From the master database's work list to the data mart

Workpaper Studio · walked through the screens on 2 November 2026 · synthetic people and data · the limit and method are fictional demonstrations

The master database says what to test. Studio opens each line as a case, already filled with what the database knows. People do the work, and every released case, every answer with its state, lands in a data mart where results can be read across cases.

The route

A red ring marks the control each step is about. Where the thing to read is small, a close-up is shown first and the full screen after it.

Set who can do what

1. Read or change the access levels

ADMIN (M. OKAFOR)

Do. Go to **Access**. Each column is one of this organization's levels; tick what it may do. Add a level or a person in the last column or row, then **Save**.

A correct screen. The levels and people as the organization set them, additional controls (such as a second approver for limits), and the fixed controls: nobody reviews work they entered or approves a tool they proposed, and every action is logged.

PERMISSION	PREPARER	REVIEWER	TOOL DESIGNER	TOOL APPROVER	ADMIN	NEW LEVEL
Start cases	☑	☐	☐	☐	☐	☐
Edit case entries	☑	☐	☐	☐	☐	☐
Submit for review	☑	☐	☐	☐	☐	☐
Answer review points	☑	☐	☐	☐	☐	☐
Record exceptions	☑	☐	☐	☐	☐	☐
Raise review points	☐	☑	☐	☐	☐	☐
Clear review points	☐	☑	☐	☐	☐	☐
Return cases	☐	☑	☐	☐	☐	☐
Acknowledge exceptions	☐	☑	☐	☐	☐	☐
Approve cases	☐	☑	☐	☐	☐	☐
Release cases	☐	☑	☐	☐	☑	☐
View all cases	☐	☑	☐	☐	☑	☐
Load work lists	☐	☐	☐	☐	☑	☐
Propose tools	☐	☐	☑	☐	☐	☐
Approve tools	☐	☐	☐	☑	☐	☐
Set limits	☐	☐	☐	☐	☑	☐
Manage access	☐	☐	☐	☐	☑	☐
New level name						e.g. QC lead

