The book walkthrough: one command, then Excel

What the firm asked for, 14 Oct 2026: *"i want you to make it work so i can generate this workbook at work with the script, it should be debugged and walked through and tied out."*

This is the walk: the workbook built the way it is built at work, then used in Excel 16 the way a person uses it (clicking the buttons, typing in the yellow row, saving, closing and opening it again), and every answer read back from Excel and set beside an answer written down beforehand from the source files.

1. Build

From `threshold-engine/`:

```
python -m threshold_engine peers pull --cache books/ind_cache --first 2006Q1 --last 2026Q2 --products "Cre
dit card" Mortgage "Home equity" "Other consumer" Auto --delinquency yes --mergers 2005-01-01
python -m threshold_engine book books/consumer-public.json consumer-credit.xlsx
```

The walkthrough ran the second command on a copy of the book whose only change is where the cache is (`prepare.py`): the cache pulled on 14 Oct 2026 was used rather than pulled again. Expected: `Wrote consumer-credit.xlsx: 164 series, 143 quarters; open it on Summary, decide on Decide`. It took 21 min 40 s on the round 3 run of 19 Oct 2026, with the full test suite running beside it (8 min 48 s alone before round 3), almost all of it the peers build reading the cache.

2. The steps

The steps are cumulative, as a session is: what is typed in one step is still there in the next.

One set of lines per product and measure (the firm, 15 Oct 2026: *"we don't need to set thresholds on all 3, we need to use all 3 to set appropriate thresholds"*): Decide has 35 rows, and each row's **Lines set from** picks the source whose history sets its lines.

Step	What you do	What it shows
B1	Open the workbook	It opens on Summary; the tabs in round 3's order (Peers data, Peers delinquency data, Internal, Internal data, Assess, Chart and both workings tabs hidden); two slicers, one button each; Decide shows the first product and measure, no source picked, nothing decided; the counts, the Large banks strip, Needs your attention empty, the pack line on Peers, Decide and Signals, Reporting changes last on Sources; no links, no errors
B2	Read Summary and Lines by source	Every series Summary shows: its latest value, a dash where its rating goes; every series' own lines equal the reference; the backtest folded into Lines by source for two series, one too short to test
B3	On Decide, click Credit card and Nonaccrual, and pick KeyBank under Lines set from	One row; the lines are KeyBank's own; every source rated on them, beside what its own history would give; Thresholds holds the same
B4	Type 3.5 under How rare High is (z)	High's line moves for every source of the row; Thresholds and Summary follow
B5	Leave out 2012Q3 to 2013Q4, the period Decide suggests, with a reason	KeyBank's lines move as the reference says, the industry's own lines do not; Assess lists the period under KeyBank's series, whole
B6, B6b	Clear the reason; type it back	Refused, in words, on Decide and Thresholds; then the lines as in B5

Step	What you do	What it shows
B7	Accept these lines, with a note	Decided: 1 of 35; the decision on Thresholds, and on Lines by source beside KeyBank only
B8	Click Auto and Net charge-offs, and pick Industry (every bank)	KeyBank's life-to-date history rated on the lines the industry's longer history gives
B9	Click Mortgage and Net charge-offs, and pick Industry (every bank)	Refused, with the number that would fix it
B10	Save, close, open again	Every pick, decision and setting still there, and the lines with them; Summary's counts and Needs your attention
B11 to B13	On Peers: Regionals only; Every peer with JPMorgan off; JPMorgan back	The peer group's latest values are the composite over the banks left in, and the pack line names those switched off
B14	Open Signals	The controls and Picked, the pack line, where the dollars are, two fit tables

A step passes when every cell it reads says what `steps.json` says: a number within 1e-9, text exactly.

3. How it was run

```
python docs/walkthrough-book/prepare.py PATH-TO-CACHE
python -m threshold_engine book docs/walkthrough-book/out/book.json docs/walkthrough-book/out/consumer-cre
dit.xlsx
python docs/walkthrough-book/expected.py docs/walkthrough-book/out/book.json
copy docs\walkthrough-book\out\consumer-credit.xlsx docs\walkthrough-book\out\walk.xlsx
powershell -NoProfile -ExecutionPolicy Bypass -File docs\walkthrough-book\walk.ps1
python docs/walkthrough-book/compare.py
```

`expected.py` writes the answers from the series CSVs and `scale.py`, never from the workbook. `walk.ps1` does each step in Excel through Excel's own automation and reads each answer back. `compare.py` writes `RESULT.md`.

And, separately, that the file opens without Excel repairing it:

```
powershell -NoProfile -ExecutionPolicy Bypass -File tools\check_slicers_in_excel.ps1 -Path docs\walkthroug
h-book\out\consumer-credit.xlsx -Sheet Decide -Table Decisions -Shapes 3 -Expect "Slicer_Product=Credit ca
rd|Slicer_Measure=Net charge-offs" -SwitchCache Slicer_Measure -SwitchTo "Gross charge-offs"
```

"No errors" in B1 means none a reader can see: on the visible tabs, outside hidden rows and columns. The rest are counted by kind and are all #N/A, the gap a chart leaves where a quarter has no value (on the run of 15 Oct 2026: Assess 169, Chart 8,470, Decide 249, Peers workings 1,556).

4. What it does not prove

- The peer tabs are counted for errors and links (B1) but their numbers are not checked against a reference here; `tests/test_peers*.py` hold them.
- One series is tied to the filing (`../tie-out/keybank-card-nonaccrual-2026-10-14/`); the other 104 rest on the same code and the reference, not on a filing each.
- Three of the 35 rows have a source picked in the walk (Credit card nonaccrual, Auto and Mortgage net charge-offs); the other 32 are read blank (a dash) on Summary, and every source's own lines are read for all 105 on Lines by source.

