book` command at commit `d1e353a1` (branch `threshold-engine-book`): `python -m threshold_engine book book_try/book.json book.xlsx`. `book_try/book.json` is `books/consumer-public.json` with `"peers": null` and its series list pointing at the series CSVs a `peers build` wrote earlier the same evening. 95 series, 82 quarters.

How it was read. `scripts/read_workbook.ps1 -Workbook book.xlsx` opened it read-only in a new Excel 16.0 through COM, ran `CalculateFull`, and read each cell's `Value2` (the number Excel holds), `Text` (what it shows) and `Formula`. For Decide it then clicked the three slicers the way a person does: *Credit card*, *Nonaccrual*, *KeyBank*, every other button off, and recalculated. The pictures are Excel's own (`Range.CopyPicture`), with a red border put on the cell for the picture only. The workbook was closed without saving. Everything read is in `workbook-reads.json`.

Where	Excel shows	Excel holds (Value2)	Formula
Summary!G11 (row *Nonaccrual*, group *KeyBank*, *Latest (%)*)	0.69	0.6908132947833397	`=IFERROR(INDEX(Thresholds!$J$5:$J$99,MATCH("Credit card - Nonaccrual - KeyBank",Thresholds!$A$5:$A$99,0)),"")`
Summary!H11, rating	5 High		from Thresholds K17 and L17

Decide!B112, the headline	KeyBank, nonaccrual, credit card: 0.69% in 2026Q2 · rating 5 High		`…TEXT(INDEX(Thresholds!$J$5:$J$99,$AA$3),"0.00")…`, with AA3 = 13 (Thresholds row 17)
Decide!E117, *Same product and measure*, KeyBank	0.69	0.6908132947833397	INDEX of Thresholds!J by series name
Thresholds!J17 (*Latest value*), row A17 = *Credit card - Nonaccrual - KeyBank*, I17 = 2026Q2	0.69	0.6908132947833397	none: a value
Data!N83 (header *Credit card - Nonaccrual - KeyBank*, A83 = 2026Q2)	0.69	0.6908132947833397	none: a value

		Industry (every bank)		Peer group (15 banks)		KeyBank		KeyBank vs Peer group (15 banks)
Product	Measure	Latest (%)	Rating	Latest (%)	Rating	Latest (%)	Rating	difference
Credit card	Net charge-offs	4.01	3 Moderate	3.54	3 Moderate	*Not in this workbook*		
	Gross charge-offs	5.19	**4 Moderate-High**	4.46	**4 Moderate-High**	*Not in this workbook*		
	30-89 days past due	1.37	3 Moderate	1.33	3 Moderate	0.92	2 Moderate-Low	-0.41

Summary, as Excel draws it. The marked cell is G11.

Decide · one series at a time — **Decided: 0 of 95 · accepted 0, rejected 0**

Click a product, a measure and a source. The yellow row under the buttons is that series' decision: type in it, and everything below follows. Save the file (Ctrl+S) to keep your decisions.

Product	Measure	Source
Auto	30+ days past due incl. nonaccrual	Industry (every bank)
Credit card	30-89 days past due	KeyBank
Home equity	90+ days past due and accruing	Peer group (15 banks)
Mortgage	90+ days past due incl. nonaccrual	
Other consumer	Nonaccrual	
	Gross charge-offs	
	Net charge-offs	

Where it stands now

KeyBank, nonaccrual, credit card: 0.69% in 2026Q2 · rating 5 High

Same product and measure	Latest	Rating	Decision
Industry (every bank)	0.08	1 Low	Not decided
Peer group (15 banks)	0.01	1 Low	Not decided
KeyBank	0.69	5 High	Not decided

KeyBank is 0.68 points higher than Peer group (15 banks).

Decide, after clicking the three slicers. The headline (B112, marked) and the KeyBank line of the comparison beneath it both read 0.69.

	What the lines rest on			Each rating begins at				Latest quarter			
Series	Median kept	Typical yearly move	Worst kept	2 Moderate-Low from	3 Moderate from	4 Moderate-High from	5 High from	Latest quarter	Latest value	Rating	Rating name
Credit card - Nor	0.28	0.09	1.81	0.19	0.23	0.33	0.63	2026Q2	0.69	5	High

Thresholds, header and row 17 only (the rows between are hidden for the picture). Column A is clipped in Excel; see *What it found*.