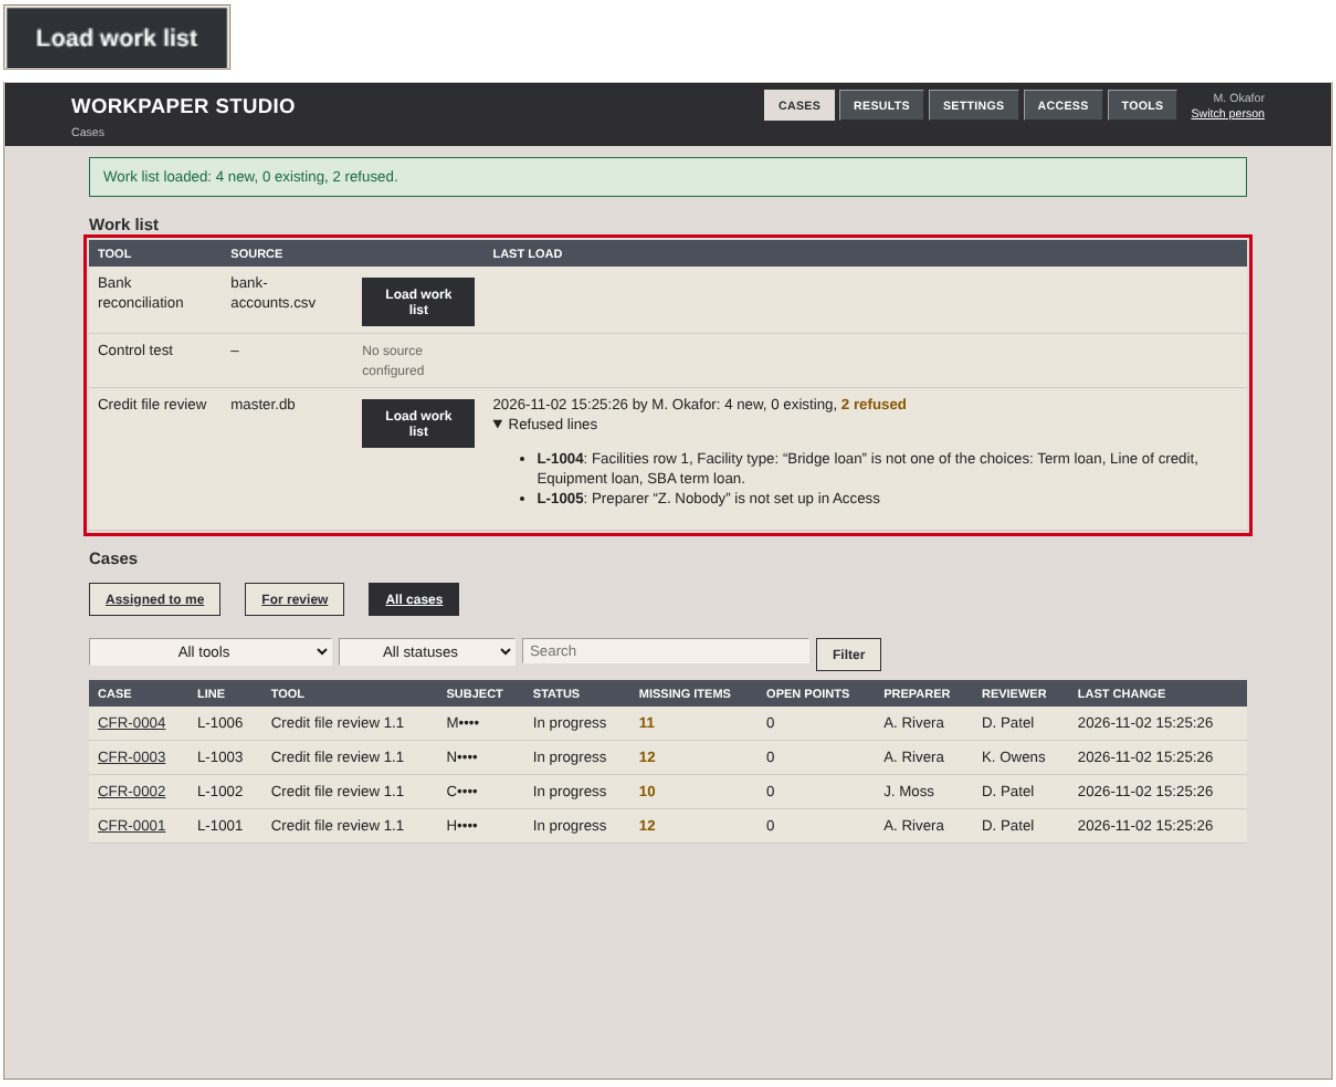

Load the work

2. Load the work list from the master database

ADMIN

Do. On **Cases**, under *Work list*, click **Load work list** on the tool's row.

A correct screen. A green banner counts what happened: loaded, already here, refused. Open *Refused lines* for each line's reason. Here one line names a facility type the tool's list does not have, and one names a preparer nobody has heard of. The master database is only read.

Do the work

3. Pick a case from Assigned to me

PREPARER (A. RIVERA)

Do. Sign in as the preparer. **Assigned to me** lists the lines the master database gave you, with the line number it uses.

A correct screen. Only your own cases. Filter by tool, status, or search by line, case, subject or person.

CASE	LINE	TOOL	SUBJECT	STATUS	MISSING ITEMS	OPEN POINTS	PREPARER	REVIEWER	LAST CHANGE
CFR-0004	L-1006	Credit file review 1.1	M••••	In progress	11	0	A. Rivera	D. Patel	2026-11-02 15:25:26
CFR-0003	L-1003	Credit file review 1.1	N••••	In progress	12	0	A. Rivera	K. Owens	2026-11-02 15:25:26
CFR-0001	L-1001	Credit file review 1.1	H••••	In progress	12	0	A. Rivera	D. Patel	2026-11-02 15:25:26

4. Open it: what the database knew is already filled in

PREPARER

Do. Click the case.

A correct screen. Tester, reviewer, quarter, borrower, security and the facilities are already there, and the strip counts only what is left (12 here). Everything else is the same as a case started by hand.

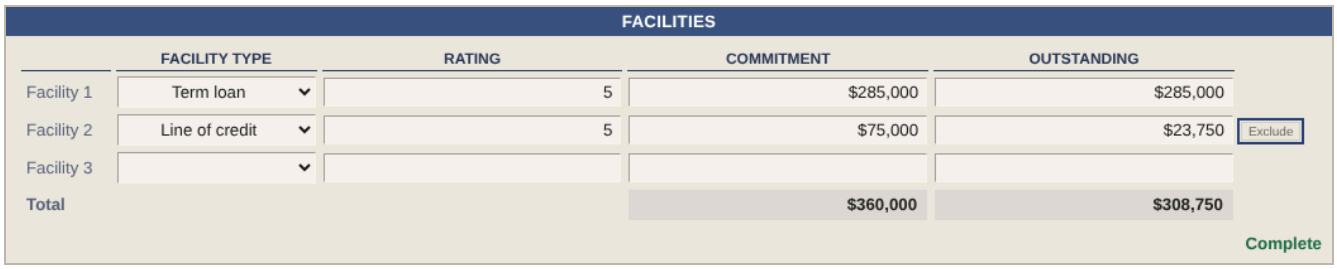

5. Correct a value the master database got wrong

PREPARER

Do. Type over it, like any entry.

A correct screen. The new value is kept and logged old → new. It stays marked as changed from the master database, all the way to the data mart (see step 8). Nothing is overwritten quietly.