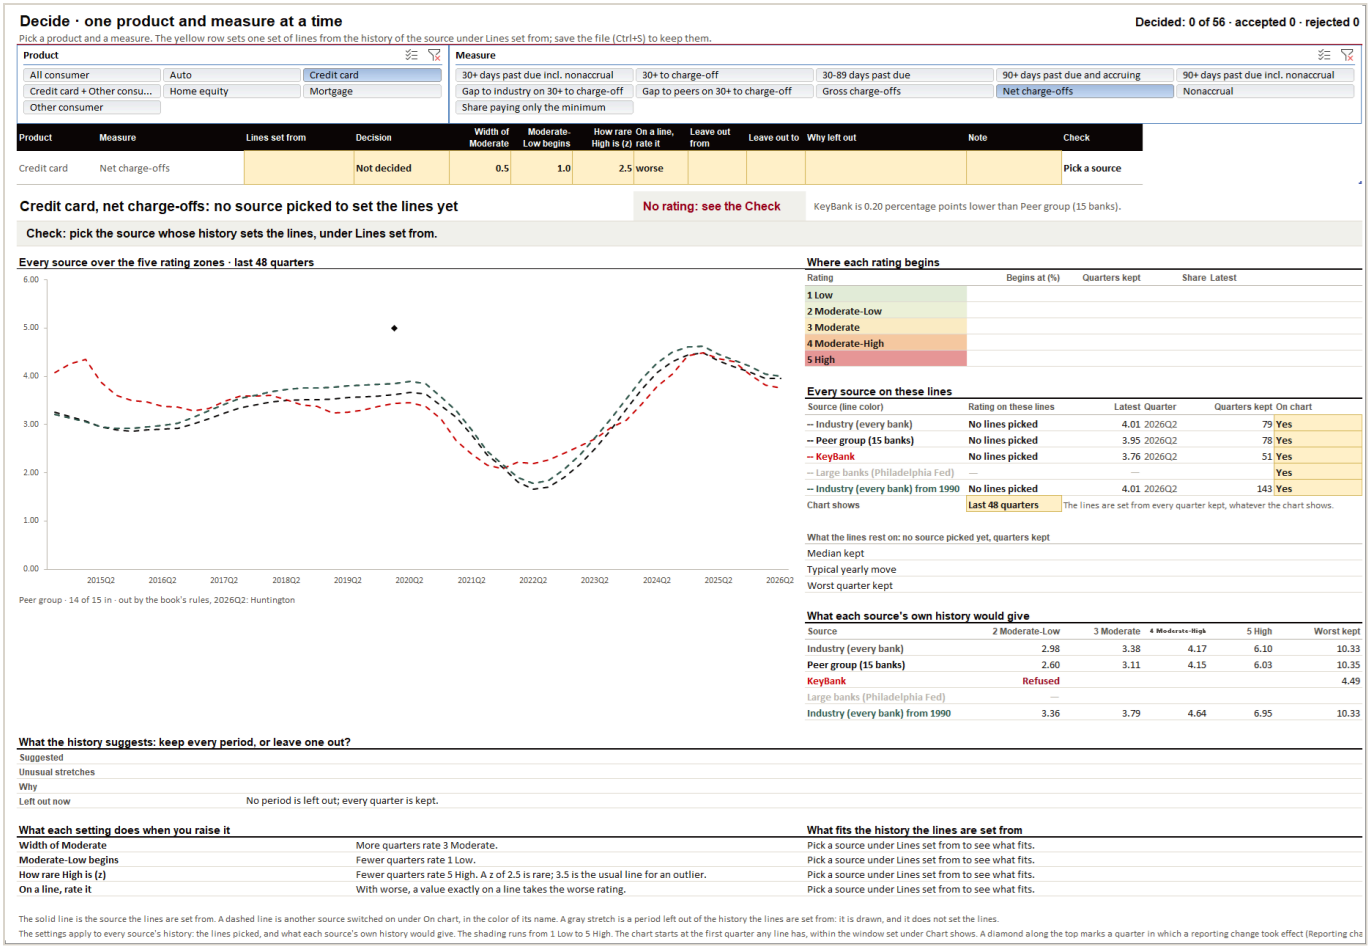

- Thresholds' latest value is written by the build, not a live formula on Data: pasting a corrected quarter into Data moves the lines but not the latest value (found by the tie-out).

5. The result

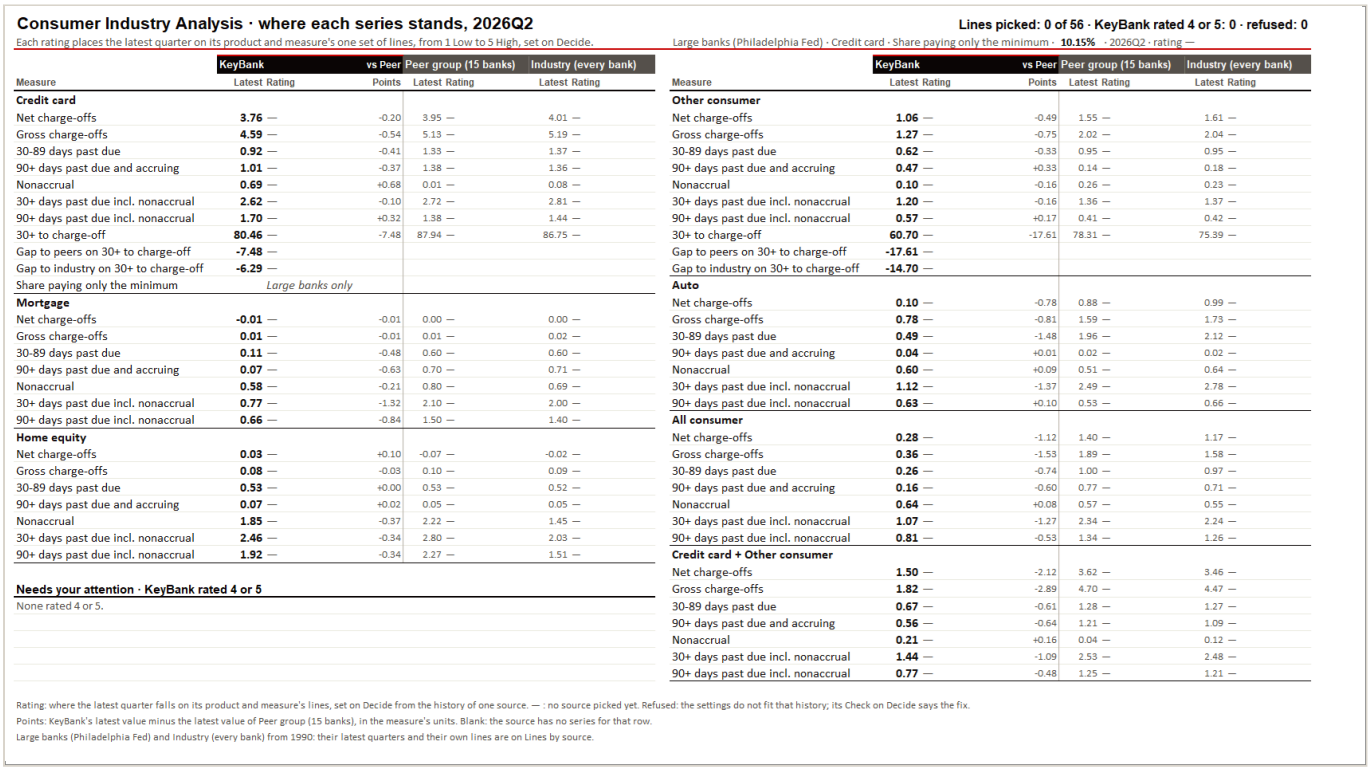

2465 of 2465 reads as expected.

