

Every line, tied

All 53 figures this monitor holds for KeyBank, each one shown twice: the cell in the workbook you can go and open, and the row on the bank's own filed Call Report. One hundred and forty-six pictures, and the comparison runs between them — not between the filing and something upstream of the workbook.

CELLS PICTURED

53 / 53

What is being compared, and why it changed. An earlier version of this roster compared the filing against a value the tool re-fetched from the FDIC's API as it ran. That proves the API agrees with the filing and says nothing about the number in the cell a person opens. The firm: *"your doc here needs to prove the external source to your workbook values not what you said landed. that's the standard."* The tool now reads the landed value out of the workbook's own raw block — Raw_FDIC, slot 9, row 164 — and refuses if that block has never been filled. Every comparison below is **the workbook against the filing**.

How each entry was built, mechanically. The workbook side is printed by Excel itself with row numbers and column letters showing, so the cell reference in the caption is one you can type into the Name Box. The filing side: a script searches the filing for the cited code, reads every word printed on the same row, checks the filed value is among them, rings the code in red and cuts the row out. If the value were not on that row the strip would be marked NOT verified rather than shown as evidence. None were: 93 of 93.

The five that first came back "could not" were chased, and all five closed. An earlier run reported two capital ratios and three quarterly charge-off flows as untieable. That was a statement about the first attempt, not about the filing. The capital ratios are printed on the filing's own Schedule RC-R as percentages; the quarterly flows are the difference between two consecutive filings, because charge-offs are reported from 1 January running. Both were then tied. They lead the roster below.

The five that were chased

Each was reported as COULD NOT, then attacked once. That is the difference between an obstacle and a verdict.

RBC1AAJ TIED was SKIPPED

Tier 1 leverage ratio -- core capital as a share of assets, with no adjustment for how risky those assets are. A regulatory minimum.

FILED: RC-R Pt I 31 Leverage ratio RCFA7204, Schedule RC-R Part I item 31

The filing prints this ratio itself, rounded to four decimal places. The tie-out skipped it because it refuses to compare a percentage with a dollar line -- correct, but it never looked for the filed percentage. It is there.
