KeyBank card 90+ days past due, still accruing, 30 June 2026

threshold-engine peer workbook against KeyBank's filed Call Report. Run 12 October 2026. **TIED**

1 · How the dots connect

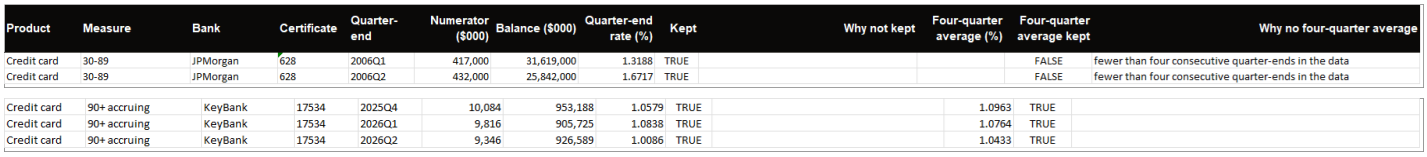

The same fact travels two roads. The top road is how the number reaches the cell the bank reads. The bottom road goes to the report KeyBank itself filed with its regulators, which this software does not produce and cannot change. That is what makes it evidence and not a second opinion from the same feed.

2 · The five links

Link 1 · The figure, read out of the workbook in Excel

File `peers.xlsx`, built 12 Oct 2026 by `peers build` (command in section 4). Opened in Excel 16 through COM automation, recalculated in full (`CalculateFull`), tab **DelinquencyData**, row 2051. Excel's displayed text of each cell:

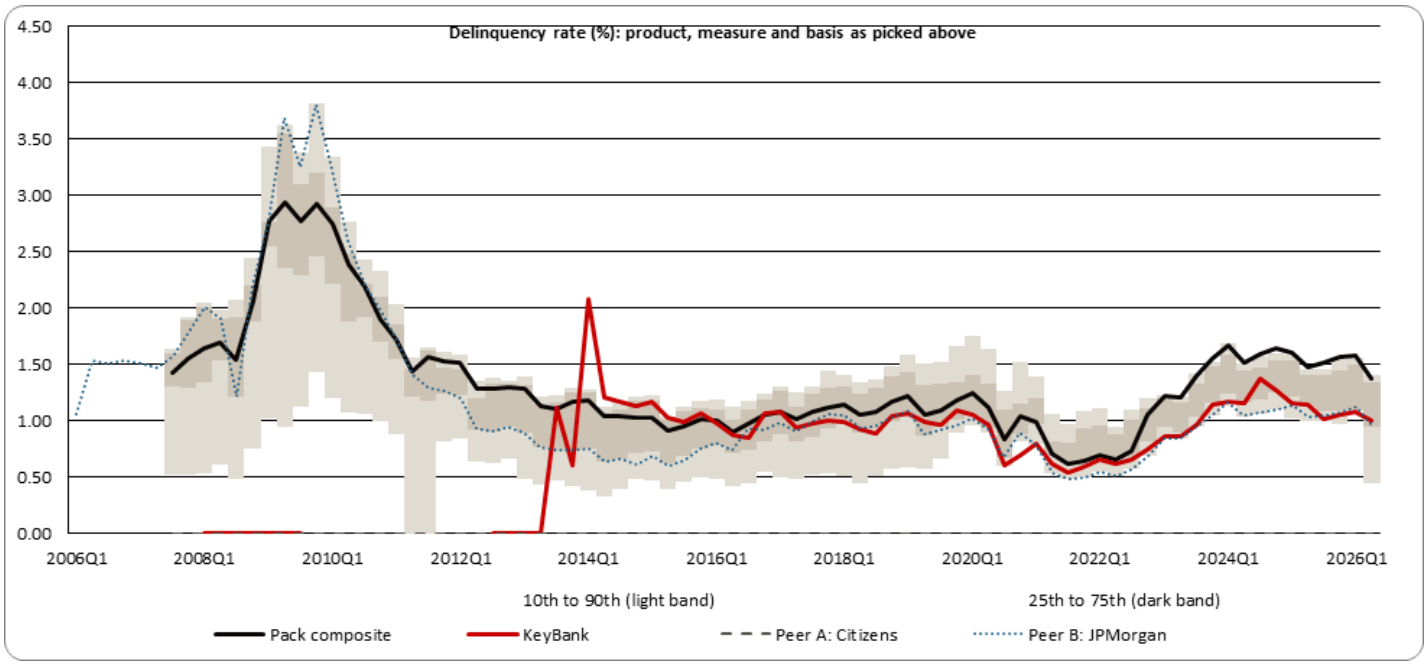

A Product	B Measure	C Bank	D Certificate	E Quarter-end	F Numerator ($000)	G Balance ($000)	H Quarter-end rate (%)
Credit card	90+ accruing	KeyBank	17534	2026Q2	**9,346**	926,589	1.0086