Quarter	Credit card - Nonaccrual - KeyBank
2025Q3	0.77
2025Q4	0.72
2026Q1	0.80
2026Q2	0.69

Data!N, the last four quarters.

Link 2 · The call

```
curl -s "https://api.fdic.gov/banks/financials?filters=CERT:17534%20AND%20REPDTE:20260630&fields=CERT,REPDTE,
NAMEFULL,LNCRCD,NACRCD,P3CRCD,P9CRCD&format=json"
```

Response, 15 Oct 2026 00:38 UTC, whole (`fdic-17534-20260630.json`):

```
{"meta":{"total":1,"parameters":{"filters":"CERT:17534 AND REPDTE:20260630","fields":"CERT,REPDTE,NAMEFULL,LN
CRCD,NACRCD,P3CRCD,P9CRCD"},"index":{"name":"risview_20260819185831","createTimestamp":"2026-08-19T18:58:33
Z"}},"data":[{"data":{"P3CRCD":8528,"REPDTE":"20260630","NAMEFULL":"KEYBANK NATIONAL ASSOCIATION","LNCRCD":92
6589,"CERT":17534,"NACRCD":6401,"P9CRCD":9346,"ID":"17534_20260630"},"score":0}],"totals":{"count":1}}
```

`peers pull` asks the same endpoint for every filer in the quarter at once (`filters=REPDTE:20260630`, 4,313 rows) and keeps the rows in its cache, `ind_cache/q20260630.json` (written 14 Oct 2026 10:58 local). The cached KeyBank row reads `NACRCD 6401, LNCRCD 926589`, the same as the call made today.

What the two fields are. The FDIC's own dictionary (`All Financial Reports.xlsx`, sheet *Reference-Variables&Definitions*, fetched today) says, verbatim:

Row	Variable	Title	Definition
1128	NACRCD	Credit Cards and Related Plans in Nonaccrual Status	(YTD, $) Total credit cards loans to Individuals that are in nonaccrual status and no longer accruing interest. Prior to 2001, included revolving credit plans other than credit cards.
906	LNCRCD	Credit Cards	(YTD, $) Consumer loans extended through credit card plans. Prior to 2001, includes check credit and other revolving credit plans.

It names no Call Report line. The captions it matches are RC-N item 5.a *Credit cards*, column C *Nonaccrual* (MDRM B577) and RC-C Part I item 6.a *Credit cards* (B538), each a single filed line, not a sum. That was then shown on the numbers, for every bank and not only KeyBank: `scripts/fields_vs_filing.py` set the FDIC's NACRCD and LNCRCD for 30 June 2026 beside the FFIEC's bulk file of every filer's filed lines.

```
FFIEC bulk Call Report 06/30/2026: 4296 filers (POR). FDIC API rows at 20260630: 4313 (meta total 4313, index
risview_20260819185831).
Joined on FDIC certificate number: 4295 banks.
NACRCD against B577 (RC-N 5.a column C): 4295 equal to the dollar-thousand, 0 differ, 0 FDIC blank where file
d, 0 neither has a value; total 4295
LNCRCD against B538 (RC-C Part I 6.a): 4295 equal to the dollar-thousand, 0 differ, 0 FDIC blank where filed,
0 neither has a value; total 4295
```

```
KeyBank (cert 17534, RSSD 280110): NACRCD 6401, RCFDB577 = 6401; LNCRCD 926589, RCFDB538 = 926589
Differences: none.
```