Release

6. Finish, review, approve and release as before

PREPARER, THEN REVIEWER

Do. Complete the questions and analysis, record the exception, submit. The reviewer acknowledges it, approves and releases (the first procedure covers each step).

A correct screen. Outputs now lists four released files: the data feed (JSON and CSV), the workbook, and **answers-row.csv**, every answer of the case in one row, the shape a master table loads.

FILE	SHA-256	WRITTEN
CFR-0001.answers-row.csv	7af83a5b29cd3ede	2026-11-02 15:25:34
CFR-0001.feed.csv	3b2c88fb49675fb1	2026-11-02 15:25:34
CFR-0001.feed.json	c049484db66310e1	2026-11-02 15:25:34
CFR-0001.xlsx	ba7e13bb178a6f4c	2026-11-02 15:25:34

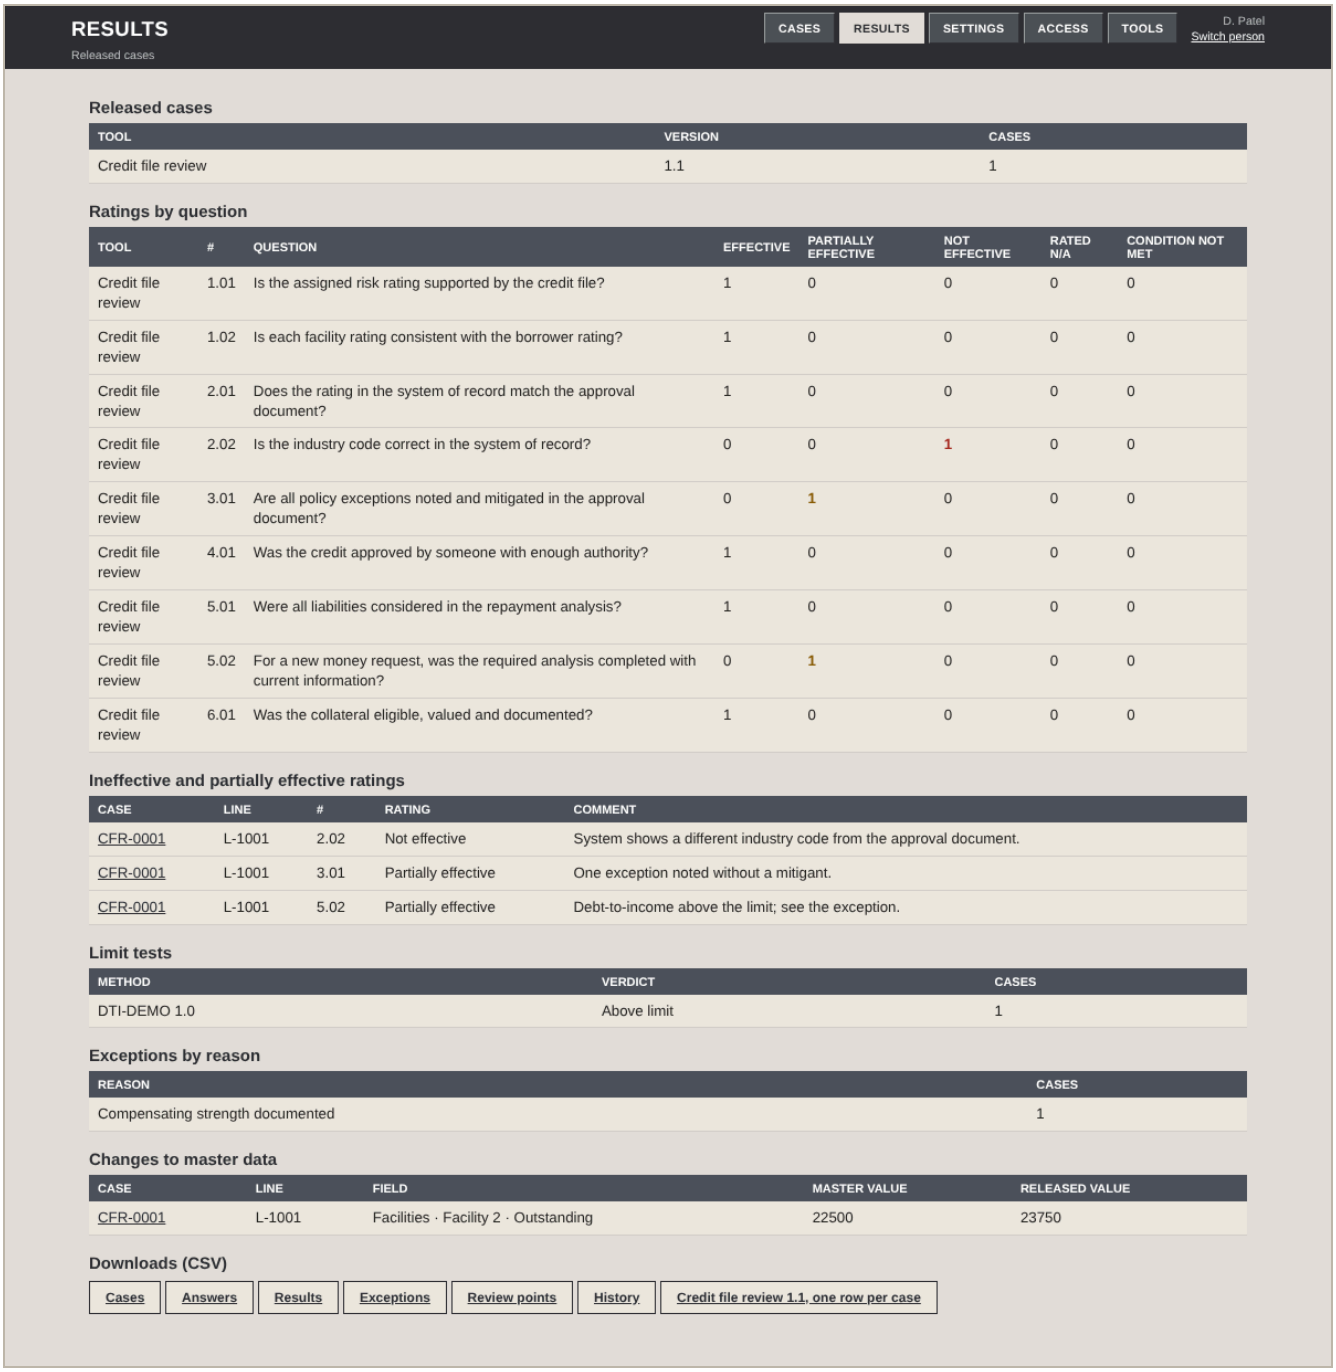

See the results

7. Read the results across cases

ANYONE WITH ACCESS

Do. Click **Results**.

A correct screen. From the data mart, across released cases: ratings by question; every ineffective or partially effective rating with its comment; limit tests; exceptions by reason; changes to master data. **Downloads (CSV)** gives each table.

RESULTS

Released cases

CASES | RESULTS | SETTINGS | ACCESS | TOOLS

Released cases

TOOL	VERSION	CASES
Credit file review	1.1	1

Ratings by question

TOOL	#	QUESTION	EFFECTIVE	PARTIALLY EFFECTIVE	NOT EFFECTIVE	RATED N/A	CONDITION NOT MET
Credit file review	1.01	Is the assigned risk rating supported by the credit file?	1	0	0	0	0
Credit file review	1.02	Is each facility rating consistent with the borrower rating?	1	0	0	0	0
Credit file review	2.01	Does the rating in the system of record match the approval document?	1	0	0	0	0
Credit file review	2.02	Is the industry code correct in the system of record?	0	0	1	0	0
