Seven comparability questions, tied out against the filings

threshold-engine · KeyBank, N.A. (FDIC cert 17534) against its 15 peers and the industry · public data only · run 14 October 2026 · KeyBank's internal books were not used anywhere

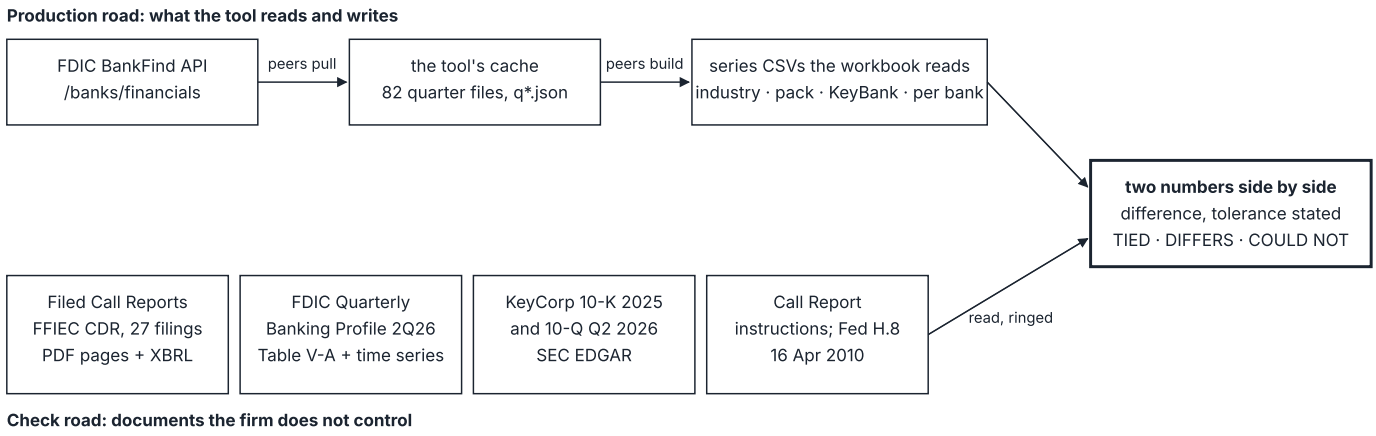

147 figures were put beside a document the firm does not control: 13 DIFFERS, 3 COULD NOT, 131 TIED.

The answer, gap by gap

Gap	Verdict on the gap	How big	What to do
1 · Government-guaranteed loans in 90+	**Real at KeyBank, about a third of its first-lien 90+. At the peers it could be most of mortgage 90+, but the filings only bound it.** The lines are RC-N items 11, 11.a and 11.b on today's form, not 10 and 10.a.	Rebooked GNMA loans 90+ come to 94% of first-lien 90+ accruing at U.S. Bank, 99% at Citizens, 103% at Wells Fargo; 63% industry-wide. These are upper bounds: the GNMA line also holds commercial loans. KeyBank, the one split that is public: about $5m of its $15.0m (one third), from KeyCorp's 10-Q.	Compare mortgage across banks on nonaccrual and charge-offs, not 90+ accruing. Do not subtract rebooked GNMA from a peer's mortgage 90+: the line is not split by loan type and can hold commercial loans. Where a 90+ figure is shown, put the GNMA share beside it as an upper bound.
2 · Nonaccrual is partly policy (cards)	**Real.** The Call Report lets a bank keep a late consumer loan accruing.	At 30 Jun 2026, 10 of 16 banks file zero card nonaccrual; Citizens has filed zero card 90+ accruing in every one of its 76 quarters and puts it all in nonaccrual.	Compare cards across banks on 90+ including nonaccrual (and 30+ including nonaccrual). Show nonaccrual alone and 90+ accruing alone only for KeyBank's own history.
3 · Card securitizations back on balance sheet, 2010Q1	**Real in the industry card series. Among the roster banks only PNC's card book jumps (+67%), and the jump rule already leaves it out.**	Industry card balances +69.1% in one quarter ($421.5bn to $712.8bn). About +0.9 pts on the industry card rate from the change in mix alone.	Treat 2010Q1 as a break in the industry card series: use it from 2010Q4, or label 2006 to 2010Q3 as excluding securitized cards. The pack composite already starts at 2010Q4.
4 · Industry total against peer median	**Real, and it depends on the product.** The tool's industry total is the FDIC's own at 2026Q2 (ties to the QBP); over the full history it strays in some quarters, mainly around affiliate mergers and in 2008–09 (gap 5).	Card and other consumer: within about 0.15 pts on average, but up to 1.3 pts apart in the 2009–11 stress. Auto: the industry is higher in every quarter, typically twice the median (1.3 to 2.9 times; 0.99% against 0.43% now). Home equity: 2.2 times the median at the 2009 peak.	Show both, as decided. For auto, anchor on the peer median and say why. Build the median in the tool: the band has no p50 yet.
5 · Mergers and acquired loans	**Real, two ways.** (a) The 25% jump rule misses smaller acquisitions. (b) The tool's industry series counts charge-offs twice when one bank absorbs an affiliate.	(a) 60 of 130 material acquisitions since 2006 (counted by acquirer, quarter and product) are not left out, up to 27% of a book (PNC buying BBVA USA, auto). (b) Six card quarters overcounted by $74m to $4.8bn; the industry card rate is up to +0.71 pts high for four quarters after each.	(a) Leave out windows around every quarter whose recorded acquisitions, added together, are 5% or more of the product. (b) In the merger quarter, take the absorbed bank's last year-to-date figure off the survivor's flow; test against the QBP's quarterly totals.

Gap	Verdict on the gap	How big	What to do
6 · Entity: KeyCorp 10-K against KeyBank's Call Report	**Small and fully explained**, with one definition gap.	Balances and charge-offs tie within $1m at both dates once two named items are added: education loans in discontinued operations ($205m, $182m) and residential mortgages held for sale ($149m, $204m). KeyCorp's "home equity" is $2.48bn larger than the Call Report's home equity lines.	In the internal import, name the two items as exclusions, and either split internal home equity into lines and loans or compare mortgage plus home equity together.
7 · Auto	**RC-C 6.c ties at 62,212; where the rest of direct auto is filed COULD NOT be settled from public data.**	6.c holds every consumer car-purchase loan, direct or indirect. KeyBank sold its indirect book in 2021Q3 (6.c fell from $3.80bn to $0.15bn; it kept $2.82bn of the notes). Only two peers file consumer leases: U.S. Bank (at most 56% of its consumer auto) and Bank of America (at most 16%); the lease line is not split by asset, so these are upper bounds.	On site, compare internal direct auto at 30 Jun 2026 with 62,212. If it is larger, map the internal segment's composition and entity before assigning the difference to any filed line: it may be loans the Call Report files in 6.d (boats, RVs, cash loans against a car already owned), or a difference of entity or internal definition. Set direct auto's thresholds on internal data, with peers as context only.

How the dots connect

Every figure travels two roads. The top road is how a number reaches the files the firm reads. The bottom road ends at a document the firm does not produce and cannot change: a bank's filed Call Report, the FDIC's published industry totals, KeyCorp's SEC filings, the regulators' own instructions. Only the bottom road makes this evidence rather than a second reading of the same feed.

The roster: 147 figures, by gap and verdict

Gap	DIFFERS	COULD NOT	TIED	Figures
1 · Government-guaranteed loans	1	0	36	37
2 · Card nonaccrual policy	0	0	36	36
3 · 2010 securitizations	1	0	2	3
4 · Industry against median	3	1	14	18
5 · Mergers	6	0	2	8
6 · KeyCorp against KeyBank	2	0	23	25
7 · Auto	0	2	18	20
All	**13**	**3**	**131**	**147**

Each figure is one comparison: the value on the tool's side, read where it says, against the value in an independent document. The DIFFERS and COULD NOT figures are the ones worth reading:

Verdict	Figure	Ours (the tool's side)	Source (not ours)	Difference
DIFFERS	KeyBank rebooked GNMA 90+ at 30 Jun 2026: filing against KeyCorp 10-Q	69.414 KeyBank Call Report 30 Jun 2026, RCFDK043 ($000 / 1,000)	59 KeyCorp 10-Q Q2 2026, Note 4 aging table footnote (c): $54 m commercial mortgage + $5 m residential	10.414 $m · tolerance two figures each rounded to $1m
	Not explained here. Item 11.b counts GNMA loans 'repurchased or eligible for repurchase'; the 10-Q footnote counts loans 'where Key has the right but not the obligation to repurchase'. Loans already bought back would be in the first and not the second. That is a reading of the two definitions, not a reconciliation.			
DIFFERS	Commercial banks' cards and other revolving plans: change 2009Q4 to 2010Q1 against the amount consolidated	285.798 FDIC API, BKCLASS N/NM/SM, LNCRCD + LNCONRP, 2010Q1 less 2009Q4 ($000 / 1e6)	322.3 Federal Reserve H.8, 16 Apr 2010, Notes on the Data (revised figure)	-36.502 $bn · tolerance different basis: see note
	Not the same quantity. The H.8 counts only what was consolidated, in the week ending 31 Mar 2010; the quarter's change also nets off that quarter's charge-offs (card net charge-offs alone were $18.7bn, QBP) and paydowns. The two agree in scale, not to the dollar.			
DIFFERS	Tool's industry TTM net rate, credit-card, every quarter 2006Q4 to 2026Q2 (largest gap shown)	4.6100 tool series credit-card_industry_net.csv, 2007Q3	3.8995 QBP-built TTM, 2007Q3; 32 of 79 quarters differ by 0.01 pts or more	0.7105 % · tolerance 0.01 pts, the precision a threshold is set at
DIFFERS	Tool's industry TTM net rate, mortgage, every quarter 2006Q4 to 2026Q2 (largest gap shown)	0.8508 tool series mortgage_industry_net.csv, 2009Q2	0.9862 QBP-built TTM, 2009Q2; 9 of 79 quarters differ by 0.01 pts or more	-0.1354 % · tolerance 0.01 pts, the precision a threshold is set at

Verdict	Figure	Ours (the tool's side)	Source (not ours)	Difference
DIFFERS	Tool's industry TTM net rate, home-equity, every quarter 2006Q4 to 2026Q2 (largest gap shown)	1.6633 tool series home-equity_industry_net.csv, 2008Q4	1.7714 QBP-built TTM, 2008Q4; 9 of 79 quarters differ by 0.01 pts or more	-0.1081 % · tolerance 0.01 pts, the precision a threshold is set at
COULD NOT	Peer median of TTM net charge-off rates (any product)	— computed here with the tool's bank_book	— none	—
	No one publishes a median of this 15-bank roster, so there is nothing independent to tie it to. Attacked once: each input rate is a per-bank TTM rate, and one of them (KeyBank card, above) was rebuilt from five filings and ties. The median of rates that tie is arithmetic on them; it is shown, not tied.			
DIFFERS	Industry card gross charge-offs in 2006Q4: the tool's quarterly flow against the QBP	6,622.073 tool cache, by industry()'s rule (each bank's YTD less its previous quarter's)	3,664.048 FDIC QBP time series, Credit Cards, Total charge-offs, 2006Q4	2,958.025 $m · tolerance $1m
	Difference 2958.0; the absorbed charter(s) Bank of America, National Association (USA) (27595), Citibank (Nevada), National Association (26211) filed year-to-date card charge-offs of 2921.9 at their last report.			
DIFFERS	Industry card gross charge-offs in 2010Q2: the tool's quarterly flow against the QBP	20,508.339 tool cache, by industry()'s rule (each bank's YTD less its previous quarter's)	20,434.134 FDIC QBP time series, Credit Cards, Total charge-offs, 2010Q2	74.205 $m · tolerance $1m
	Difference 74.2; the absorbed charter(s) Wachovia Card Services, National Association (58496) filed year-to-date card charge-offs of 74.0 at their last report.			
DIFFERS	Industry card gross charge-offs in 2011Q3: the tool's quarterly flow against the QBP	15,584.383 tool cache, by industry()'s rule (each bank's YTD less its previous quarter's)	10,738.14 FDIC QBP time series, Credit Cards, Total charge-offs, 2011Q3	4,846.243 $m · tolerance $1m
	Difference 4846.2; the absorbed charter(s) Citibank (South Dakota), N.A. (23360) filed year-to-date card charge-offs of 4846.2 at their last report.			
DIFFERS	Industry card gross charge-offs in 2014Q4: the tool's quarterly flow against the QBP	9,133.773 tool cache, by industry()'s rule (each bank's YTD less its previous quarter's)	6,479.608 FDIC QBP time series, Credit Cards, Total charge-offs, 2014Q4	2,654.165 $m · tolerance $1m
	Difference 2654.2; the absorbed charter(s) FIA Card Services, National Association (33318) filed year-to-date card charge-offs of 2655.0 at their last report.			

Verdict	Figure	Ours (the tool's side)	Source (not ours)	Difference
DIFFERS	Industry card gross charge-offs in 2019Q2: the tool's quarterly flow against the QBP	11,458.741 tool cache, by industry()'s rule (each bank's YTD less its previous quarter's)	10,603.072 FDIC QBP time series, Credit Cards, Total charge-offs, 2019Q2	855.669 $m · tolerance $1m
	Difference 855.7; the absorbed charter(s) Chase Bank USA, National Association (23702) filed year-to-date card charge-offs of 855.7 at their last report.			
DIFFERS	Industry card gross charge-offs in 2022Q4: the tool's quarterly flow against the QBP	10,380.287 tool cache, by industry()'s rule (each bank's YTD less its previous quarter's)	7,688.25 FDIC QBP time series, Credit Cards, Total charge-offs, 2022Q4	2,692.037 $m · tolerance $1m
	Difference 2692.0; the absorbed charter(s) Capital One Bank (USA), National Association (33954) filed year-to-date card charge-offs of 2700.6 at their last report.			
DIFFERS	Home equity, 31 Dec 2025: KeyCorp's class against the Call Report's home equity lines	3,044.698 KeyBank Call Report, RC-C 1.c.(1) revolving lines only	5,703 KeyCorp 10-K 2025, Home equity loans	-2,658.302 $m · tolerance $m rounding
	A definition gap, not an error: KeyCorp's home equity includes closed-end home equity loans, which the Call Report files under 1.c.(2) with residential mortgages.			
DIFFERS	Home equity, 30 Jun 2026: KeyCorp's class against the Call Report's home equity lines	2,929.57 KeyBank Call Report, RC-C 1.c.(1) revolving lines only	5,408 KeyCorp 10-Q Q2 2026, Home equity loans	-2,478.43 $m · tolerance $m rounding
	A definition gap, not an error: KeyCorp's home equity includes closed-end home equity loans, which the Call Report files under 1.c.(2) with residential mortgages.			
COULD NOT	Where KeyBank's direct auto book is filed, beyond RC-C 6.c	— public filings	— none	—
	KeyCorp's 10-K and 10-Q never state a direct auto balance (searched for automobile, auto, direct, indirect, marine, recreational): the nearest is 'consumer loans have collateral that includes residential real estate, automobiles, boats, and RVs'. The internal figure is not used here, by rule. What public data does settle: RC-C 6.c must hold all direct and indirect consumer loans to buy a car (62,212); consumer auto leases are 10.a (0); boats, RVs, motorcycles and cash loans against a car already owned are 6.d.			
COULD NOT	Consumer leases in the tool's data (RC-C 10.a)	— FDIC API: no field for RC-C 10.a	— filed on RC-C 10.a for every bank (read below)	—

Verdict	Figure	Ours (the tool's side)	Source (not ours)	Difference
	The FDIC API publishes total leases (LS) but no consumer-lease line, so the tool cannot carry 10.a. Attacked once: the field dictionary (risview_properties.yaml, 2,378 fields) was searched for lease, individual, consumer and personal; nothing maps to RCFDF162. The filings are read directly instead.			

The 131 TIED figures are listed in full at the end. A TIED figure means the tool reads the public data correctly; it does not mean the gap it belongs to is small.

Gap 1 · Government-guaranteed loans counted as 90+ days late

The question. FHA and VA mortgages and federally guaranteed student loans can sit 90+ days late with little loss to the bank, because the government pays. Does that inflate the 90+ measures, and by how much?

> **Real. At KeyBank about a third of first-lien 90+ is government-insured; at the peers it could be most of it, but the filings give only an upper bound.** On today's form the lines are RC-N **item 11** (loans wholly or partially guaranteed by the U.S. Government), **11.a** (the guaranteed portion, excluding rebooked GNMA loans) and **11.b** (rebooked GNMA loans: Ginnie Mae pool loans the bank may buy back, which come back onto its books). Item 10 is now "Debt securities and other assets". The brief's "items 10 and 10.a" is the older numbering.

KeyBank's filing, 30 June 2026

FFIEC 031
Report Date 6/30/2026
45

Dollar amounts in thousands	(Column A) Past due 30 through 89 days and still accruing		(Column B) Past due 90 days or more and still accruing		(Column C) Nonaccrual		
2. Closed-end loans secured by 1-4 family residential properties:							1.c.2.
a. Secured by first liens	RCONC236	**23,309**	RCONC237	**15,000**	RCONC229	**120,395**	1c2a.
11. Loans and leases reported in items 1 through 8 above that are wholly or partially guaranteed by the U.S. Government, excluding loans and leases covered by loss-sharing agreements with the FDIC:	RCFDK036	**1,108**	RCFDK037	**69,414**	RCFDK038	**0**	11.
a. Guaranteed portion of loans and leases included in item 11 above, excluding rebooked "GNMA loans"	RCFDK039	**0**	RCFDK040	**0**	RCFDK041	**0**	11.a.
b. Rebooked "GNMA loans" that have been repurchased or are eligible for repurchase included in item 11 above	RCFDK042	**1,108**	RCFDK043	**69,414**	RCFDK044	**0**	11.b.