Step	What you do	Reads as expected
B1	Open the workbook as built	49 of 49
B2	Read Summary, and every source's own lines on Lines by source	1972 of 1972
B3	On Decide, click Credit card and Nonaccrual, and pick KeyBank under Lines set from	59 of 59
B4	Type 3.5 under How rare High is (z), in the yellow row	55 of 55
B5	Leave out 2012Q3 to 2013Q4, the period Decide suggests, with a reason	41 of 41
B6	Clear the reason	3 of 3
B6b	Type the reason back	26 of 26
B7	Pick Accept these lines and write a note	4 of 4
B8	Click Auto and Net charge-offs, and pick Industry (every bank) under Lines set from	31 of 31
B9	Click Mortgage and Net charge-offs, and pick Industry (every bank)	25 of 25
B10	Save (Ctrl+S), close Excel, open the file again	40 of 40
B11	On Peers, set Banks in the pack to Regionals only	11 of 11
B12	Set Banks in the pack back to Every peer, and JPMorgan's cell to No	11 of 11
B13	Set JPMorgan's cell back to Pack	14 of 14
B14	Open Signals	124 of 124

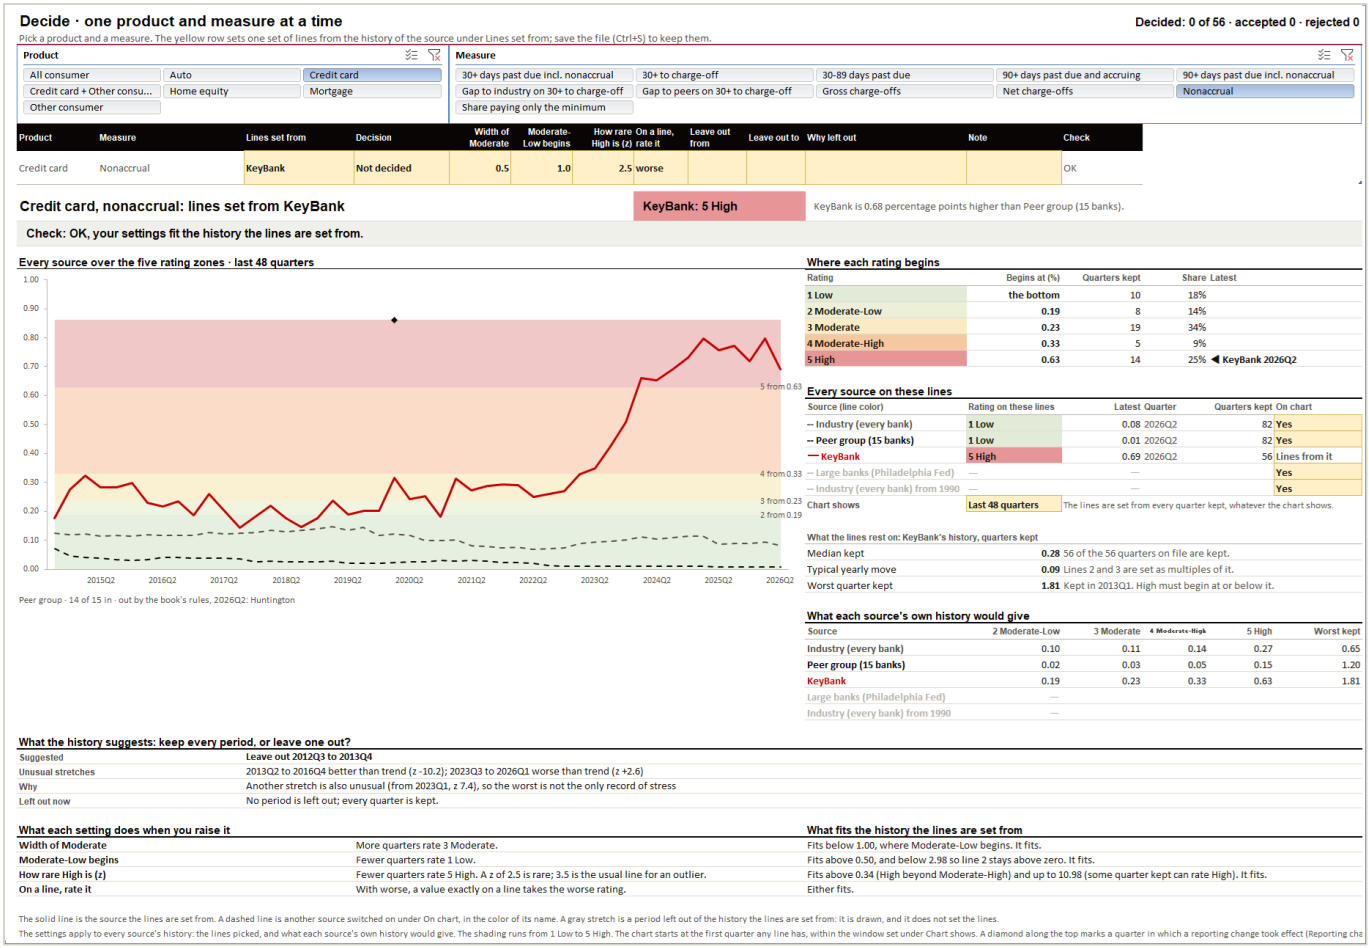

6. What Excel showed

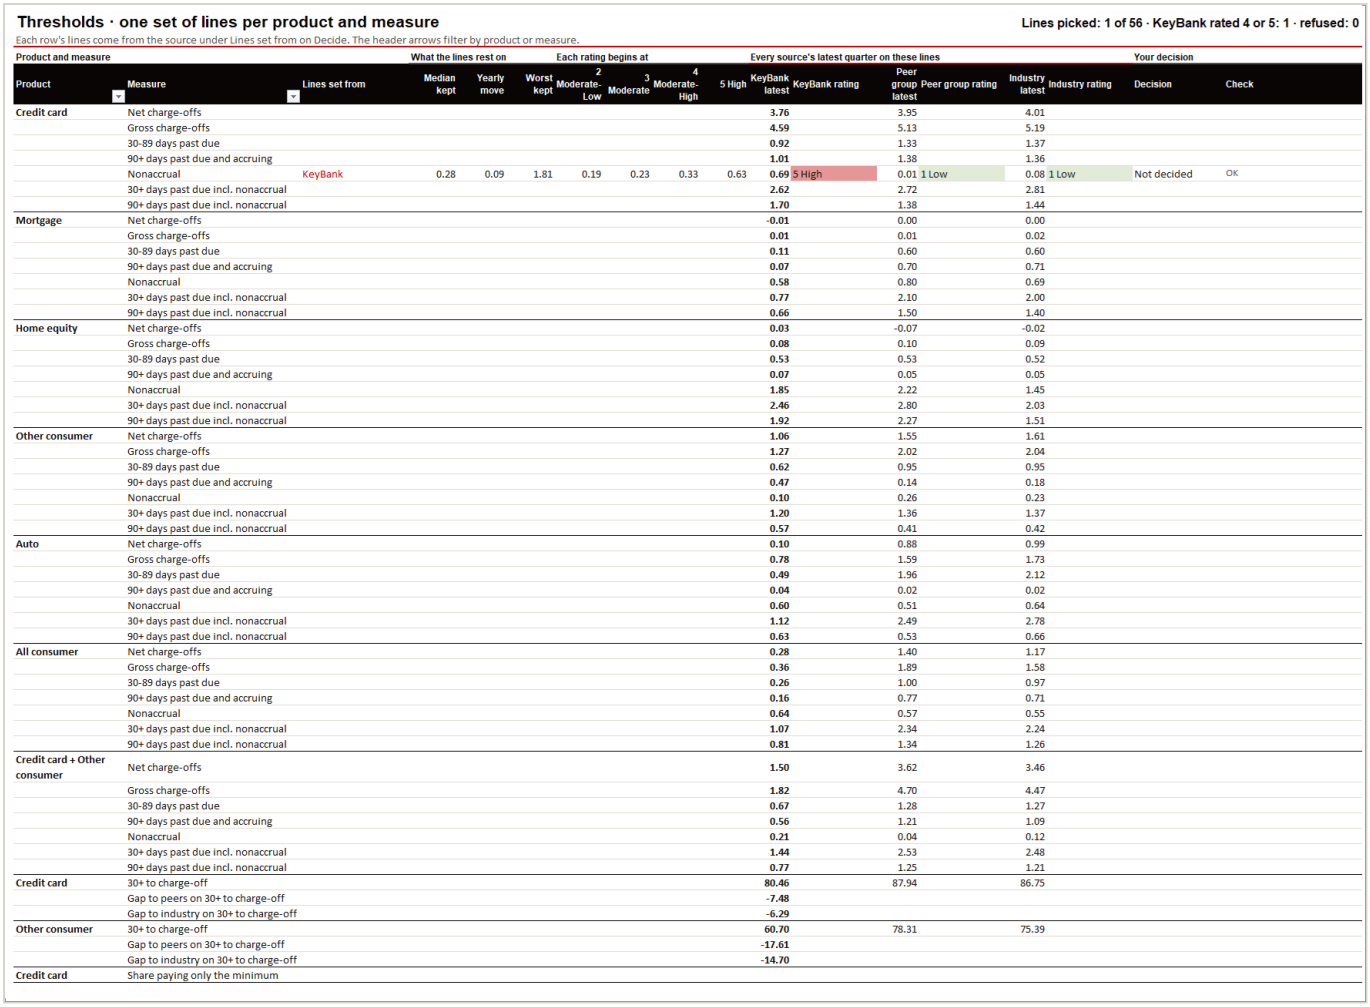

B1 · Open the workbook as built (Decide tab, photographed by Excel during the walk)

B1 · Open the workbook as built (Summary tab, photographed by Excel during the walk)

B3 · On Decide, click Credit card and Nonaccrual, and pick KeyBank under Lines set from (Decide tab, photographed by Excel during the walk)