Product	Measure	Bank	Certificate	Quarter-end	Numerator ($000)	Balance ($000)	Quarter-end rate (%)	Kept	Why not kept	Four-quarter average (%)	Four-quarter average kept	Why no four-quarter average
Credit card	30-89	JPMorgan	628	2006Q1	417,000	31,619,000	1.3188	TRUE			FALSE	fewer than four consecutive quarter-ends in the data
Credit card	30-89	JPMorgan	628	2006Q2	432,000	25,842,000	1.6717	TRUE			FALSE	fewer than four consecutive quarter-ends in the data
Credit card	90+ accruing	KeyBank	17534	2025Q4	10,084	953,188	1.0579	TRUE		1.0963	TRUE	
Credit card	90+ accruing	KeyBank	17534	2026Q1	9,816	905,725	1.0838	TRUE		1.0764	TRUE	
Credit card	90+ accruing	KeyBank	17534	2026Q2	9,346	926,589	1.0086	TRUE		1.0433	TRUE	

Pictures of the header and rows 2049–2051, taken from Excel (`Range.CopyPicture`), not from Python.

The Delinquency tab charts this column. With the measure set to *90+ accruing* and the basis to *quarter-end*, the red line ends at 1.01 in 2026Q2:

Exported from Excel after recalculation. In this setting the tab held no formula error and no #N/A.

Link 2 · The call

```
curl -s "https://api.fdic.gov/banks/financials?filters=CERT:17534%20AND%20REPDTE:20260630&fields=CERT,REPDTE,LNCRCD,P3CRCD,P9CRCD,NACRCD&format=json"
```

Response on 12 Oct 2026 (the part that carries the figure):

```
"data":[{"data":{"P3CRCD":8528,"REPDTE":"20260630","LNCRCD":926589,"CERT":17534,"NACRCD":6401,"P9CRCD":9346,"ID":"17534_20260630"}}]
"index":{"name":"risview_20260819185831","createTimestamp":"2026-08-19T18:58:33Z"}
```

`peers pull --delinquency yes` asks the same endpoint for every filer in the quarter (4,313 in 2026Q2) and stores the rows in `cache/q20260630.json`. The cached KeyBank row reads `LNCRCD 926589, P9CRCD 9346`.

Link 3 · The derivation

1. The measure *90+ accruing* has numerator field P9 (`peers/delinquency.py`, `MEASURES`); for credit card that is `P9CRCD`, and the balance is `LNCRCD`.
2. `bank_delinquency(data, "17534", "Credit card", "90+ accruing", jump=0.25, min_book=1000000, exempt_min_book=True)` takes the 2026Q2 row as filed: numerator 9,346, balance 926,589. KeyBank is exempt from the minimum book, and the jump rule does not apply to a quarter-end rate, which comes from one filing.
3. Rate = 100 × 9,346 ÷ 926,589 = 1.008646 %. By hand: 9,346 ÷ 926,589 = 0.0100865.
4. `peers_workbook.py` writes those three numbers to DelinquencyData row 2051, columns F, G and H. They are values, not formulas.

Link 4 · The independent source

KeyBank, National Association's Consolidated Reports of Condition and Income (FFIEC 031), report date 6/30/2026, on the FFIEC Central Data Repository. It is public, with no login:

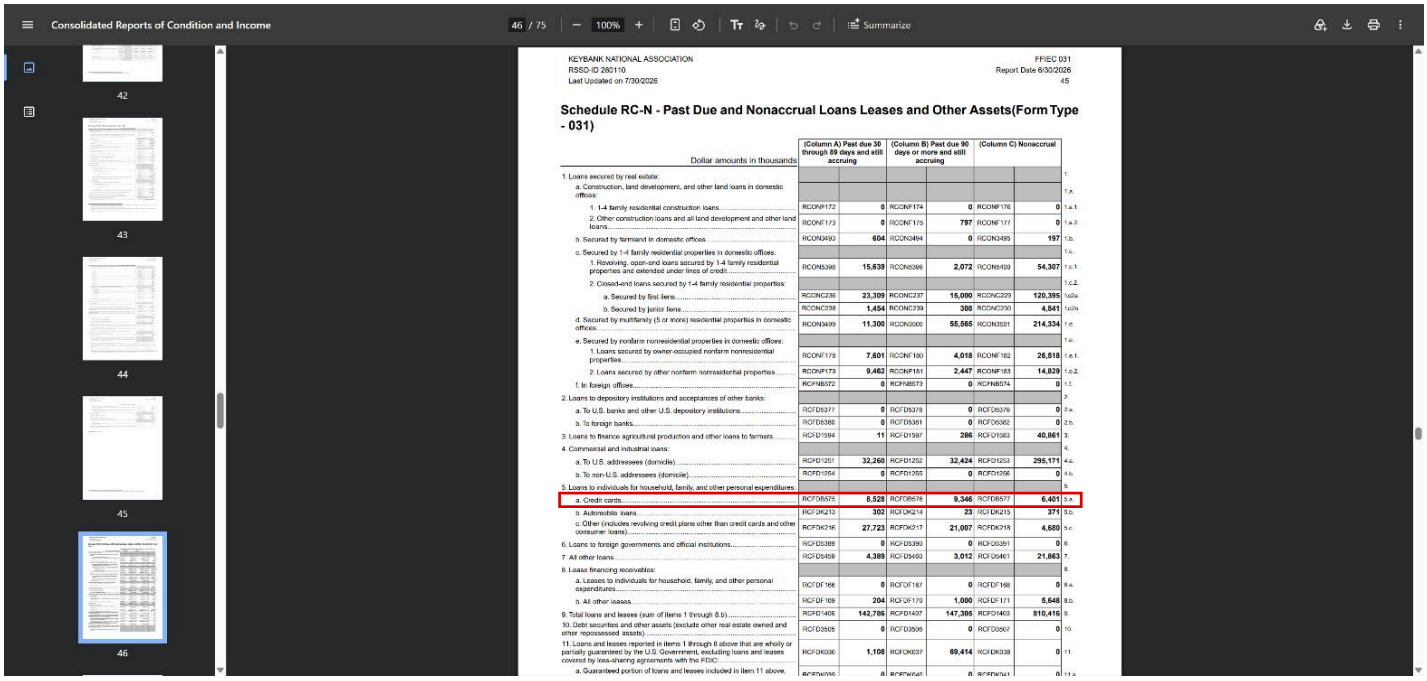

```
https://cdr.ffiec.gov/Public/ViewFacsimileDirect.aspx?ds=call&idType=fdiccert&id=17534&date=06302026
```

First reading, the rendered page. Schedule RC-N, page 45 of the report (page 46 of 75 in the viewer). The page was photographed on 5 Sep 2026 for an earlier credit-suite tie-out. Its header gives the entity, the form and the period:

KEYBANK NATIONAL ASSOCIATION

Last Updated on 7/30/2026

FFIEC 031
Report Date 6/30/2026
45

Schedule RC-N - Past Due and Nonaccrual Loans Leases and Other Assets(Form Type - 031)

Dollar amounts in thousands	(Column A) Past due 30 through 89 days and still accruing		(Column B) Past due 90 days or more and still accruing		(Column C) Nonaccrual		
a. Credit cards	RCFDB575	8,528	RCFDB576	9,346	RCFDB577	6,401	5.a.

Line 5.a *Credit cards*, ringed in red, then enlarged under its column headings.

Schedule RC-N	Report page 45	Line 5.a Credit cards	Column B: Past due 90 days or more and still accruing
RCFDB576	$ thousands	Report date 6/30/2026	Last updated 7/30/2026	**9,346**

For the rate, the balance comes from Schedule RC-C Part I, line 6.a, Column A (Consolidated Bank):

KEYBANK NATIONAL ASSOCIATION
RSSD-ID 280110
Last Updated on 7/30/2026

FFIEC 031
Report Date 6/30/2026
23

Schedule RC-C Part I - Loans and Leases(Form Type - 031)

Do not deduct the allowance for credit losses on loans and leases or the allocated transfer risk reserve from amounts reported in this schedule. Report (1) loans and leases

Dollar amounts in thousands	(Column A) Consolidated Bank		(Column B) Domestic Offices		
a. Credit cards	RCFDB538	926,589	RCONB538	926,589	6.a.

Schedule RC-C Part I	Report page 23	Line 6.a Credit cards	Column A Consolidated Bank	RCFDB538	$ thousands
926,589

Second reading, the filing's XBRL (the machine-readable copy the FFIEC publishes alongside the pages). Downloaded on 12 Oct 2026, 22:30 UTC, through the facsimile page's *Download XBRL* button, using `credit-suite`'s `filing.fetch_xbrl("17534", "2026-06-30")`. 187,801 bytes, SHA-256 `cb185d18…d8a0`. The lines, verbatim:

```
<cc:RCFDB576 contextRef="CI_280110_2026-06-30" unitRef="USD" decimals="0">9346000<
<cc:RCFDB538 contextRef="CI_280110_2026-06-30" unitRef="USD" decimals="0">926589000<
```

The XBRL is in dollars: 9,346,000 USD = 9,346 in thousands. The context `280110` is KeyBank's RSSD ID, printed on the page header.

Link 5 · The comparison

```

```

Must match	Ours	Source	
Entity	cert 17534, KeyBank	KeyBank National Association, RSSD 280110 (FDIC cert 17534 is the id the CDR link uses)	same
Period	2026Q2 quarter-end	Report date 6/30/2026	same
Basis	90+ days past due and still accruing; consolidated bank	RC-N column B, RCFD (consolidated) line	same
Units	$ thousands	page: $ thousands; XBRL: USD, converted	same

TIED on all three: the numerator, the balance and the rate.