KeyBank National Association | FFIEC 031 | Report date 6/30/2026 | Schedule RC-N, report page 45 | Column B: 90+ days, still accruing | 1.c.(2)(a) RCONC237 = 15,000 | 11 RCFDK037 = 69,414 | 11.a RCFDK040 = 0 | 11.b RCFDK043 = 69,414 | $ thousands

All of KeyBank's guaranteed 90+ is rebooked GNMA loans (11.b), and 11.a is zero, so no guaranteed student loans are 90+ late. The rebooked GNMA amount (69,414) is more than four times KeyBank's whole first-lien 90+ line (15,000), so most of it cannot be residential. KeyCorp's 10-Q says which:

(b) Accrued interest of $453 million presented in "Accrued income and other assets" on the Consolidated Balance Sheets is e
(c) Includes balances of $54 million in Commercial mortgage and $5 million in Real estate - residential mortgage associated with loans sold to GNMA that are 90 days or more past due where Key has the right but not the obligation to repurchase and whose payments are insured by the Federal Housing Administration or guaranteed by the United States Department of Veteran Affairs.
(d) Net of unearned income, net of deferred fees and costs, and unamortized discounts and premiums.

KeyCorp 10-Q, quarter ended 30 Jun 2026 | Note 4 aging table, footnote (c) | $54m commercial mortgage | $5m residential mortgage | $ millions

So about $5m of KeyBank's $15.0m first-lien 90+ is government-insured residential loans. KeyCorp's own aging table counts these loans as *current* (footnote (c) sits on the Current column), while the Call Report counts them as 90+ and still accruing. Internal 90+ therefore excludes them and filed 90+ includes them. At 31 December 2025 the two tie ($66m + $6m against 72,321); at 30 June 2026 they differ by about $10m, which is not explained here:

Bank of America	195,000	121,000	62%	1,404,000	65,000	5%	81,000
Citi	130,000	99,000	76%	377,000	44,000	12%	29,000
U.S. Bank	4,181,884	3,945,459	94%	554,836	374,331	67%	0
PNC	237,243	193,499	82%	501,591	107,593	21%	3,267
Truist	594,000	502,000	85%	658,000	267,000	41%	45,000
Capital One	0	0	n/a	4,000	0	0%	0
KeyBank	15,000	69,414	463%	23,309	1,108	5%	0
Fifth Third	276,000	253,000	92%	115,000	62,000	54%	12,000
Huntington	383,420	306,288	80%	570,040	105,703	19%	19,606
First Citizens	7,000	3,000	43%	152,000	1,000	1%	4,000
Citizens	580,153	576,313	99%	109,014	44,466	41%	5,699
M&T	713,000	615,000	86%	643,000	257,000	40%	97,000
Regions	198,000	120,000	61%	191,000	75,000	39%	1,000
Zions	0	0	n/a	9,905	0	0%	20
Industry (4,313 filers)	18,451,575	11,701,511	63%				

Item 11 is not split by loan type, so "GNMA ÷ first-lien" is an upper bound: a ratio over 100% (KeyBank, Wells Fargo) means some GNMA loans are commercial (FHA multifamily) rather than 1-4 family. The FDIC's QBP files rebooked GNMA loans under closed-end first liens, and its industry figure ties to the FDIC API to the dollar (figure G1-35), but that is the same unsplit item 11.b. So the filings show that government-insured loans *could* be most of the 90+

accruing mortgage measure at most mortgage lenders on the roster, not that they are: KeyBank, the one bank whose split is public, has most of its GNMA in commercial loans. A split for each peer would need its own holding-company filings, which were not read here. On the 90+ including nonaccrual measure the industry share is at most 32%.

U.S. Bank National Association | Report date 6/30/2026 | 1.c.(2)(a) col B = 4,181,884 | 11.b col B = 3,945,459

Industry over time (QBP, $m): 2010Q4 45,963 of 89,891 (51%); 2012Q4 65,029 of 97,514 (67%); 2014Q4 40,806 of 59,483 (69%); 2016Q4 28,591 of 37,924 (75%); 2018Q4 19,323 of 24,388 (79%); 2020Q4 20,024 of 29,979 (67%); 2022Q4 10,932 of 15,356 (71%); 2024Q4 9,625 of 14,640 (66%); 2026Q2 11,702 of 18,452 (63%).

A field-name trap, found on the way. The FDIC API's names read the wrong way round. `P9GTYPAR` ("part guaranteed") is item 11, all wholly or partially guaranteed loans; `P9GTY` is 11.a, the guaranteed portion; `P9GTYGNM` is 11.b. The same holds for the 30–89 (`P3`) and nonaccrual (`NA`) twins. It was settled by reading the 16 filings, not the dictionary.

> **Recommended fix.** For mortgage, compare banks on nonaccrual and charge-offs, where guaranteed loans barely register. Do not subtract rebooked GNMA (P9GTYGNM) from a peer's first-lien 90+ (P9RERSFM): item 11.b is not split by loan type, so the subtraction can take out commercial loans. KeyBank shows it: 15,000 − 69,414 is below zero, while about $10m of its first-lien 90+ is not government-insured. If a 90+ mortgage figure is shown, put "rebooked GNMA ÷ first-lien 90+" beside it, labelled as an upper bound on the insured share. For KeyBank use the 10-Q's residential figure each quarter. When internal 90+ is compared with filed 90+, take the residential GNMA amount off the filed side, because KeyCorp counts those loans as current. Other consumer: KeyBank has none (11.a is 0); for peers, item 11.a mixes SBA, student and other guarantees and cannot be pinned to a product.

Verdict	Figure	Ours (the tool's side)	Source (not ours)	Difference
TIED	Industry rebooked GNMA loans 90+ days past due, 2026Q2	11,701.511 FDIC API P9GTYGNM summed over 4313 filers ($000 / 1,000)	11,701.511 FDIC QBP time series, sheet Loan Performance, block 'Rebooked GNMA Loans' (row 140), 2026Q2	0 $m · tolerance the spreadsheet states $m to three decimals
TIED	KeyBank rebooked GNMA 90+ at 31 Dec 2025: filing against KeyCorp 10-K	72.321 KeyBank Call Report 31 Dec 2025, RCFDK043 ($000 / 1,000)	72 KeyCorp 10-K 2025, Note 4 aging table footnote (c): $66 m commercial mortgage + $6 m residential	0.321 $m · tolerance two figures each rounded to $1m
DIFFERS	KeyBank rebooked GNMA 90+ at 30 Jun 2026: filing against KeyCorp 10-Q	69.414 KeyBank Call Report 30 Jun 2026, RCFDK043 ($000 / 1,000)	59 KeyCorp 10-Q Q2 2026, Note 4 aging table footnote (c): $54 m commercial mortgage + $5 m residential	10.414 $m · tolerance two figures each rounded to $1m
	Not explained here. Item 11.b counts GNMA loans 'repurchased or eligible for repurchase'; the 10-Q footnote counts loans 'where Key has the right but not the obligation to repurchase'. Loans already bought back would be in the first and not the second. That is a reading of the two definitions, not a reconciliation.			

The other 30 gap-1 figures are the 15 peers' rebooked GNMA 90+ and first-lien 90+, API (or the tool's cache) against each filing: all TIED; see the full list at the end.

Gap 2 · Nonaccrual is partly bank policy

The question. Card issuers often charge a card off at 180 days without ever putting it on nonaccrual. Is card nonaccrual comparable across the peers?

> **No. It is policy, and the Call Report allows it.** Any consumer loan or 1-4 family mortgage "need not be placed in nonaccrual status"; if a bank elects to, it must report it in column C.

Nonaccrual Status: This entry covers, for purposes of these reports, the criteria for placing assets in nonaccrual status (presented in the general rule below) and related exceptions, the reversal of previously accrued but uncollected interest, the treatment of cash payments received on nonaccrual assets and the criteria for cash basis income recognition, the restoration of a nonaccrual asset to accrual status, and the treatment of multiple extensions of credit to one borrower.

General rule – Banks shall not accrue interest, amortize deferred net loan fees or costs, or accrete discount on any asset (1) which is maintained on a cash basis because of deterioration in the financial condition of the borrower, (2) for which payment in full of principal or interest is not expected, or (3) upon which principal or interest has been in default for a period of 90 days or more unless the asset is both well secured and in the process of collection.