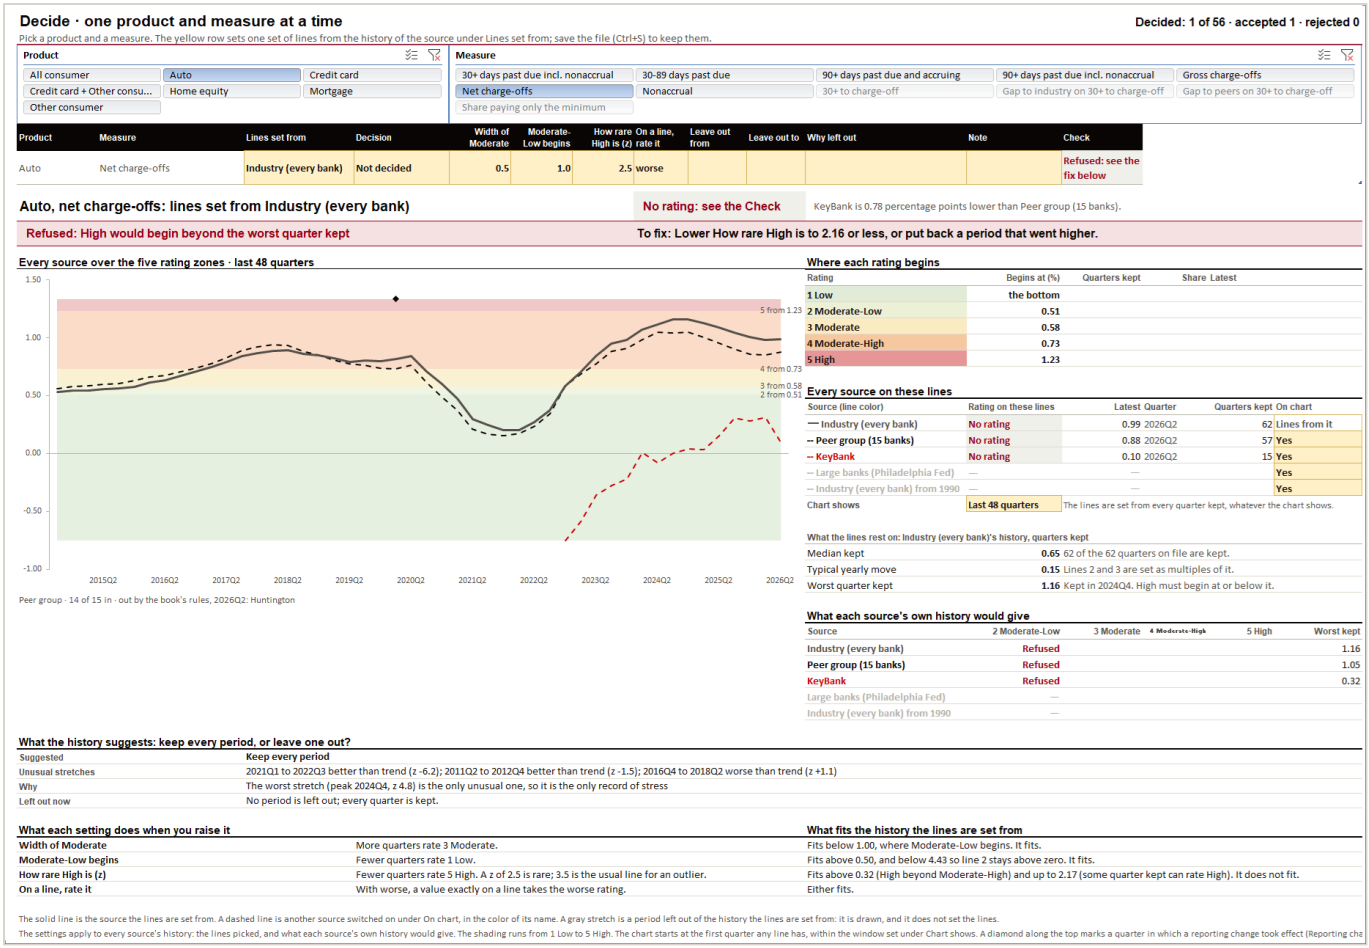

Thresholds · one set of lines per product and measure

Lines picked: 1 of 56 · KeyBank rated 4 or 5: 1 · refused: 0

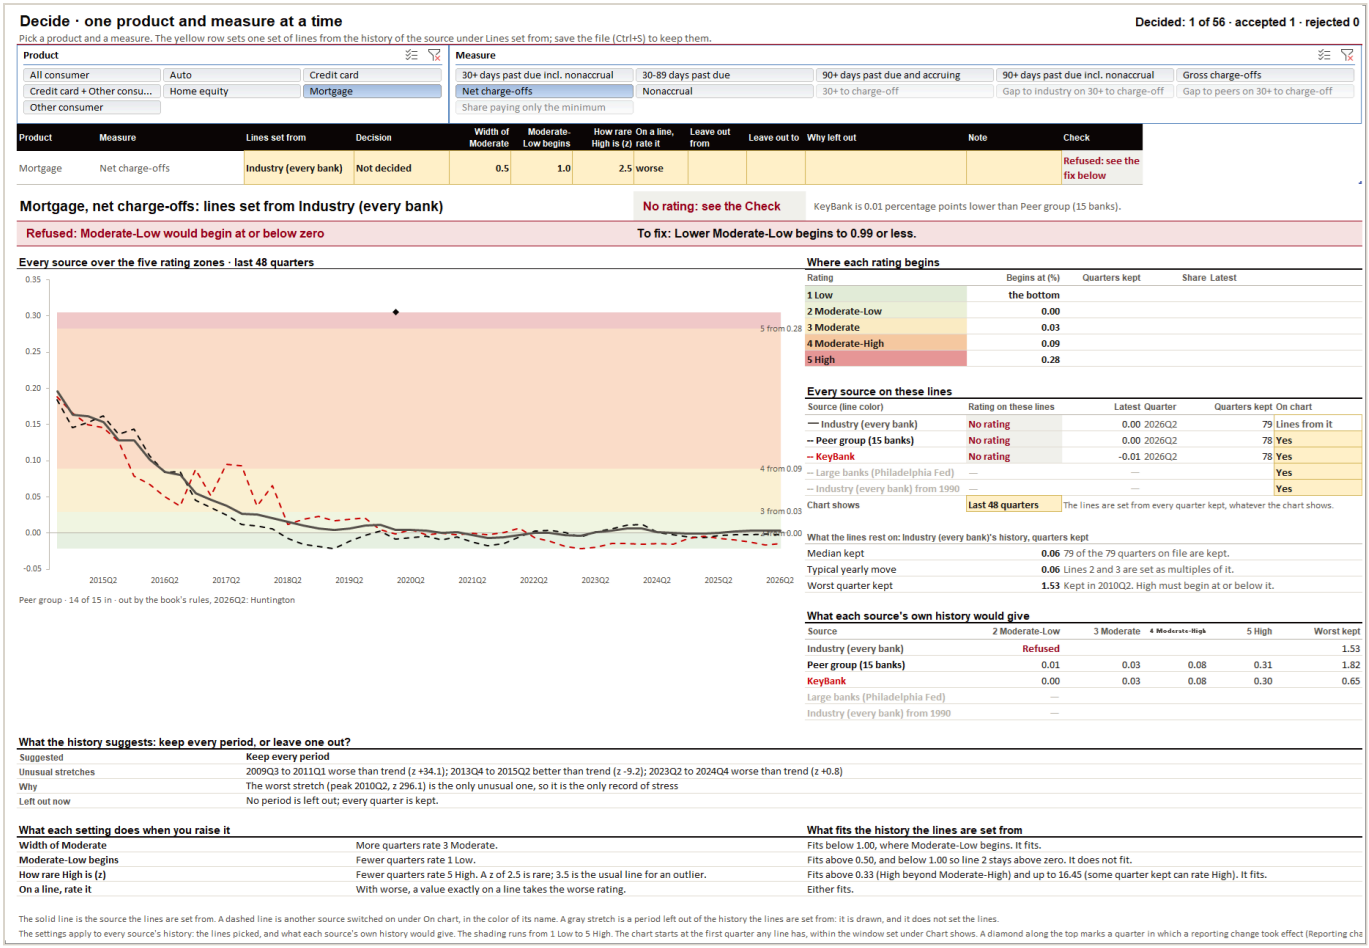

Each row's lines come from the source under Lines set from on Decide. The header arrows filter by product or measure.