Link 3 · The derivation

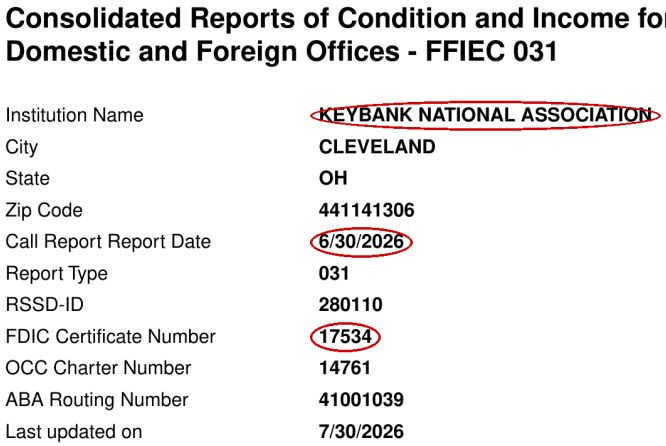

1. `peers/delinquency.py`: for *Credit card* the balance field is `LNCRCD` and the nonaccrual field is `NACRCD` (`FIELDS`); the measure *nonaccrual* uses only that numerator (`MEASURES`).
2. `bank_delinquency(…, cert "17534", "Credit card", "nonaccrual", …)` takes the 2026Q2 row as filed: numerator 6,401, balance 926,589. KeyBank is exempt from the 1,000,000 minimum book. The jump and acquisition rules only blank a four-quarter average, never a quarter-end rate.
3. Rate = `100 * num / bal` = 100 × 6,401 ÷ 926,589 = **0.6908132947833397**. `peers build` writes it to `credit-card_keybank_delinquency-nonaccrual_quarter-end.csv`, row `2026-06-30,0.6908132947833397` (a copy is beside this document). Its header says "*quarter-end rate: 100 x NACRCD / LNCRCD, both from the same filing, %. Amounts are $ thousands at quarter-end, as filed*".
4. `book` reads that CSV and `workbook.py` writes the last point twice, as a value: Data!N83 (the column) and Thresholds!J17 (`th.cell(r, 10, lp.value)`). Neither is a formula.
5. Summary!G11 is `INDEX(Thresholds!$J$5:$J$99, MATCH("Credit card - Nonaccrual - KeyBank", Thresholds!$A$5:$A$99, 0))`. Decide's headline is `TEXT(INDEX(Thresholds!$J$5:$J$99,$AA$3),"0.00")`, where AA3 is the Thresholds row of the one series the slicers leave showing. So both show J17, and 0.69 is J17 rounded to two places for display.

a. Loans to nondepository financial institutions	RCFDJ454	21,354,472	RCONJ454	21,354,472	9.a.
b. Other loans:					9.b.
1. Loans for purchasing or carrying securities, including margin loans	RCFD1545	60,563	RCON1545	60,563	9.b.1.
2. All other loans (exclude consumer loans)	RCFDJ451	1,321,422	RCONJ451	1,321,422	9.b.2.
10. Lease financing receivables (net of unearned income)			RCON2165	1,997,330	10.
a. Leases to individuals for household, family, and other personal expenditures (i.e., consumer leases)	RCFDF162	0			10.a.
b. All other leases	RCFDF163	1,997,330			10.b.
11. LESS: Any unearned income on loans reflected in items 1-9 above	RCFD2123	0	RCON2123	0	11.
12. Total loans and leases held for investment and held for sale (item 12, column A must equal Schedule RC, sum of items 4.a and 4.b)	RCFD2122	111,809,579	RCON2122	111,809,579	12.

Where the RC-C cut sits on its page.

Second reading, the filing's XBRL (the machine-readable copy the FFIEC publishes with the pages). The lines, verbatim:

```
<cc:RCFDB577 contextRef="CI_280110_2026-06-30" unitRef="USD" decimals="0">6401000<
<cc:RCFDB538 contextRef="CI_280110_2026-06-30" unitRef="USD" decimals="0">926589000<
<cc:RCONB538 contextRef="CI_280110_2026-06-30" unitRef="USD" decimals="0">926589000<
<cc:RSSD9017 contextRef="CI_280110_2026-06-30">KeyBank National Association<
<cc:RCON9999 contextRef="CI_280110_2026-06-30" unitRef="NON-MONETARY" decimals="0">20260630<
```

The XBRL states dollars; 6,401,000 USD is 6,401 in thousands. `280110` in the context is the RSSD-ID printed on the page header. Both readings agree on both lines.

