# The book walkthrough: one command, then Excel

What the firm asked for, 14 Oct 2026: *"i want you to make it work so i can generate this workbook at work with the script, it should be debugged and walked through and tied out."*

This is the walk: the workbook built the way it is built at work, then used in Excel 16 the way a person uses it (clicking the buttons, typing in the yellow row, saving, closing and opening it again), and every answer read back from Excel and set beside an answer written down beforehand from the source files.

## 1. Build

From `threshold-engine/`:

```
python -m threshold_engine peers pull --cache books/ind_cache --first 2006Q1 --last 2026Q2 --products "Cre
dit card" Mortgage "Home equity" "Other consumer" Auto --delinquency yes --mergers 2005-01-01
python -m threshold_engine book books/consumer-public.json consumer-credit.xlsx
```

The walkthrough ran the second command on a copy of the book whose only change is where the cache is (`prepare.py`): the cache pulled on 14 Oct 2026 was used rather than pulled again. Expected: `Wrote consumer-credit.xlsx: 164 series, 143 quarters; open it on Summary, decide on Decide`. It took 21 min 40 s on the round 3 run of 19 Oct 2026, with the full test suite running beside it (8 min 48 s alone before round 3), almost all of it the peers build reading the cache.

## 2. The steps

The steps are cumulative, as a session is: what is typed in one step is still there in the next.

One set of lines per product and measure (the firm, 15 Oct 2026: *"we don't need to set thresholds on all 3, we need to use all 3 to set appropriate thresholds"*): Decide has 35 rows, and each row's **Lines set from** picks the source whose history sets its lines.

| Step | What you do | What it shows |
|---|---|---|
| B1 | Open the workbook | It opens on Summary; the tabs in round 3's order (Peers data, Peers delinquency data, Internal, Internal data, Assess, Chart and both workings tabs hidden); two slicers, one button each; Decide shows the first product and measure, no source picked, nothing decided; the counts, the Large banks strip, Needs your attention empty, the pack line on Peers, Decide and Signals, Reporting changes last on Sources; no links, no errors |
| B2 | Read Summary and Lines by source | Every series Summary shows: its latest value, a dash where its rating goes; every series' own lines equal the reference; the backtest folded into Lines by source for two series, one too short to test |
| B3 | On Decide, click Credit card and Nonaccrual, and pick KeyBank under Lines set from | One row; the lines are KeyBank's own; every source rated on them, beside what its own history would give; Thresholds holds the same |
| B4 | Type 3.5 under How rare High is (z) | High's line moves for every source of the row; Thresholds and Summary follow |
| B5 | Leave out 2012Q3 to 2013Q4, the period Decide suggests, with a reason | KeyBank's lines move as the reference says, the industry's own lines do not; Assess lists the period under KeyBank's series, whole |
| B6, B6b | Clear the reason; type it back | Refused, in words, on Decide and Thresholds; then the lines as in B5 |

| Step | What you do | What it shows |
|---|---|---|
| B7 | Accept these lines, with a note | Decided: 1 of 35; the decision on Thresholds, and on Lines by source beside KeyBank only |
| B8 | Click Auto and Net charge-offs, and pick Industry (every bank) | KeyBank's life-to-date history rated on the lines the industry's longer history gives |
| B9 | Click Mortgage and Net charge-offs, and pick Industry (every bank) | Refused, with the number that would fix it |
| B10 | Save, close, open again | Every pick, decision and setting still there, and the lines with them; Summary's counts and Needs your attention |
| B11 to B13 | On Peers: Regionals only; Every peer with JPMorgan off; JPMorgan back | The peer group's latest values are the composite over the banks left in, and the pack line names those switched off |
| B14 | Open Signals | The controls and Picked, the pack line, where the dollars are, two fit tables |

A step passes when every cell it reads says what `steps.json` says: a number within 1e-9, text exactly.