3 · Roster

Figure	Verdict
KeyBank card 90+ accruing, 2026Q2, $000 (DelinquencyData!F2051)	TIED
KeyBank card balance, 2026Q2, $000 (G2051)	TIED
KeyBank card 90+ accruing rate, 2026Q2 (H2051)	TIED

3 of 3 tied. DIFFERS 0, COULD NOT 0.

4 · How to run it yourself

In PowerShell or Git Bash, from `C:\Users\ajish\SATC\threshold-engine`.

1. Pull the public FDIC data, with the delinquency fields (about 6 minutes):

   ```
   python -m threshold_engine peers pull --cache fdic-cache --first 2006Q1 --last 2026Q2 --products
   "Credit card" Mortgage "Home equity" "Other consumer" Auto --mergers 2005-10-01 --delinquency yes
   ```

2. Build the peer workbook (about 12 minutes):

   ```
   python -m threshold_engine peers build peers.xlsx --cache fdic-cache --roster config/peers.json --
   series-dir peer-series --first 2006Q1 --last 2026Q2 --products "Credit card" Mortgage "Home equit
   y" "Other consumer" Auto --mergers fdic-cache/mergers.json --extra-acquisitions 6672=2022Q2 --deli
   nquency yes --industry-combined --jump 0.25 --min-book 1000000 --exempt-self yes --pack all --min-
   banks 5 --rank-by net --last-n 20 --min-obs 12 --base-quarter 2019Q4 --index-min-book 500000 --lag
   ged-years 2019 2025 --lag-years 2 --normalisation-years 2019 2025 --mix-base-year 2019
   ```

   (Before installing the package, set `PYTHONPATH=src`.)
3. Open `peers.xlsx` in Excel. On the **DelinquencyData** tab, filter column A to *Credit card*, B to *90+ accruing*, C to *KeyBank* and E to *2026Q2*. Column F reads 9,346.
4. Open the filing in a browser:

   ```
   https://cdr.ffiec.gov/Public/ViewFacsimileDirect.aspx?ds=call&idType=fdiccert&id=17534&date=063020
   26
   ```

   Go to Schedule RC-N (page 45 of the report), line 5.a *Credit cards*, Column B. It reads 9,346.
5. For the rate, on the same filing go to Schedule RC-C Part I (page 23), line 6.a, Column A: 926,589. Then 9,346 ÷ 926,589 × 100 = 1.0086.

5 · What it found

- **The DelinquencyData headers were clipped in Excel.** *Four-quarter average (%)* and *Four-quarter average kept* were cut off at the top of the cell. openpyxl's widths could not show that; opening the file in Excel did. The columns are now wider (`peers_workbook.py`), and the header picture in link 1 was taken from Excel after the fix.
- **Citizens reports zero card loans 90+ days past due and still accruing in all 82 quarters**, 2006Q1 to 2026Q2. On this measure its line lies on the axis. This is what Citizens filed, not an error. A bank that stops accruing on a card before 90 days has nothing to report in column B, so *90+ accruing* alone does not compare banks like for like. *90+ incl. nonaccrual* is the measure that does, which is why all three are built.
- **KeyBank's card 90+ accruing is exactly 0** in 2008Q1–2009Q3 (a $5–7 million book) and in 2012Q3–2013Q2 ($690–730 million, the first four quarters after the book reappears at that size; it was 0 from 2009Q4 to 2012Q2). Then 2014Q1 jumps to 2.08 %. These are the values in the filings. On a quarter-end basis no rule leaves them out, so a scale built on KeyBank's own card history from those years will see them.

6 · What I got wrong

- The first build pointed `--mergers` at a file that does not exist. It refused before writing anything.
- The DelinquencyData column widths, above. That was found here, not by the 675 tests.

7 · What this does not prove

- **One cell, one bank, one quarter.** DelinquencyData has 32,800 rows. The rest are assumed to be right because they come from the same code and the same pull, and that is an inference, not something this check ran. The build's own acceptance test compared KeyBank's 25 product × measure values for 2026Q2 with a separate computation from the raw API data. That proves the code matches the API, not the filing.
- **The page image dates from 5 Sep 2026.** It says *Last updated 7/30/2026*. The XBRL was fetched today and agrees, so no amendment has changed these two lines since then. Other lines were not checked.
- **The width fix was checked on a copy** of this build, with the new widths applied. The 12-minute build was not rerun after the code change.
- **Not proved:** four-quarter averages, the pack composite, the band, the industry series, the other measures and products, and any peer bank's figure. The live Delinquency tab is recalculated against Python in the tests (`formulas`), but none of it is tied to a filing here.