Exceptions to the general rule – In the following situations, an asset need not be placed in nonaccrual status:

(1) The asset upon which principal or interest is due and unpaid for 90 days or more is a consumer loan (as defined for Schedule RC-C, Part I, item 6, "Loans to individuals for household, family, and

FFIEC 031 and 041 instructions, Glossary, 'Nonaccrual Status' | page A-92 (3-24), in the September 2026 set | Exceptions to the general rule, (1)

Nonaccrual Status (cont.):

other personal expenditures") or a loan secured by a 1-to-4 family residential property (as defined for Schedule RC-C, Part I, item 1.c, Loans "Secured by 1-4 family residential properties"). Nevertheless, such loans should be subject to other alternative methods of evaluation to assure that the bank's net income is not materially overstated. However, to the extent that the bank has elected to carry such a loan in nonaccrual status on its books, the loan must be reported as nonaccrual in Schedule RC-N, column C.

Citizens Bank, N.A. | Report date 12/31/2015 | RC-N 5.a

Industry-wide, nonaccrual is 18.3% of card 90+ including nonaccrual in 2009, 11.7% of card 90+ including nonaccrual in 2014, 10.2% of card 90+ including nonaccrual in 2019, 5.6% of card 90+ including nonaccrual in 2026.

> **Recommended fix.** Compare cards across banks only on **90+ including nonaccrual** and **30+ including nonaccrual** (30–89 is unaffected). A bank that moves a loan to nonaccrual at 90 days and one that keeps it accruing to 180 days both count it there. Show nonaccrual alone and 90+ accruing alone only for KeyBank's own history. The same exception covers every consumer product and 1-4 family mortgage; the other products' nonaccrual practice was not measured here (see "What this does not prove").

Figures

36 figures, every one TIED: for each of the 16 banks, card nonaccrual and card 90+ accruing in the tool's cache against the filing (32), and the two 2015 filings (4). Listed at the end.

Gap 3 · Card securitizations back on balance sheet in 2010 (FAS 166/167)

The question. From 2010Q1, accounting standards FAS 166 and 167 brought securitized card receivables back onto banks' balance sheets. Is there a break in card balances or rates, for the industry and the peers?

> **Yes in the industry series. In the roster banks' own series only PNC's card book jumps, and the jump rule already leaves it out.** Industry card balances rose from $421.5bn to $712.8bn in one quarter (+69.1%). 98.2% of the rise came in four separate card charters that are not on the roster: Citibank (South Dakota), FIA Card Services, Chase Bank USA and Capital One Bank (USA). Each was later merged into its roster parent (2011, 2014, 2019 and 2022).

Group	2009Q4 balance ($000)	2010Q1 balance	Quarterly rate 2009Q4	Quarterly rate 2010Q1
The four card charters	159,431,798	445,445,906	10.59%	11.85%
Rest of the industry	262,046,813	267,329,864	8.96%	8.29%

The four charters' own loss rate barely moved across the break, and the rest of the industry eased. The industry rate rose because the higher-loss issuers' share of the book jumped: holding each group at its 2010Q1 rate, the 2009Q4 weights give 9.64% and the 2010Q1 weights 10.51%, a mix effect of **+0.88 pts** (quarterly, annualised, on quarter-end balances). The tool's industry TTM series goes 2009Q3 8.48, 2009Q4 9.49, 2010Q1 10.14, 2010Q2 10.37, 2010Q3 9.89, 2010Q4 9.29, 2011Q1 8.39.

The QBP's own quarterly rate jumps from 9.80% to 13.21% at 2010Q1, an artefact of averaging a pre-consolidation balance with a post-consolidation one under post-consolidation losses. How a series averages its balance decides how the break shows.

The roster banks at the break (card balance, $000)

Bank	2009Q4	2010Q1	Change	25% jump rule
JPMorgan	13,793,000	13,233,000	-4.1%	
Wells Fargo	15,382,000	17,330,000	12.7%	
Bank of America	5,703	2,572	-54.9%	left out
Citi	36,747,000	36,134,000	-1.7%	
U.S. Bank	16,009,995	15,450,745	-3.5%	
PNC	2,140,360	3,582,649	67.4%	left out
Truist	282,958	287,508	1.6%	
Capital One	0	0	n/a	
KeyBank	0	0	n/a	
Fifth Third	1,969,335	1,852,707	-5.9%	
Huntington	0	0	n/a	
First Citizens	242,184	232,899	-3.8%	
Citizens	2,201,950	2,056,216	-6.6%	
M&T	64	66	3.1%	
Regions	0	0	n/a	
Zions	109,597	102,862	-6.1%	

Only PNC (+67%) and Bank of America's tiny card book moved more than 25%, and the jump rule leaves both out. The pack composite for cards starts at 2010Q4 regardless (earlier quarters fall to breaks or to fewer than five banks).

The Federal Reserve's own account of the consolidation

Release Date: April 16, 2010

Notes on the Data (billions of dollars)

Some of the data reported in the "Notes on the Data" section of the April 9, 2010 release have been revised. Domestically chartered commercial banks consolidated $378.1 (instead of $377.8) billion in assets and liabilities. The major asset items affected were: other securities, mortgage-backed securities, -$5.6; other securities, non-MBS, -$15.9; commercial and industrial loans, $32.3; real estate loans, revolving home equity loans, $5.9 (instead of $5.8); real estate loans, closed-end residential loans, $21.5; real estate loans, commercial real estate loans, $1.2; consumer loans, credit cards and other revolving plans, $322.3 (instead of $323.9); consumer loans, other

Federal Reserve H.8 | Release date April 16, 2010

Notes on the Data (billions of dollars)

Some of the data reported in the "Notes on the Data" section of the April 9, 2010 release have been revised. Domestically chartered commercial banks consolidated $378.1 (instead of $377.8) billion in assets and liabilities. The major asset items affected were: other securities, mortgage-backed securities, -$5.6; other securities, non-MBS, -$15.9; commercial and industrial loans, $32.3; real estate loans, revolving home equity loans, $5.9 (instead of $5.8); real estate loans, closed-end residential loans, $21.5; real estate loans, commercial real estate loans, $1.2; consumer loans, credit cards and other revolving plans, $322.3 (instead of $323.9); consumer loans, other consumer loans, $41.3; other loans and leases, $8.3; allowance for loan and lease losses, $36.4; cash assets, $2.4; trading assets, other trading assets, -$1.7; and other asset items, $2.5 (instead of $0.7). The major liability items affected were: deposits, large time deposits, $2.7; borrowings, borrowings from banks in the U.S., $4.4; borrowings, borrowings from others, $377.0 (instead of $391.6); and other liability items, $6.6 (instead of $5.1). The residual (assets less liabilities) decreased $12.6 (instead of $25.9). The major memoranda items affected were: securitized credit cards and other revolving plans, -$334.6 instead of (-$351.3); other securitized consumer loans, -$23.3; and securitized real estate loans, -$25.7. Foreign-related institutions consolidated $20.7 billion in assets and liabilities. The major asset items affected were: other securities, non-MBS, $1.1; commercial and industrial loans, $0.7; and other loans and leases, $18.9. The major liability items affected were: deposits, other deposits, $0.5; borrowings, borrowings from others, $21.0; net due to related foreign offices, -$12.0; and other liability items, $11.2. The major memoranda items affected were: securitized credit cards and other revolving plans, $0.0 (instead of $7.3).

Notes on the Data (billions of dollars) | commercial banks consolidated $378.1bn | credit cards and other revolving plans $322.3bn

The H.8 counts what was consolidated: $322.3bn of cards and other revolving plans at domestically chartered commercial banks. The same banks' cards plus other revolving rose $285.8bn on the Call Reports (figure G3-03). These are not the same quantity: the quarter's change also nets off that quarter's charge-offs and paydowns. They agree in scale only, so the figure reads DIFFERS.

> **Recommended fix.** Mark 2010Q1 as a break in the industry card series. Either use it from 2010Q4, the first TTM window entirely after the break, or keep 2006 to 2010Q3 labelled "on-balance-sheet only: excludes securitized cards, about 40% of the book". Do not calibrate the card crisis (the High line) on pre-2010 industry levels without saying so. The roster banks' own card histories before each charter merger are a separate problem: see gap 5.

Figures

Verdict	Figure	Ours (the tool's side)	Source (not ours)	Difference

Verdict	Figure	Ours (the tool's side)	Source (not ours)	Difference
DIFFERS	Commercial banks' cards and other revolving plans: change 2009Q4 to 2010Q1 against the amount consolidated	285.798 FDIC API, BKCLASS N/NM/SM, LNCRCD + LNCONRP, 2010Q1 less 2009Q4 ($000 / 1e6)	322.3 Federal Reserve H.8, 16 Apr 2010, Notes on the Data (revised figure)	-36.502 $bn · tolerance different basis: see note
	Not the same quantity. The H.8 counts only what was consolidated, in the week ending 31 Mar 2010; the quarter's change also nets off that quarter's charge-offs (card net charge-offs alone were $18.7bn, QBP) and paydowns. The two agree in scale, not to the dollar.			