## 3. How it was run

```
python docs/walkthrough-book/prepare.py PATH-TO-CACHE
python -m threshold_engine book docs/walkthrough-book/out/book.json docs/walkthrough-book/out/consumer-cre
dit.xlsx
python docs/walkthrough-book/expected.py docs/walkthrough-book/out/book.json
copy docs\walkthrough-book\out\consumer-credit.xlsx docs\walkthrough-book\out\walk.xlsx
powershell -NoProfile -ExecutionPolicy Bypass -File docs\walkthrough-book\walk.ps1
python docs/walkthrough-book/compare.py
```

`expected.py` writes the answers from the series CSVs and `scale.py`, never from the workbook. `walk.ps1` does each step in Excel through Excel's own automation and reads each answer back. `compare.py` writes `RESULT.md`.

And, separately, that the file opens without Excel repairing it:

```
powershell -NoProfile -ExecutionPolicy Bypass -File tools\check_slicers_in_excel.ps1 -Path docs\walkthroug
h-book\out\consumer-credit.xlsx -Sheet Decide -Table Decisions -Shapes 3 -Expect "Slicer_Product=Credit ca
rd|Slicer_Measure=Net charge-offs" -SwitchCache Slicer_Measure -SwitchTo "Gross charge-offs"
```

"No errors" in B1 means none a reader can see: on the visible tabs, outside hidden rows and columns. The rest are counted by kind and are all #N/A, the gap a chart leaves where a quarter has no value (on the run of 15 Oct 2026: Assess 169, Chart 8,470, Decide 249, Peers workings 1,556).

## 4. What it does not prove

- The peer tabs are counted for errors and links (B1) but their numbers are not checked against a reference here; `tests/test_peers*.py` hold them.
- One series is tied to the filing (`../tie-out/keybank-card-nonaccrual-2026-10-14/`); the other 104 rest on the same code and the reference, not on a filing each.
- Three of the 35 rows have a source picked in the walk (Credit card nonaccrual, Auto and Mortgage net charge-offs); the other 32 are read blank (a dash) on Summary, and every source's own lines are read for all 105 on Lines by source.