Product and measure			What the lines rest on		Each rating begins at					Every source's latest quarter on these lines					Your decision	
Product	Measure	Lines set from	Median kept	Yearly move	Worst kept	2 Moderate-Low	3 Moderate	4 Moderate-High	5 High	KeyBank latest	KeyBank rating	Peer group latest	Peer group rating	Industry latest	Industry rating	Decision	Check
Credit card	Net charge-offs									**3.76**		3.95		4.01			
	Gross charge-offs									**4.59**		5.13		5.19			
	30-89 days past due									**0.92**		1.33		1.37			
	90+ days past due and accruing									**1.01**		1.38		1.36			
	Nonaccrual	KeyBank	0.28	0.09	1.81	0.19	0.23	0.33	0.63	**0.69**	5 High	0.01	1 Low	0.08	1 Low	Not decided	OK
	30+ days past due incl. nonaccrual									**2.62**		2.72		2.81			
	90+ days past due incl. nonaccrual									**1.70**		1.38		1.44			
Mortgage	Net charge-offs									**-0.01**		0.00		0.00			
	Gross charge-offs									**0.01**		0.01		0.02			
	30-89 days past due									**0.11**		0.60		0.60			
	90+ days past due and accruing									**0.07**		0.70		0.71			
	Nonaccrual									**0.58**		0.80		0.69			
	30+ days past due incl. nonaccrual									**0.77**		2.10		2.00			
	90+ days past due incl. nonaccrual									**0.66**		1.50		1.40			
Home equity	Net charge-offs									**0.03**		-0.07		-0.02			
	Gross charge-offs									**0.08**		0.10		0.09			
	30-89 days past due									**0.53**		0.53		0.52			
	90+ days past due and accruing									**0.07**		0.05		0.05			
	Nonaccrual									**1.85**		2.22		1.45			
	30+ days past due incl. nonaccrual									**2.46**		2.80		2.03			
	90+ days past due incl. nonaccrual									**1.92**		2.27		1.51			
Other consumer	Net charge-offs									**1.06**		1.55		1.61			
	Gross charge-offs									**1.27**		2.02		2.04			
	30-89 days past due									**0.62**		0.95		0.95			
	90+ days past due and accruing									**0.47**		0.14		0.18			
	Nonaccrual									**0.10**		0.26		0.23			
	30+ days past due incl. nonaccrual									**1.20**		1.36		1.37			
	90+ days past due incl. nonaccrual									**0.57**		0.41		0.42			
Auto	Net charge-offs									**0.10**		0.88		0.99			
	Gross charge-offs									**0.78**		1.59		1.73			
	30-89 days past due									**0.49**		1.96		2.12			
	90+ days past due and accruing									**0.04**		0.02		0.02			
	Nonaccrual									**0.60**		0.51		0.64			
	30+ days past due incl. nonaccrual									**1.12**		2.49		2.78			
	90+ days past due incl. nonaccrual									**0.63**		0.53		0.66			
All consumer	Net charge-offs									**0.28**		1.40		1.17			
	Gross charge-offs									**0.36**		1.89		1.58			
	30-89 days past due									**0.26**		1.00		0.97			
	90+ days past due and accruing									**0.16**		0.77		0.71			
	Nonaccrual									**0.64**		0.57		0.55			
	30+ days past due incl. nonaccrual									**1.07**		2.34		2.24			
	90+ days past due incl. nonaccrual									**0.81**		1.34		1.26			
Credit card + Other consumer	Net charge-offs									**1.50**		3.62		3.46			
	Gross charge-offs									**1.82**		4.70		4.47			
	30-89 days past due									**0.67**		1.28		1.27			
	90+ days past due and accruing									**0.56**		1.21		1.09			
	Nonaccrual									**0.21**		0.04		0.12			
	30+ days past due incl. nonaccrual									**1.44**		2.53		2.48			
	90+ days past due incl. nonaccrual									**0.77**		1.25		1.21			
Credit card	30+ to charge-off									**80.46**		87.94		86.75			
	Gap to peers on 30+ to charge-off									**-7.48**							
	Gap to industry on 30+ to charge-off									**-6.29**							
Other consumer	30+ to charge-off									**60.70**		78.31		75.39			
	Gap to peers on 30+ to charge-off									**-17.61**							
	Gap to industry on 30+ to charge-off									**-14.70**							
Credit card	Share paying only the minimum																