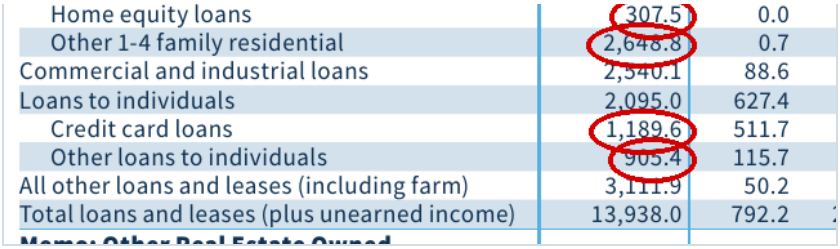

Gap 4 · The dollar-weighted industry total against the peer median

The question. How far apart are the industry total and the peer median, product by product?

> **First, the industry total is right at 2026Q2.** The tool's cache, summed over every filer, gives the FDIC's own published figures: card balances, card delinquency and charge-off rates, home equity, 1-4 family and other consumer balances (8 figures). The tool's TTM industry series also equals a TTM built from the QBP alone at 2026Q2, for card, mortgage, home equity and auto. Over 2006–2026 the card, mortgage and home equity series stray from it in some quarters (figures G4-10, G4-12, G4-14), for the reasons set out in gap 5, not all of them traced. **Then, the gap is real and it depends on the product.**

TABLE V-A. Loan Performance, All FDIC-Insured Institutions

Home equity, selected quarters: 2009Q4 industry 2.95, median 1.34 (12 banks); 2010Q4 industry 2.66, median 1.40 (13 banks); 2014Q4 industry 0.60, median 0.55 (14 banks); 2019Q4 industry -0.07, median 0.01 (12 banks); 2021Q4 industry -0.17, median -0.14 (13 banks); 2024Q4 industry -0.04, median -0.01 (14 banks); 2026Q2 industry -0.02, median -0.01 (13 banks).

Mortgage, selected quarters: 2009Q4 industry 1.41, median 2.12 (9 banks); 2010Q4 industry 1.33, median 1.47 (10 banks); 2014Q4 industry 0.16, median 0.15 (15 banks); 2019Q4 industry 0.01, median 0.00 (13 banks); 2021Q4 industry -0.01, median -0.02 (12 banks); 2024Q4 industry -0.00, median -0.01 (14 banks); 2026Q2 industry 0.00, median -0.00 (13 banks).

Auto, selected quarters: 2014Q4 industry 0.55, median 0.27 (12 banks); 2019Q4 industry 0.80, median 0.59 (12 banks); 2021Q4 industry 0.20, median 0.10 (12 banks); 2024Q4 industry 1.16, median 0.43 (12 banks); 2026Q2 industry 0.99, median 0.43 (11 banks).

The median is the median of the peers' kept rates, computed here with the tool's own `bank_book` under the build's rules (jump 0.25, minimum book $1bn, at least 5 banks). The tool does not build a median yet: its band gives the 10th, 25th, 75th and 90th percentiles. No independent source publishes a median of this roster, so the median itself is COULD NOT (G4-18). Its inputs are per-bank rates, and one of them, KeyBank's card rate, was rebuilt from five filings and ties to the tool's file to six decimals (G4-17).

> **Recommended fix.** Show both, as the firm decided. For auto, anchor on the peer median and say why: the industry auto rate is about twice the median because the dollar-weighted total leans on the large higher-loss lenders. Add p50 to the band. And fix the double count in gap 5 before using any industry history: the card series is up to 0.71 pts high in the quarters after affiliated-charter mergers.

COULD NOT	Peer median of TTM net charge-off rates (any product)	— computed here with the tool's bank_book	— none	—
	No one publishes a median of this 15-bank roster, so there is nothing independent to tie it to. Attacked once: each input rate is a per-bank TTM rate, and one of them (KeyBank card, above) was rebuilt from five filings and ties. The median of rates that tie is arithmetic on them; it is shown, not tied.			

Gap 5 · Mergers and acquired loans

The question. Which quarters carry a jump from an acquisition, and do the roster's rules catch them?

> **Two problems, both real.** (a) The rules leave a rate window out only when a product's book moves more than 25% in a quarter. The FDIC merger record is pulled, but it feeds only the Balances tab, never the rates. (b) When a bank absorbs an affiliate, the survivor's year-to-date charge-offs include the affiliate's earlier quarters. The tool takes a quarter's flow as year-to-date less the previous quarter, so those quarters are counted twice.

(a) Acquisitions the 25% rule does not catch

182 acquisitions by roster banks since October 2005 (FDIC history, the tool's own list of acquisition codes); 7 with no filing in the cache. Measured for each acquirer, quarter and product: the books of every bank it absorbed that quarter, each at its last filing, added together against the acquirer's own book the quarter before. Of 362 such cases, 130 are material (5% or more of a book over $1bn, or $1bn or more into a smaller one). 70 are caught by the jump rule and **60 are not**. The largest misses:

Acquirer	Quarter	Product	Acquired bank(s), largest first	Acquired book ($000)	Acquirer's book before	Share	Quarter's move
PNC	2021Q4	Auto	BBVA USA	3,651,861	13,613,445	26.8%	+22.2%

Truist	2009Q3	Mortgage	Colonial Bank	4,851,516	25,274,047	19.2%	+2.9%
Huntington	2007Q3	Other consumer	Sky Bank	597,892	3,144,427	19.0%	+21.4%
Citizens	2019Q1	Other consumer	Citizens Bank of Pennsylvania	1,921,309	10,388,724	18.5%	+22.4%
Wells Fargo	2010Q2	Credit card	Wachovia Card Services, National Association	3,035,627	17,330,000	17.5%	-2.2%
PNC	2021Q4	Other consumer	BBVA USA	1,136,371	6,637,966	17.1%	+15.2%
Capital One	2012Q4	Home equity	ING Bank, fsb	333,836	1,963,570	17.0%	+16.8%
PNC	2021Q4	Home equity	BBVA USA	2,223,850	13,086,581	17.0%	+20.5%

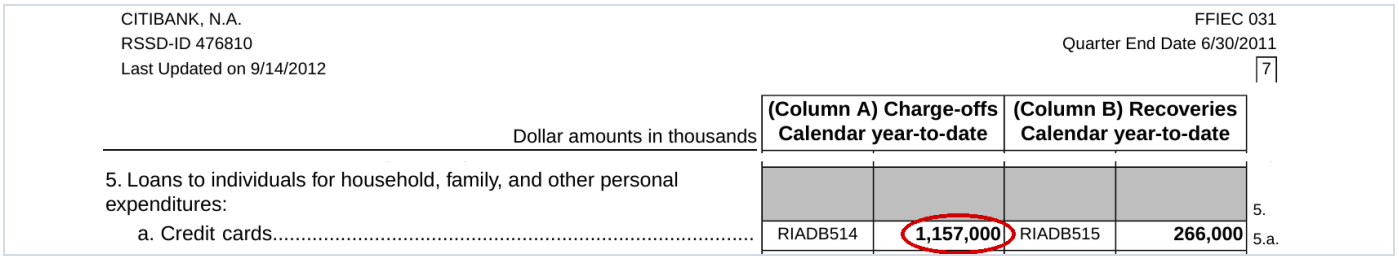

Acquirer	Quarter	Product	Acquired bank(s), largest first	Acquired book ($000)	Acquirer's book before	Share	Quarter's move
Citi	2006Q4	Other consumer	West, National Association and 2 others	10,784,205	64,686,000	16.7%	+7.4%
PNC	2007Q3	Mortgage	Mercantile-Safe Deposit and Trust Company and 10 others	1,844,097	11,177,790	16.5%	+10.5%
Citizens	2022Q2	Mortgage	Investors Bank	4,043,452	25,201,394	16.0%	+18.1%
Huntington	2026Q1	Home equity	Cadence Bank	1,253,952	8,142,712	15.4%	+16.1%
PNC	2021Q4	Credit card	BBVA USA	752,984	4,898,115	15.4%	+18.8%

The quarter's move stays under 25% because the acquirer's own book shrank or the acquisition was under a quarter of the book. Some misses are a group merging its own charters: Citizens Bank of Pennsylvania into Citizens (2019Q1), Wachovia's card bank into Wells Fargo (2010Q2), Fifth Third's Michigan charter (2009Q3). Before such a date the roster bank's history is only part of its group's book. PNC's eleven 2007Q3 mortgage acquisitions are each under 5% of its book and 16.5% together, which is why the count is by quarter, not by charter.