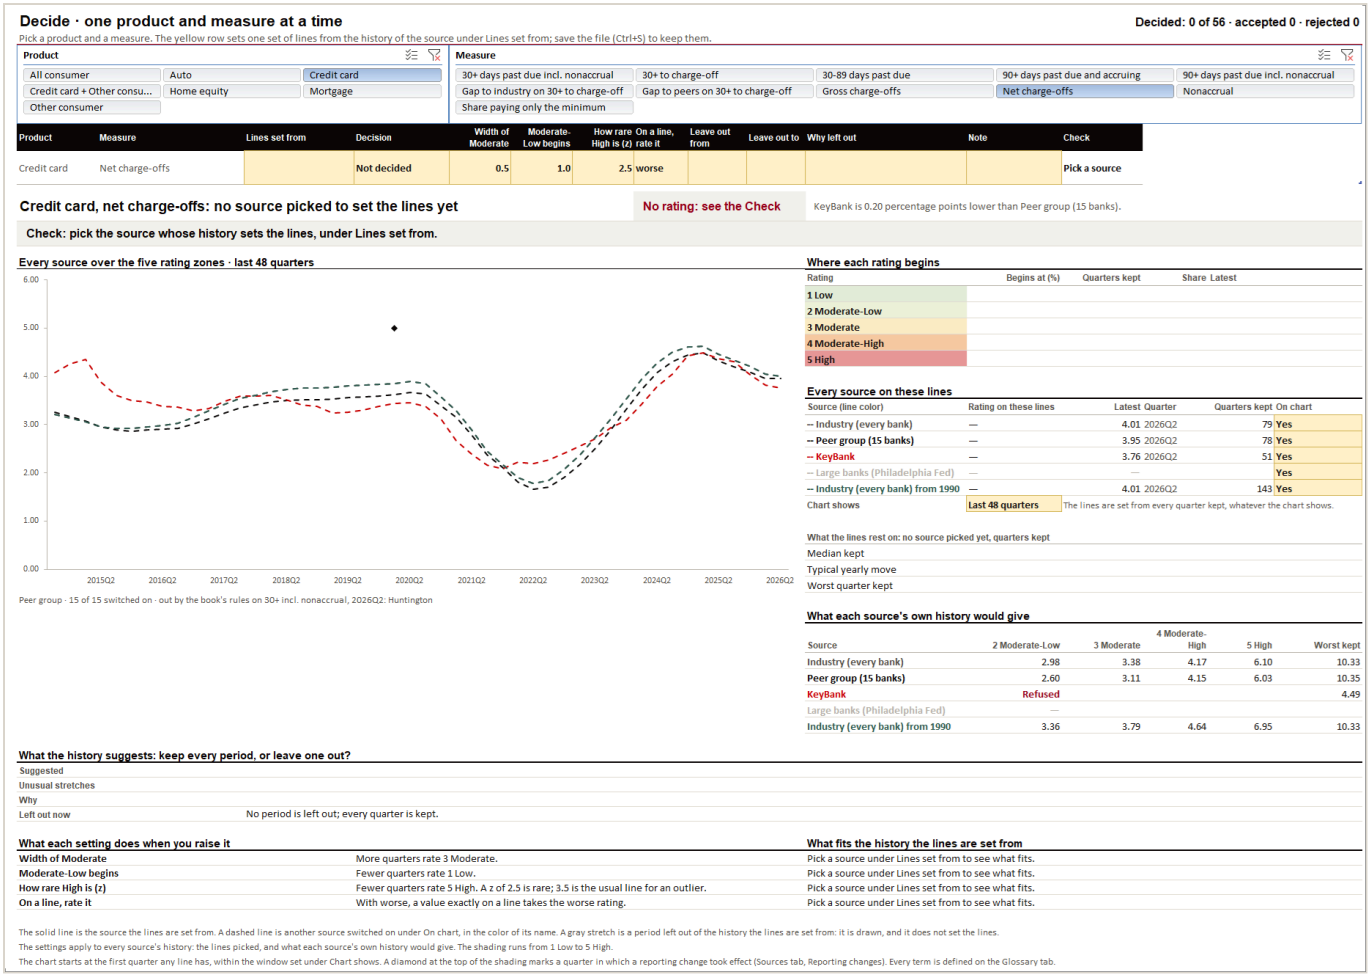

- Thresholds' latest value is written by the build, not a live formula on Data: pasting a corrected quarter into Data moves the lines but not the latest value (found by the tie-out).

## 5. The result

**2467 of 2467 reads as expected.**

| Step | What you do | Reads as expected |
|---|---|---|
| B1 | Open the workbook as built | 47 of 47 |
| B2 | Read Summary, and every source's own lines on Lines by source | 1972 of 1972 |
| B3 | On Decide, click Credit card and Nonaccrual, and pick KeyBank under Lines set from | 59 of 59 |
| B4 | Type 3.5 under How rare High is (z), in the yellow row | 55 of 55 |
| B5 | Leave out 2012Q3 to 2013Q4, the period Decide suggests, with a reason | 41 of 41 |
| B6 | Clear the reason | 3 of 3 |
| B6b | Type the reason back | 26 of 26 |
| B7 | Pick Accept these lines and write a note | 4 of 4 |
| B8 | Click Auto and Net charge-offs, and pick Industry (every bank) under Lines set from | 31 of 31 |
| B9 | Click Mortgage and Net charge-offs, and pick Industry (every bank) | 25 of 25 |
| B10 | Save (Ctrl+S), close Excel, open the file again | 39 of 39 |
| B11 | On Peers, set Banks in the pack to Regionals only | 11 of 11 |
| B12 | Set Banks in the pack back to Every peer, and JPMorgan's cell to No | 11 of 11 |
| B13 | Set JPMorgan's cell back to Pack | 14 of 14 |
| B14 | Open Signals | 129 of 129 |

## 6. What Excel showed

## Decide · one product and measure at a time

Decided: 0 of 56 · accepted 0 · rejected 0

Pick a product and a measure. The yellow row sets one set of lines from the history of the source under Lines set from; save the file (Ctrl+S) to keep them.