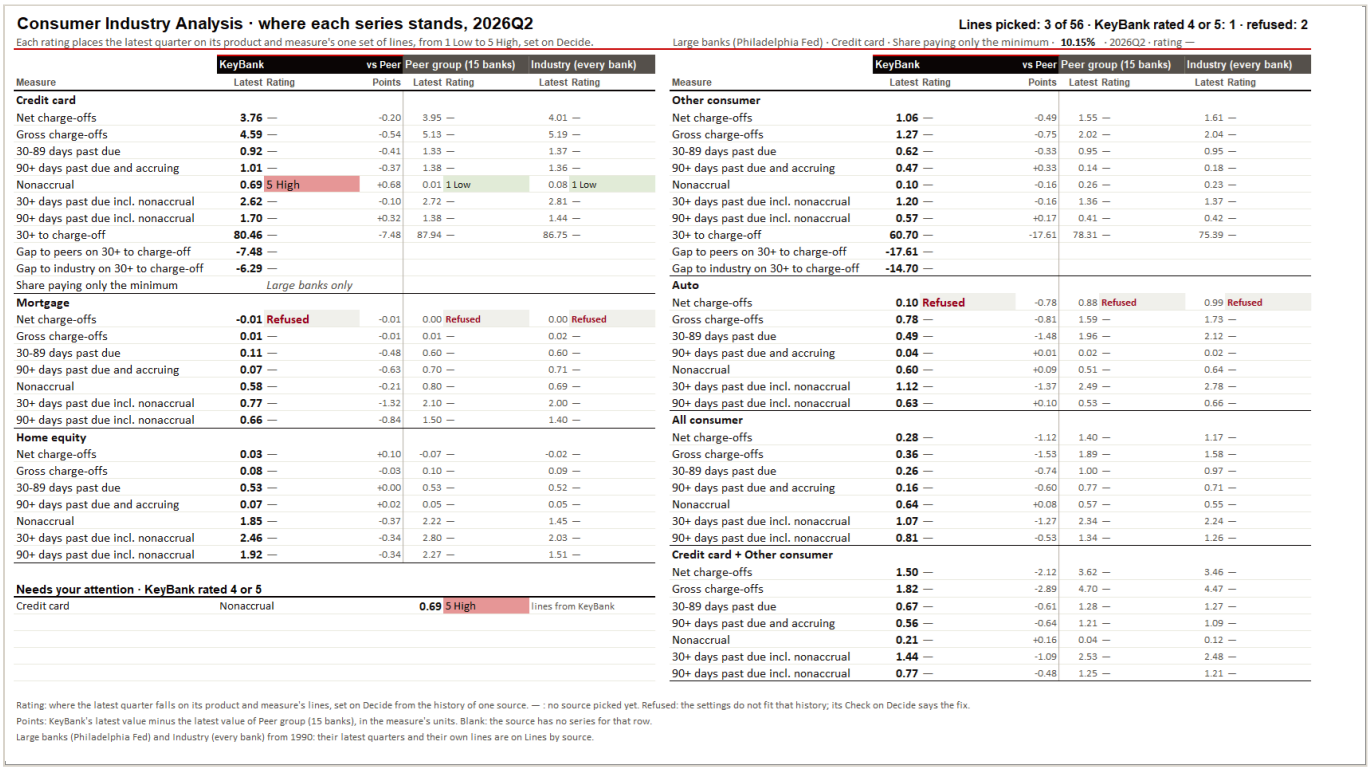

B3 · On Decide, click Credit card and Nonaccrual, and pick KeyBank under Lines set from (Thresholds tab, photographed by Excel during the walk)

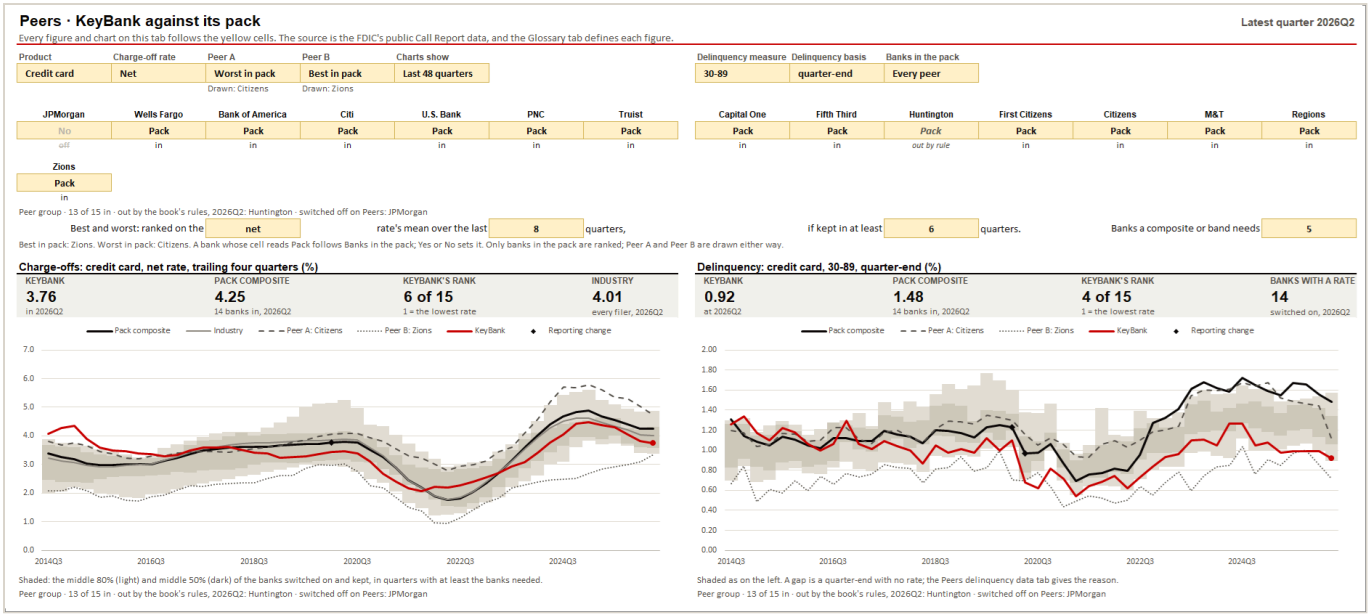

B8 · Click Auto and Net charge-offs, and pick Industry (every bank) under Lines set from (Decide tab, photographed by Excel during the walk)