(b) The double count, measured against the QBP

Quarter	Tool's industry card charge-offs ($m)	QBP ($m)	Difference	Absorbed charter(s)	Their last year-to-date
2006Q4	6,622.1	3,664.0	2,958.0	Bank of America, National Association (USA), Citibank (Nevada), National Association	2,921.9
2010Q2	20,508.3	20,434.1	74.2	Wachovia Card Services, National Association	74.0
2011Q3	15,584.4	10,738.1	4,846.2	Citibank (South Dakota), N.A.	4,846.2
2014Q4	9,133.8	6,479.6	2,654.2	FIA Card Services, National Association	2,655.0
2019Q2	11,458.7	10,603.1	855.7	Chase Bank USA, National Association	855.7
2022Q4	10,380.3	7,688.2	2,692.0	Capital One Bank (USA), National Association	2,700.6

Each overcount equals, to within a few $m, the absorbed charter's own year-to-date card charge-offs at its last filing. The filings show why. Citibank NA's September 2011 year-to-date figure carries Citibank (South Dakota)'s first-half losses:

Citibank (South Dakota), N.A. | FFIEC 041 | 6/30/2011 | RI-B 5.a = 4,846,242

8,515,000 − 1,157,000 = 7,358,000, of which 4,846,242 was already counted in South Dakota's own filing. The Call Report requires it:

Transactions between entities under common control – A transaction in which net assets or equity interests (e.g., voting shares) that constitute a business are transferred between entities under common control is not accounted for as a business combination. The method used to account for such transactions is similar to the pooling-of-interests method. In accordance with ASC Subtopic 805-50, [illegible] of the business combination. If there has been a change in reporting entity as defined by ASC Subtopic 250-10, Accounting Changes and Error Corrections–Overall, for the year in which a transaction between entities under common control occurs, income and expenses must be reported in Schedule RI, Income Statement, as though the entities had combined at the beginning of the year. [illegible]

FFIEC 031 and 041 instructions, Glossary | Business Combinations | Transactions between entities under common control

Industry card net charge-off rate, trailing four quarters, %. Blue: the tool's series (credit-card_industry_net.csv). Orange: the same arithmetic on the QBP's published quarterly charge-offs and balances. The lines part for four quarters after each affiliated-charter merger: 24 of the 32 quarters (of 79) that differ by 0.01 pts or more. The other 8 (2007Q4 to 2010Q1) differ by at most 0.04 pts; their cause was not traced.

Mortgage and home equity run the other way in 2008–09 (up to -0.14 and -0.11 pts low): the WaMu and Wachovia acquisitions fit by size and date, but that cause was not traced here. Auto agrees in all 49 quarters compared.

A peer's own series is protected only when the jump rule fires. Citi's 2011Q3 card book moved +302%, so its windows are left out. Wells Fargo's 2010Q2 card book moved −2.2%, so its windows stay in, carrying Wachovia Card Services' first-quarter charge-offs twice ($70.5m net). Wells' own card rate, as the tool computes it, against the same rate without them: 2010Q2 12.24% against 11.81%; 2010Q3 11.63% against 11.20%; 2010Q4 10.81% against 10.39%; 2011Q1 9.63% against 9.21%. These windows are in the pack composite.

Recommended fix. (a) Leave out rate windows that touch any quarter whose recorded acquisitions, added together, are 5% or more of the acquirer's product book. Both banks are in the cache, so the share can be computed rather than guessed. (b) In a merger quarter under common control, take the absorbed bank's last year-to-date flows off the survivor's flow (same calendar year), in `quarterly_flows` and `industry` alike, and hold the industry series to the QBP's published quarterly totals as a test.

Gap 6 · Entity: KeyCorp's 10-K against KeyBank, N.A.'s Call Report

The question. The firm's internal data is KeyCorp's; the Call Report is the bank's. How far apart are their consumer balances and charge-offs on the same dates?

> **Small and fully explained, at both dates.** Two items account for every difference beyond rounding. (1) KeyCorp reports its old education loans ($205m at Dec 2025, $182m at Jun 2026; government-guaranteed and private student loans, a business discontinued in 2009) as "discontinued assets", outside "other consumer loans"; the bank files them in RC-C 6.d with every other student loan. (2) KeyCorp's loan totals exclude loans held for sale; the Call Report includes them (residential: $149m, $204m). **One definition gap remains:** KeyCorp's "home equity" includes closed-end home equity loans that the Call Report files with mortgages.

10-Q Figure 29 | six months ended June 30, 2026 column

The definition gap: home equity

Date	KeyCorp home equity ($m)	Call Report home equity lines, 1.c.(1) ($000)	Difference ($m)	Call Report junior liens, 1.c.(2)(b)
31 Dec 2025	5,703	3,044,698	2,658.3	291,061
30 Jun 2026	5,408	2,929,570	2,478.4	276,020

The difference is closed-end home equity loans. Mortgage and home equity together tie at both dates (figures G6-08, G6-18), and 1.c.(1) holds every revolving home equity line whatever its lien, so what KeyCorp counts as home equity beyond 1.c.(1) is loans the Call Report files in 1.c.(2). Junior liens on the whole Call Report are only $276m, so at least $2.20bn of KeyCorp's home equity loans are first liens, filed in 1.c.(2)(a) with residential mortgages. The tool's "Home equity" is lines only, and its "Mortgage" is first liens including those loans. Internal home equity on KeyCorp's definition will not match either public series.

> **Recommended fix.** In the internal import (docs/INTERNAL-IMPORT.md, on the design branch), name the two reconciling items as exclusions: discontinued education loans and residential loans held for sale. That is exactly the "filed, less named exclusions, against internal" check the firm described. For home equity, either supply internal home equity split into lines and loans (lines compare with 1.c.(1)), or compare internal mortgage plus home equity with filed 1.c.(1) + 1.c.(2)(a) + 1.c.(2)(b) + residential held for sale. The entity gap itself is not worth a separate adjustment: cards tie directly, and the rest ties once the two items are added.

Gap 7 · Auto

The question. KeyBank files 62,212 ($000) of auto loans. The firm says KeyBank has direct auto inside internal other consumer. Where is direct auto filed, and do auto leases matter for the peers?

> **RC-C 6.c ties at 62,212, and by the instructions it must hold every direct and indirect consumer loan to buy a car.** Where any larger direct-auto book sits **COULD NOT** be settled from public data: KeyCorp never states a direct auto balance. What the instructions do settle is what belongs where: boats, RVs, motorcycles, cash loans against a car the borrower already owns, and loans not mainly for buying a car go in 6.d, not 6.c. That is one possible home for the firm's "some random other stuff" (KeyCorp's 10-K says its consumer collateral includes "automobiles, boats, and RVs"), but it is not the only explanation for an internal figure above 62,212: the internal data is KeyCorp's and was not examined here, so entity scope or an internal definition could account for a difference too.

6.c **Automobile loans.** Report (on the FFIEC 041, in column B; on the FFIEC 031, in columns A and B, as appropriate) all consumer loans extended for the purpose of purchasing new and used passenger cars and other vehicles such as minivans, vans, sport-utility vehicles, pickup trucks, and similar light trucks for personal use. Include both direct and indirect consumer automobile loans as well as retail installment sales paper purchased by the bank from automobile dealers.

Exclude from automobile loans:

(1) Loans that meet the definition of a "loan secured by real estate," even if extended for the purpose of purchasing an automobile (report in Schedule RC-C, part I, item 1).

(2) Consumer loans for purchases of, or otherwise secured by, motorcycles, recreational vehicles, golf carts, boats, and airplanes (report in Schedule RC-C, part I, item 6.d).

FFIEC 031 and 041 instructions | Schedule RC-C Part I, item 6.c | page RC-C-13 (3-17)

We classify financial assets as collateral-dependent when our borrower is experiencing financial difficulty, and we expect repayment to be provided substantially through the operation or sale of the collateral. Our commercial loans have collateral that includes cash, accounts receivable, inventory, commercial machinery, commercial properties, commercial real estate construction projects, enterprise value, and stock or ownership interests in the borrowing entity. When appropriate we also consider the enterprise value of the borrower as a repayment source for collateral-dependent loans. Our consumer loans have collateral that includes residential real estate, automobiles, boats, and RVs

KeyCorp 10-K 2025 | Note 4: consumer loan collateral

What happened to KeyBank's filed auto book

Quarter	Auto 6.c ($000)	Other consumer 6.d	Other revolving 6.b	All consumer

2026Q2	62,212	4,200,208	268,825	5,457,834

The auto line ran from $2.7bn (2016, after First Niagara) to $5.1bn, then fell from $3.80bn to $0.15bn in 2021Q3. KeyBank securitized and sold the indirect book and kept $2.82bn of the asset-backed notes as held-to-maturity securities. The 10-K's "senior notes from a securitization collateralized by sold indirect auto loans" are down to $74m (Dec 2025) and $16m (Jun 2026). What is left in 6.c is $62m: the line grew to $180m by mid-2022 and has fallen in every quarter since.