**Product**

All consumer | Auto | Credit card
Credit card + Other consu... | Home equity | Mortgage
Other consumer

**Measure**

30+ days past due incl. nonaccrual | 30+ to charge-off | 30-89 days past due | 90+ days past due and accruing | 90+ days past due incl. nonaccrual
Gap to industry on 30+ to charge-off | Gap to peers on 30+ to charge-off | Gross charge-offs | Net charge-offs | Nonaccrual
Share paying only the minimum

| Product | Measure | Lines set from | Decision | Width of Moderate | Moderate-Low begins | How rare High is (z) | On a line, rate it | Leave out from | Leave out to | Why left out | Note | Check |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Credit card | Net charge-offs | | Not decided | 0.5 | 1.0 | 2.5 | worse | | | | | Pick a source |

### Credit card, net charge-offs: no source picked to set the lines yet

No rating: see the Check

KeyBank is 0.20 percentage points lower than Peer group (15 banks).

**Check: pick the source whose history sets the lines, under Lines set from.**

**Every source over the five rating zones · last 48 quarters**

Peer group · 15 of 15 switched on · out by the book's rules on 30+ incl. nonaccrual, 2026Q2: Huntington

**Where each rating begins**

| Rating | Begins at (%) | Quarters kept | Share Latest |
|---|---|---|---|
| 1 Low | | | |
| 2 Moderate-Low | | | |
| 3 Moderate | | | |
| 4 Moderate-High | | | |
| 5 High | | | |

**Every source on these lines**

| Source (line color) | Rating on these lines | Latest Quarter | Quarters kept | On chart |
|---|---|---|---|---|
| -- Industry (every bank) | — | 4.01 2026Q2 | 79 | Yes |
| -- Peer group (15 banks) | — | 3.95 2026Q2 | 78 | Yes |
| -- KeyBank | — | 3.76 2026Q2 | 51 | Yes |
| -- Large banks (Philadelphia Fed) | — | — | | Yes |
| -- Industry (every bank) from 1990 | — | 4.01 2026Q2 | 143 | Yes |

Chart shows: Last 48 quarters — The lines are set from every quarter kept, whatever the chart shows.

What the lines rest on: no source picked yet, quarters kept

Median kept
Typical yearly move
Worst quarter kept

**What each source's own history would give**

| Source | 2 Moderate-Low | 3 Moderate | 4 Moderate-High | 5 High | Worst kept |
|---|---|---|---|---|---|
| Industry (every bank) | 2.98 | 3.38 | 4.17 | 6.10 | 10.33 |
| Peer group (15 banks) | 2.60 | 3.11 | 4.15 | 6.03 | 10.35 |
| KeyBank | Refused | | | | 4.49 |
| Large banks (Philadelphia Fed) | — | | | | |
| Industry (every bank) from 1990 | 3.36 | 3.79 | 4.64 | 6.95 | 10.33 |