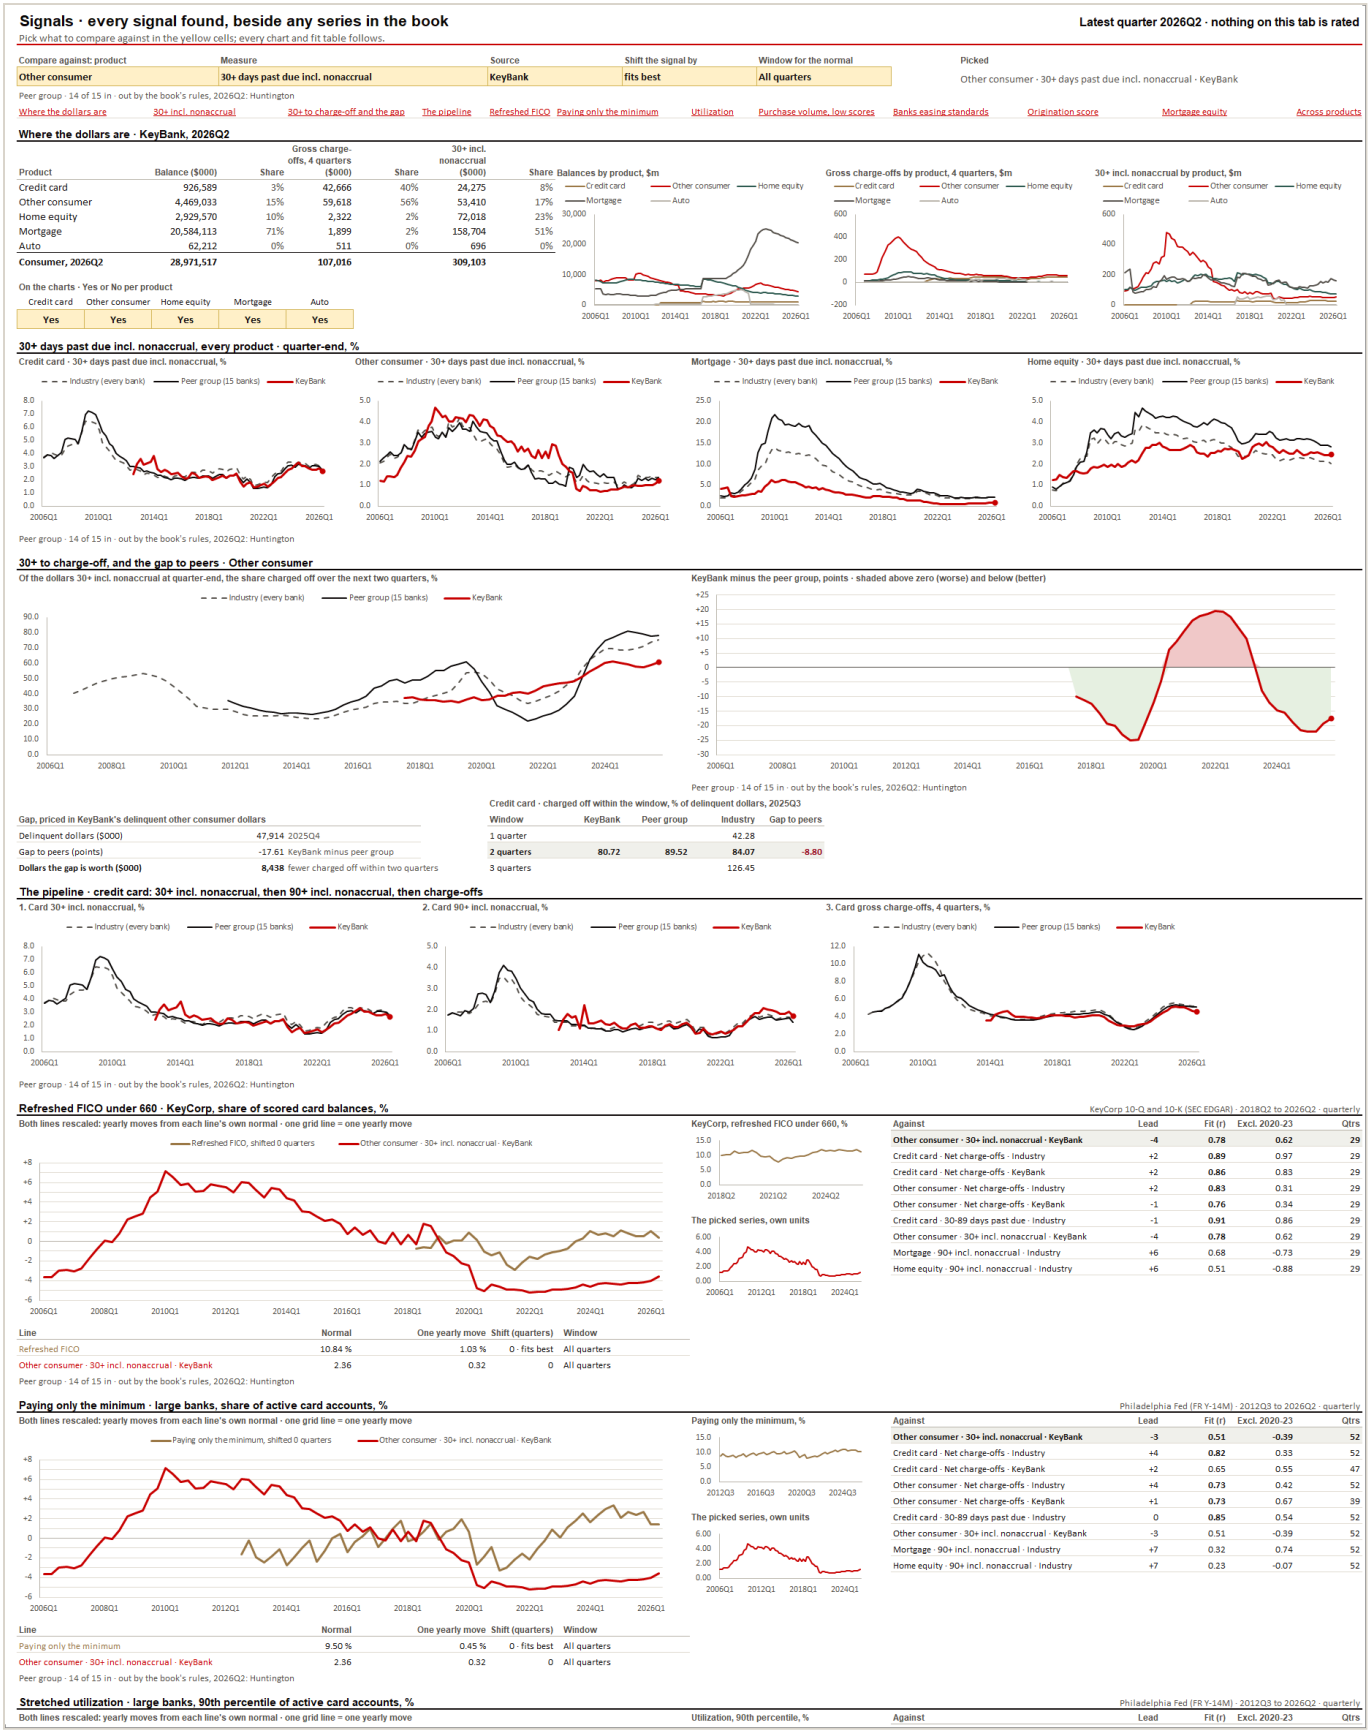

B9 · Click Mortgage and Net charge-offs, and pick Industry (every bank) (Decide tab, photographed by Excel during the walk)

B10 · Save (Ctrl+S), close Excel, open the file again (Summary tab, photographed by Excel during the walk)

B12 · Set Banks in the pack back to Every peer, and JPMorgan's cell to No (Peers tab, photographed by Excel during the walk)

B14 · Open Signals (Signals tab, photographed by Excel during the walk)