FFIEC 031
Report Date 6/30/2026
22

Dollar amounts in thousands		(Column A) Consolidated Bank		(Column B) Domestic Offices	
c. Automobile loans	RCFDK137	3,248,165	RCONK137	3,248,165	6.c.
10. Lease financing receivables (net of unearned income)			RCON2165	8,582,671	10.
a. Leases to individuals for household, family, and other personal expenditures (i.e., consumer leases)	RCFDF162	4,087,388			10.a.
b. All other leases	RCFDF163	4,495,283			10.b.

U.S. Bank | Report date 6/30/2026 | 6.c = 3,248,165 | 10.a = 4,087,388

Only U.S. Bank and Bank of America file consumer leases. Item 10.a holds every lease to an individual for personal use, not only cars, and neither filing splits it, so the share is an upper bound on auto leasing. The other 14 file zero, and since consumer auto leases belong in 10.a, they have none. The auto rate stays internally consistent: lease charge-offs are on RI-B 8.a, outside the rate's top line, just as leases are outside its bottom line. The FDIC API has no field for 10.a (searched: 2,378 fields), so the tool cannot carry it. Separately, KeyBank's filed auto is a shrinking $62m book, while 12 of the 15 peers hold auto books of $1.3bn to $89bn (Regions, Zions and Citi hold little or none). Peer and industry auto rates describe a different business from KeyBank's direct auto, and KeyBank's own filed auto history is three different books in sequence.

> **Recommended fix.** On site, put internal direct auto at 30 Jun 2026 beside 62,212. If it is larger, list what the internal segment holds (car-purchase loans, boats and RVs, cash loans against owned cars, anything booked outside KeyBank, N.A.) before assigning the difference to a filed line; only the car-purchase loans of KeyBank, N.A. belong in 6.c. Set direct auto's thresholds on internal data, with peers and industry as context only, and do not use KeyBank's filed auto history before 2021Q4. Note on the peer view that U.S. Bank's and Bank of America's auto figures leave out any car leases, which sit in their consumer lease lines (10.a, not split by asset).

Figures

Verdict	Figure	Ours (the tool's side)	Source (not ours)	Difference
TIED	KeyBank auto loans, RC-C 6.c, 30 Jun 2026	62,212 tool cache q20260630.json, LNAUTO	62,212 KeyBank Call Report 30 Jun 2026, RCFDK137	0 $000 · tolerance exact
TIED	KeyBank auto loans, RC-C 6.c, 30 Jun 2021	3,804,433 tool cache q20210630.json, LNAUTO	3,804,433 KeyBank Call Report 30 Jun 2021, RCFDK137	0 $000 · tolerance exact
TIED	KeyBank auto loans, RC-C 6.c, 30 Sep 2021	152,093 tool cache q20210930.json, LNAUTO	152,093 KeyBank Call Report 30 Sep 2021, RCFDK137	0 $000 · tolerance exact
COULD NOT	Where KeyBank's direct auto book is filed, beyond RC-C 6.c	— public filings	— none	—

Verdict	Figure	Ours (the tool's side)	Source (not ours)	Difference
	KeyCorp's 10-K and 10-Q never state a direct auto balance (searched for automobile, auto, direct, indirect, marine, recreational): the nearest is 'consumer loans have collateral that includes residential real estate, automobiles, boats, and RVs'. The internal figure is not used here, by rule. What public data does settle: RC-C 6.c must hold all direct and indirect consumer loans to buy a car (62,212); consumer auto leases are 10.a (0); boats, RVs, motorcycles and cash loans against a car already owned are 6.d.			
COULD NOT	Consumer leases in the tool's data (RC-C 10.a)	— FDIC API: no field for RC-C 10.a	— filed on RC-C 10.a for every bank (read below)	—
	The FDIC API publishes total leases (LS) but no consumer-lease line, so the tool cannot carry 10.a. Attacked once: the field dictionary (risview_properties.yaml, 2,378 fields) was searched for lease, individual, consumer and personal; nothing maps to RCFDF162. The filings are read directly instead.			

The other 15 gap-7 figures are the peers' auto loans, the tool's cache against each filing: all TIED.

How to run it yourself

Every step uses the real values. **Run every command from the `threshold-engine/` folder**, with the package installed (`pip install -e .`); every output goes under `work/`. The scripts need Python 3.11+, `openpyxl`, `pdfplumber`, `Pillow`, `playwright` and poppler's `pdftoppm`. Steps 1, 2 and 4 re-derive every figure; step 5 rebuilds this document; steps 3 and 6 are checks by hand.

1. The tool's own data, with the commands the README gives (Auto added):

   ```
   threshold-engine peers pull --cache work/fdic-cache --first 2006Q1 --last 2026Q2 --products "Cre
   dit card" Mortgage "Home equity" "Other consumer" Auto --mergers 2005-10-01 --delinquency yes
   threshold-engine peers build work/peers.xlsx --cache work/fdic-cache --roster config/peers.json
   --series-dir work/peer-series --first 2006Q1 --last 2026Q2 --products "Credit card" Mortgage "Ho
   me equity" "Other consumer" Auto --mergers work/fdic-cache/mergers.json --extra-acquisitions 667
   2=2022Q2 --delinquency yes --industry-combined --jump 0.25 --min-book 1000000 --exempt-self yes
   --pack all --min-banks 5 --rank-by net --last-n 20 --min-obs 12 --base-quarter 2019Q4 --index-mi
   n-book 500000 --lagged-years 2019 2025 --lag-years 2 --normalisation-years 2019 2025 --mix-base-
   year 2019
   ```

2. The independent sources (27 filed Call Reports from the FFIEC CDR, FDIC API responses, KeyCorp's 10-K and 10-Q, the QBP, the instructions, the H.8):

   ```
   python docs/tie-out/comparability-2026-10/scripts/fetch_sources.py --sources work/sources --user
   -agent "Firm name you@example.com"
   ```

   The SEC refuses an automated request that does not name a contact, so the runner supplies their own. Every URL is written to `work/sources/urls.txt`. One filing by hand: open `https://cdr.ffiec.gov/Public/ViewFacsimileDirect.aspx?ds=call&idType=fdiccert&id=17534&date=06302026`, press *Download PDF*, go to Schedule RC-N on report page 45, and read item 11.b column B: **69,414**.

3. One API call by hand, the guaranteed-loan fields for KeyBank:

   ```
   curl -s "https://api.fdic.gov/banks/financials?filters=CERT:17534%20AND%20REPDTE:20260630&fields
   =CERT,REPDTE,P9GTYPAR,P9GTY,P9GTYGNM,P9RERSFM&format=json"
   ```

   It returns `P9GTYPAR 69414, P9GTY 0, P9GTYGNM 69414, P9RERSFM 15000`.

4. Every figure and verdict:

   ```
   python docs/tie-out/comparability-2026-10/scripts/collect.py --sources work/sources --cache wor
   k/fdic-cache --series work/peer-series --roster config/peers.json --engine src --out work/figure
   s.json
   ```

   It prints `figures: 147 {'TIED': 131, 'DIFFERS': 13, 'COULD NOT': 3}` and lists the 16 that are not TIED.

5. The photographs, then this document (canon checks it on the way through and refuses an unmarked source picture):

   ```
   python docs/tie-out/comparability-2026-10/scripts/capture.py --sources work/sources --out work/i
   mages --chrome "C:\Program Files\Google\Chrome\Application\chrome.exe"
   python docs/tie-out/comparability-2026-10/scripts/build_exhibit.py --figures work/figures.json -
   -images work/images --series work/peer-series --qbp work/qbp-card.json --canon %USERPROFILE%\.cl
   aude\plugins\cache\satc\canon\1.22.0 --chrome "C:\Program Files\Google\Chrome\Application\chrom
   e.exe" --out work/TIE-OUT-comparability-2026-10.pdf
   ```

   `work/qbp-card.json` is written by `collect.py` beside `work/figures.json`.

6. Check one KeyCorp figure by hand: in the 10-K at `https://www.sec.gov/Archives/edgar/data/91576/000162828026010546/key-20251231.htm`, find "Figure 9. Composition of Loans": other consumer loans 4,644. Add footnote (c)'s $205 million: 4,849. KeyBank's 31 Dec 2025 Call Report, RC-C 6.b + 6.c + 6.d: 288,376 + 65,960 + 4,493,814 = **4,848,150** ($000).

