

Tie-out: Bank of America NA

FDIC certificate 3510 · report date 2026-06-30 · every line proved against the bank's own filed Call Report. 5 September 2026.

60 of 60 lines tie.

The left of every comparison is a cell read out of `Bank_Peer_Monitor.xlsx` — not re-fetched, not recomputed. The right is the bank's own Call Report as the FFIEC serves it. All of them agree.

The denominator. This bank has **69** raw fields in the workbook. 60 are compared here; 8 are ratios the FDIC computes from lines proved below, named rather than omitted; and 1 is a field the FDIC publishes no quarterly figure for, so it is blank for every bank. $60 + 8 + 1 = 69$.

How the two roads meet

Only the lower road touches a document the software does not control. The FDIC republishes what the bank filed; the check goes back to what the bank actually filed, which can disagree — and for one bank in this set, it does.

Go and check it yourself

The facsimile is public. This is the exact filing every figure on the right came from:

```
https://cdr.ffiec.gov/Public/ViewFacsimileDirect.aspx?ds=call&idType=fdiccert&id=3510&date=06302026
```

And the previous quarter. Five of these lines are quarterly net charge-offs, which the filing reports year-to-date, so the quarter is this filing minus that one:

```
https://cdr.ffiec.gov/Public/ViewFacsimileDirect.aspx?ds=call&idType=fdiccert&id=3510&date=03312026
```

What this edition covers that the first one did not

The first edition of this document, earlier the same day, said *53 of 53 lines tie* and did not mention that a bank has 69 raw fields. Sixteen per bank were never compared, and the document did not say so — which is the exact failure these documents exist to prevent, committed by the document itself. The firm asked whether every base data point had really been done. It had not.

Chasing the missing sixteen found three faults in the provenance map, every one in a row already flagged [V] for verified:

- **Seven rows had no citation at all.** Their code column held the literal text (not in tie-out map) . The workbook landed a value and nothing recorded where it came from, so the tie-out — which only checks fields the map cites — walked straight past them.
- **Parentheses do not parse.** The expression reader has no notion of a bracketed group, so (C891+C893) - (C892+C894) silently became nothing. Written flat, it reads.
- **A bare code resolves against the balance-sheet prefixes only.** Right for a Schedule RC line, useless for an income-statement one, which needs RIAD . And the two capital ratios cited RCOA , the form-041 prefix, on twelve banks that all file 031, where it is RCFA .

Separately, the filing parser kept only whole numbers, discarding every **ratio** in every filing before any tie-out could see it. Dollar amounts are whole numbers, so nothing dollar-denominated ever looked wrong. The two capital ratios were in the XBRL the whole time, as fractions. They now agree three ways: the XBRL times 100, the rendered facsimile, and the workbook.

What is still not checked, by name

These 8 are ratios the FDIC computes from raw lines proved in this document. Checking them is arithmetic over figures already proved, and it is not done here — said plainly rather than left to inference: NCLNLSR, NTLNLSQR, LNATRESR, LNRESNCR, EQV, ROAQ, NIMY, EEFFR .

And one more, NTRENREQ , is blank for every bank because the FDIC publishes no quarterly figure for it. Its citation is recorded anyway, so the next reader does not repeat the hunt.

Every line

The evidence, line by line

For each line: the cell as it appears in the workbook, with Excel's own row numbers and column letters, then the row of the filed Call Report that carries the code the provenance map cites. Both in the same picture, so the comparison is one a reader can make rather than one they have to accept.

units: thousands of dollars

What this does not prove

- **One quarter.** These are the cells at 30 June 2026. The workbook holds sixteen quarters per bank and the other fifteen were not compared here.
- **Raw lines, not ratios.** Forty-eight of these are dollar amounts read straight off the form. Two are ratios the bank files itself. The FDIC's computed ratios — the ones built from these raw lines — are not checked here; they are arithmetic over numbers this document has just proved.
- **The provenance map is the thing being tested, and it passed.** Every code it cites was found on this bank's filing and every number matched. A code that is right for this filer and wrong for another would not show up here.

- **Nothing here was checked by a second person.**