By hand, on the filing's own numbers. 926,589 × 0.0069 = 6,393.4641. 6,401 − 6,393.4641 = 7.5359. 7.5359 ÷ 926,589 = 0.0000081329… So 6,401 ÷ 926,589 = 0.0069081329…, and × 100 = **0.69081329…%**, which shows as 0.69.

```

"diff 0" on the rate is exact: the double Excel holds in G11 and the double 100 × 6,401 / 926,589 are the same number (Excel's read prints it as `0.69081329478333975`, 17 digits; parsed, it is `0.6908132947833397`).

Must be the same	Ours	Source	
Entity	KeyBank, FDIC cert 17534 (the CSV's header; the API's NAMEFULL *KEYBANK NATIONAL ASSOCIATION*)	KEYBANK NATIONAL ASSOCIATION, FDIC certificate 17534, RSSD-ID 280110 (cover, ringed)	same
Period	2026Q2 (Thresholds!I17, Data!A83), REPDTE 20260630	Report date 6/30/2026 (cover and every page header)	same
Basis	Nonaccrual card balances over card balances, both at quarter-end, as filed, consolidated bank	RC-N 5.a column C over RC-C Part I 6.a column A (Consolidated Bank), RCFD lines; the domestic line is the same 926,589	same
Units	Rate in %; the amounts behind it in $ thousands	Pages in $ thousands; XBRL in USD, divided by 1,000; the rate computed by hand in %	same

TIED The 0.69% the firm reads on Summary and Decide is KeyBank's own filed card nonaccrual divided by its own filed card balance.

3 · Roster

Figures set beside the filing: 3

Verdict	Count	Which
DIFFERS	0	
COULD NOT	0	

TIED	3	the rate (Summary!G11 = Decide headline = Thresholds!J17 = Data!N83); its numerator, 6,401 (RC-N 5.a col C); its balance, 926,589 (RC-C 6.a col A)

3 of 3 tied. The numerator and balance are not in the workbook; they are tied at the FDIC API, the hop before the series file. Separately, the field-to-line check covered 4,295 banks on each of the two fields: 4,295 equal on each, 0 differ.

4 · How to run it yourself

From `C:\Users\ajish\SATC\threshold-engine`, in PowerShell. Steps 1 and 2 tie out the firm's own build the same way: point `-Workbook` at it.

1. Build the workbook. The one tied out here:

   ```
   $env:PYTHONPATH = "src"
   python -m threshold_engine book "C:\Users\ajish\AppData\Local\Temp\claude\C--Users-ajish-SATC\261f7248-3cbc-4aa2-aacf-e4ff9181778a\scratchpad\book_try\book.json" book.xlsx
   ```

   The firm's own: `python -m threshold_engine book books\consumer-public.json book.xlsx` (that one runs `peers build` first, about 12 minutes).
2. Read it in Excel and photograph it (opens its own Excel, read-only, never saves):

   ```
   powershell -ExecutionPolicy Bypass -File docs\tie-out\keybank-card-nonaccrual-2026-10-14\scripts\read_workbook.ps1 -Workbook book.xlsx -Out work\reads
   ```

   It prints `Summary G11 = 0.69081329478333975; … Decide B112: KeyBank, nonaccrual, credit card: 0.69% in 2026Q2 · rating 5 High`. By hand instead: open `book.xlsx`; Summary, row *Nonaccrual* under *Credit card*, group *KeyBank*, *Latest (%)*; then on Decide click *Credit card*, *Nonaccrual*, *KeyBank*.
3. Ask the FDIC:

   ```
   curl.exe -s "https://api.fdic.gov/banks/financials?filters=CERT:17534%20AND%20REPDTE:20260630&fields=CERT,REPDTE,NAMEFULL,LNCRCD,NACRCD&format=json"
   ```

   It returns `"NACRCD":6401` and `"LNCRCD":926589`.
4. Open the filing in a browser:

   ```
   https://cdr.ffiec.gov/Public/ViewFacsimileDirect.aspx?ds=call&idType=fdiccert&id=17534&date=06302026
   ```

   Schedule RC-N (report page 45), item 5.a *Credit cards*, Column C *Nonaccrual*: **6,401**. Schedule RC-C Part I (report page 23), item 6.a *Credit cards*, Column A: **926,589**.
5. Divide: 6,401 ÷ 926,589 × 100 = 0.6908…, shown as 0.69.
6. To repeat the downloads, pictures and the every-bank field check (outputs under `work\`):

   ```
   python docs\tie-out\keybank-card-nonaccrual-2026-10-14\scripts\fetch.py --sources work\nac-sources
   python docs\tie-out\keybank-card-nonaccrual-2026-10-14\scripts\fetch_bulk.py --sources work\nac-sources
   python -I docs\tie-out\keybank-card-nonaccrual-2026-10-14\scripts\fields_vs_filing.py --sources work\nac-sources --out work\fields-vs-filing.txt
   python docs\tie-out\keybank-card-nonaccrual-2026-10-14\scripts\capture.py --pdf work\nac-sources\call-17534-06302026.pdf --out work\images
   ```

5 · What it found

- **The figure is right, to the last digit Excel holds.** 0.6908132947833397 on Summary, Decide, Thresholds and Data is exactly 100 × 6,401 ÷ 926,589, KeyBank's filed RC-N 5.a column C over RC-C 6.a column A.