What it found

- **A defect in the tool's industry series.** Year-to-date differencing counts an absorbed affiliate's charge-offs twice in the merger quarter: six card quarters, $74m to $4.8bn each, and the industry card rate up to 0.71 pts high for four quarters after each. The same mechanism lifts Wells Fargo's own card rate by about 0.4 pts for four quarters of 2010–11, inside the pack composite. No check of the inputs could catch it, because every input value is right. Only putting the series beside the FDIC's own totals showed it.
- **The jump rule misses 60 material acquisitions** (counted by acquirer, quarter and product), up to 27% of a book. The merger record is pulled but used only for the Balances index.
- **Right value, wrong citation, twice.** The government-guaranteed lines are RC-N items 11 to 11.b, not 10 and 10.a. The FDIC's field names for them read the wrong way round (P9GTYPAR is item 11; P9GTY is 11.a).
- **KeyCorp counts rebooked GNMA loans as current; the Call Report counts them as 90+ accruing.** Internal and filed 90+ differ by design, by about $5m for residential at June 2026.
- **KeyCorp's "home equity" is not the Call Report's.** About $2.5bn of closed-end home equity loans are filed with mortgages, so the internal import cannot map home equity one-to-one.
- **KeyBank's filed auto line was emptied by a sale in 2021Q3** (6.c down $3.65bn in the quarter; $2.82bn of auto asset-backed notes kept). 62,212 is what remains: the line grew to $180m by mid-2022 and has fallen in every quarter since.
- **The tool's industry balances are the FDIC's own**, to the published precision on every figure tried, and so are its industry rates at 2026Q2. Its charge-off rates stray from the QBP's in some quarters: after affiliate mergers (card, up to 0.71 pts), in 2008–09 (mortgage and home equity, up to 0.14 pts), and by under 0.05 pts in eight other card quarters of 2007–10. Every filed value the tool's cache was set beside, it holds correctly.

What I got wrong

- **I first read the QBP's rebooked-GNMA rows wrong.** The block below it reuses the same row labels, and my parser let the next block overwrite them: it reported 49.9 ($m) where the sheet says 11,701.511. The composition table in the same sheet (GNMA 9.5% of noncurrent loans, about $12bn) disagreed, which is what caught it. The parser now refuses a label that appears twice in one block.
- **My first count of uncaught acquisitions was 57, and one was an artefact.** Capital One's 2007 card row: the acquired card book never reached the acquirer's card line, so nothing entered its rate. I also briefly narrowed the definition of "material" in the script, which dropped ten caught cases from the denominator; restored, the count was 149, with 93 caught.
- **I then tested each absorbed bank on its own, and the review caught it.** An acquirer that absorbs several banks in one quarter takes in their combined book: PNC's eleven 2007Q3 mortgage acquisitions are each under 5% and 16.5% together. Counted by acquirer, quarter and product, 130 cases are material and 60 slip the rule, against 149 and 56 counted bank by bank.
- **My first guess at the 2019 card overcount's size was 0.13 pts. It is 0.09.** I reasoned from memory of Chase Bank USA's size before measuring; the measured number is what is reported.
- **I first blocked on the network and nearly used the repository's saved FDIC data as a stand-in.** That would have tied the tool's copy against an earlier copy of the same feed. The firm opened the network instead, and nothing from the repository's saved data is used as a source here.
- **The gap-6 photographs of KeyCorp's figures are cut from the HTML filing**, rendered in Chromium, not from a printed PDF. The numbers were read twice, from the rendered table and from the filing's text, and agree.

What this does not prove

- **The workbook was not opened.** The tool's side of every figure is its cache (`peers pull`) or its series CSVs (`peers build`), not cells in `peers.xlsx` or the main workbook. The CSVs are what `workbook` reads; the hop into Excel was tied once, on 12 Oct 2026, for one card figure, and is assumed here. The build ran in a Linux container, not on the firm's Windows machine with Excel.
- **The guaranteed-loan fields (P9GTY…) are not in the tool's cache.** Those comparisons are FDIC API against filing, because the tool does not pull them.
- **Item 11 is not split by loan type**, so the peers' GNMA share of mortgage 90+ is an upper bound. Only KeyBank's split is known, from KeyCorp's 10-Q.
- **Item 10.a is not split by asset**, so U.S. Bank's and Bank of America's lease shares are upper bounds on auto leasing, not measures of it.
- **Nonaccrual practice was measured for cards only.** The same exception covers every consumer product and 1-4 family mortgage; other consumer, auto and mortgage nonaccrual may be just as policy-driven, and were not tested.
- **The 2010 mix effect (+0.88 pts) is an estimate** on quarterly, quarter-end balances. It holds each group's rate fixed, which is a modelling choice.
- **The 2008–09 mortgage and home-equity understatement was measured, not explained.** WaMu and Wachovia fit the timing; no filing was read to prove it.
- **KeyBank's June 2026 GNMA difference (~$10m) is not explained.** The two documents define the population differently; the reconciliation was not done.
- **The peer median is not tied**: no one publishes it. Its inputs were tied for one bank and one product.
- **Where direct auto beyond 62,212 is filed** needs the internal figure, which this tie-out may not use.
- **Delinquency against the median was not compared**, only TTM net charge-off rates. The acquisition analysis covers the 16 roster banks since October 2005 only.
- **Seven acquisitions had no filing in the cache** (acquired banks that filed no Call Report the tool pulled, such as thrifts before 2012) and were not measured.

Verdict	Figure	Ours (the tool's side)	Source (not ours)	Difference
TIED	Industry rebooked GNMA loans 90+ days past due, 2026Q2	11,701.511 FDIC API P9GTYGNM summed over 4313 filers ($000 / 1,000)	11,701.511 FDIC QBP time series, sheet Loan Performance, block 'Rebooked GNMA Loans' (row 140), 2026Q2	0 $m · tolerance the spreadsheet states $m to three decimals
TIED	KeyBank rebooked GNMA 90+ at 31 Dec 2025: filing against KeyCorp 10-K	72.321 KeyBank Call Report 31 Dec 2025, RCFDK043 ($000 / 1,000)	72 KeyCorp 10-K 2025, Note 4 aging table footnote (c): $66 m commercial mortgage + $6 m residential	0.321 $m · tolerance two figures each rounded to $1m
DIFFERS	KeyBank rebooked GNMA 90+ at 30 Jun 2026: filing against KeyCorp 10-Q	69.414 KeyBank Call Report 30 Jun 2026, RCFDK043 ($000 / 1,000)	59 KeyCorp 10-Q Q2 2026, Note 4 aging table footnote (c): $54 m commercial mortgage + $5 m residential	10.414 $m · tolerance two figures each rounded to $1m
	Not explained here. Item 11.b counts GNMA loans 'repurchased or eligible for repurchase'; the 10-Q footnote counts loans 'where Key has the right but not the obligation to repurchase'. Loans already bought back would be in the first and not the second. That is a reading of the two definitions, not a reconciliation.

TIED	KeyBank card TTM net charge-off rate, 2026Q2 (a per-bank rate, the median's input)	3.7558 tool series credit-card_keybank_net.csv, 2026-06-30	3.7558 five KeyBank Call Reports: RI-B 5.a YTD (Jun26 + Dec25 - Jun25), over RC-C 6.a at Sep25, Dec25, Mar26, Jun26	0.0000 % · tolerance same arithmetic, filed inputs
COULD NOT	Peer median of TTM net charge-off rates (any product)	— computed here with the tool's bank_book	— none	—
	No one publishes a median of this 15-bank roster, so there is nothing independent to tie it to. Attacked once: each input rate is a per-bank TTM rate, and one of them (KeyBank card, above) was rebuilt from five filings and ties. The median of rates that tie is arithmetic on them; it is shown, not tied.

COULD NOT	Where KeyBank's direct auto book is filed, beyond RC-C 6.c	— public filings	— none	—
	KeyCorp's 10-K and 10-Q never state a direct auto balance (searched for automobile, auto, direct, indirect, marine, recreational): the nearest is 'consumer loans have collateral that includes residential real estate, automobiles, boats, and RVs'. The internal figure is not used here, by rule. What public data does settle: RC-C 6.c must hold all direct and indirect consumer loans to buy a car (62,212); consumer auto leases are 10.a (0); boats, RVs, motorcycles and cash loans against a car already owned are 6.d.			
COULD NOT	Consumer leases in the tool's data (RC-C 10.a)	— FDIC API: no field for RC-C 10.a	— filed on RC-C 10.a for every bank (read below)	—

Verdict	Figure	Ours (the tool's side)	Source (not ours)	Difference
	The FDIC API publishes total leases (LS) but no consumer-lease line, so the tool cannot carry 10.a. Attacked once: the field dictionary (risview_properties.yaml, 2,378 fields) was searched for lease, individual, consumer and personal; nothing maps to RCFDF162. The filings are read directly instead.