Credit file review	3.01	Are all policy exceptions noted and mitigated in the approval document?	0	1	0	0	0
Credit file review	4.01	Was the credit approved by someone with enough authority?	1	0	0	0	0
Credit file review	5.01	Were all liabilities considered in the repayment analysis?	1	0	0	0	0
Credit file review	5.02	For a new money request, was the required analysis completed with current information?	0	1	0	0	0
Credit file review	6.01	Was the collateral eligible, valued and documented?	1	0	0	0	0

Ineffective and partially effective ratings

CASE	LINE	#	RATING	COMMENT
CFR-0001	L-1001	2.02	Not effective	System shows a different industry code from the approval document.
CFR-0001	L-1001	3.01	Partially effective	One exception noted without a mitigant.
CFR-0001	L-1001	5.02	Partially effective	Debt-to-income above the limit; see the exception.

Limit tests

METHOD	VERDICT	CASES
DTI-DEMO 1.0	Above limit	1

Exceptions by reason

REASON	CASES
Compensating strength documented	1

Changes to master data

CASE	LINE	FIELD	MASTER VALUE	RELEASED VALUE
CFR-0001	L-1001	Facilities · Facility 2 · Outstanding	22500	23750

Downloads (CSV)

Cases | Answers | Results | Exceptions | Review points | History | Credit file review 1.1, one row per case

8. Trace where each value came from

ANYONE

Do. Open the case's **History**.

A correct screen. The oldest entries, at the foot of the list, are *loaded*: one per value, each naming the master database and the line. Every change after that is someone's, with old and new.

#	WHEN	WHO	WHAT	DETAIL
9	2026-11-02 15:25:26	M. Okafor	loaded	g/facilities/0/commit: **285000** from master database (master.db, table credit_lines), line L-1001