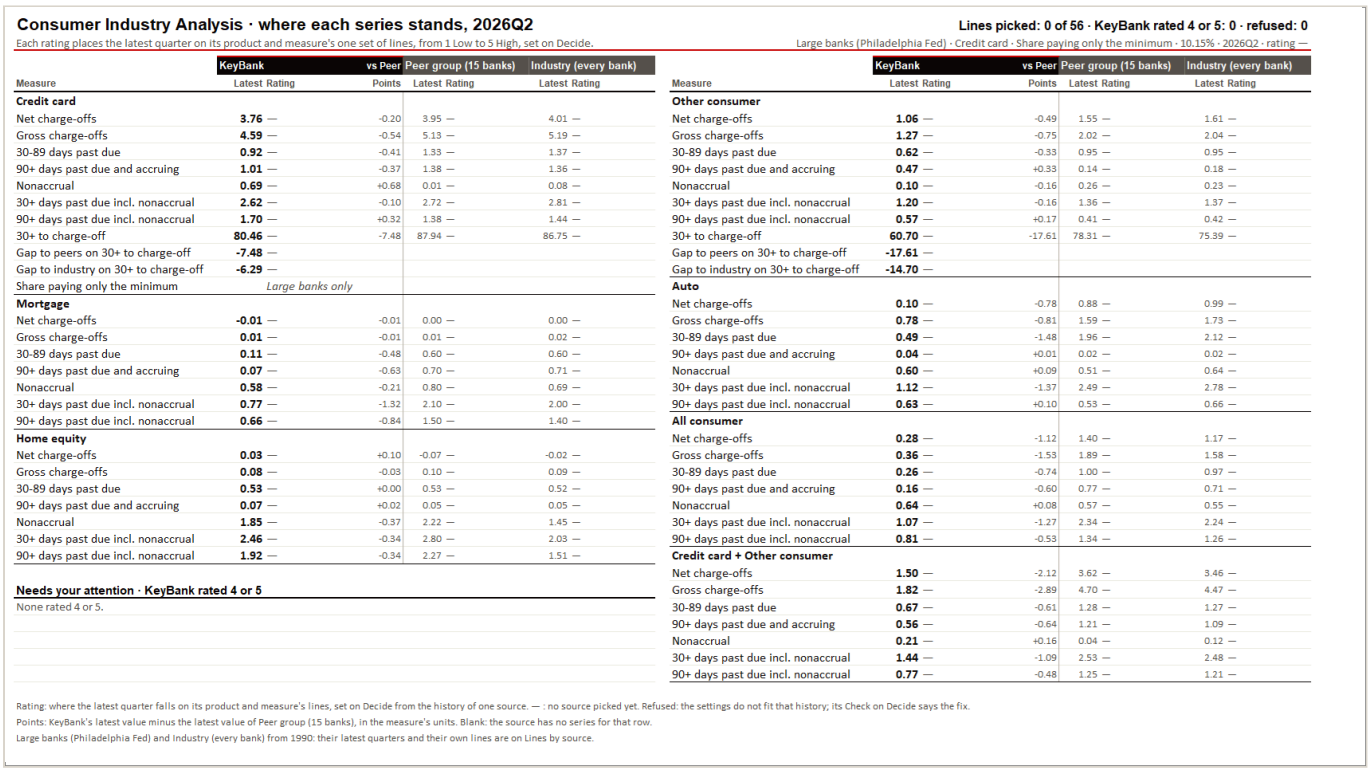

**What the history suggests: keep every period, or leave one out?**

| | |
|---|---|
| Suggested | |
| Unusual stretches | |
| Why | |
| Left out now | No period is left out; every quarter is kept. |

| What each setting does when you raise it | | What fits the history the lines are set from |
|---|---|---|
| Width of Moderate | More quarters rate 3 Moderate. | Pick a source under Lines set from to see what fits. |
| Moderate-Low begins | Fewer quarters rate 1 Low. | Pick a source under Lines set from to see what fits. |
| How rare High is (z) | Fewer quarters rate 5 High. A z of 2.5 is rare; 3.5 is the usual line for an outlier. | Pick a source under Lines set from to see what fits. |
| On a line, rate it | With worse, a value exactly on a line takes the worse rating. | Pick a source under Lines set from to see what fits. |

The solid line is the source the lines are set from. A dashed line is another source switched on under On chart, in the color of its name. A gray stretch is a period left out of the history the lines are set from: it is drawn, and it does not set the lines.
The settings apply to every source's history: the lines picked, and what each source's own history would give. The shading runs from 1 Low to 5 High.
The chart starts at the first quarter any line has, within the window set under Chart shows. A diamond at the top of the shading marks a quarter in which a reporting change took effect (Sources tab, Reporting changes). Every term is defined on the Glossary tab.