- **The two FDIC fields are the two filed lines, for every bank.** The FDIC's dictionary gives NACRCD and LNCRCD a title and a sentence, no line number. Against the FFIEC's bulk file for 30 June 2026, NACRCD equals B577 and LNCRCD equals B538 for all 4,295 banks in both, to the thousand. Neither is a sum. So the mapping `delinquency.py` relies on is shown, not assumed, for this quarter.
- **Thresholds!J (Latest value) is a typed value, not a link to the Data tab.** Summary and Decide follow Thresholds!J by formula, but nothing in Excel ties J17 to Data!N83. They agree because Python writes both from the same list. If somebody pasted a corrected quarter into Data, the lines would move and Latest, the rating, Summary and the Decide headline would not. That may be intended; it is the one hop in the chain that is not live.
- **The Thresholds tab's Series column is clipped in Excel.** Column A is 15 wide and B is never empty, so row 17 shows *Credit card - Non* (the picture above). The three sources of one measure read the same there, so a reader cannot tell the rows apart on that tab. On Summary, H7 and H8 show *Not in this workbool*, the last letter cut off.
- **The cross-bank comparison beside this figure is mostly policy, and the warning is on another tab.** Decide says *KeyBank is 0.68 points higher than Peer group (15 banks)* and Summary shows *+0.68*. At 30 June 2026, 10 of the 16 roster banks filed zero card nonaccrual (counted here from the FDIC call for every filer). They report late card loans as 90+ still accruing instead. The workbook says so only on the Sources tab. KeyBank's *5 High* is against its own history and is not affected.
- **The FDIC's dictionary labels both fields "(YTD, $)".** Both are quarter-end balances, not year-to-date, and both are in thousands, as the 4,295-bank match against the filed $000 lines shows.

6 · What I got wrong

- I expected the FDIC's definitions file to name the Call Report line for each field. It does not, so the field-to-line answer had to come from the numbers: the every-bank check above.
- The first Excel read printed `0.69081329478333975` and the CSV says `0.6908132947833397`. Different text, the same number: .NET prints 17 digits, Python the shortest that round-trips. I checked by parsing both before writing "diff 0".
- `read_workbook.ps1` first passed Excel a relative output folder. Excel resolved it against its own folder and the picture export failed (*STG_E_PATHNOTFOUND*). It now resolves the path first. Its first successful run also recorded PowerShell's stray output in the list of pictures; fixed.
- The comparability tie-out's capture script needs `pdftoppm` and `pdfplumber`, which are not on this machine. `capture.py` here does the same cuts and rings with PyMuPDF.

7 · What this does not prove

- **One figure, one bank, one quarter.** The other 94 series and the other 55 quarters of this one (2012Q3 to 2026Q1) come through the same code and are assumed right because of that. That is an inference, not something this check ran.
- **Not the firm's own build.** This workbook was built with peers switched off, from series CSVs a `peers build` wrote earlier the same evening from a cache pulled at 10:58 that morning. `book books\consumer-public.json`, which runs the peers build itself, was not run. Step 2 above reads that build the same way.
- **Not the rating.** *5 High* depends on the lines (median, typical move, the settings on Decide). Those are judgements, not filed figures, and nothing here ties them.

- **Not the peer group's 0.01 or the +0.68 difference.** Only KeyBank's own figure was tied.
- **Field-to-line for one quarter only.** The every-bank check is for 30 June 2026. The FDIC's definitions say both fields were wider before 2001. This series starts in 2012Q3, but other quarters were not checked. 18 FDIC rows have no match in the FFIEC bulk file (17 with both fields blank, one with both 0), and one FFIEC filer (State Bank Northwest, cert 2945) has no FDIC row. Not looked into.
- **Amendments.** The filing says *Last updated 7/30/2026*, and the FDIC's data is index `risview_20260819185831` (19 Aug 2026). An amendment after that would be in today's filing and not in the FDIC's data. Today's XBRL agrees with the API on both lines, so no amendment has touched them.
