

Origination analysis: the window and the workbook

Who this is for: the analyst preparing an origination analysis for a bank's line of business (LOB). No command line is needed. **What you finish with:** one workbook beside the loan extract. It holds your answers, a ranked list of the pockets that lose more than their share, losses set against revenue, and, if you ask for it, every pocket split by a third column and ranked again. **Walked:** 25 September 2026, on commit fec5f71, with a synthetic book of 8,000 loans. The book hides two things: a bad pocket (scores under 620 in the Broker channel), and borrowers carrying more revolving debt than usual for their score, who go bad 1.8 times as often. RANR has nothing planted in it. No real bank data was used.

What changed since the fifth walk:

- The lines on Control now decide the boxes on Losses vs revenue. A side whose own test says the gap could be luck keeps its box and says so in brackets (step 13).
- The suggested fewest loans is 5 expected losses, not 10 (71 loans here, not 141).
- Control has a **Last Run used** column (step 9), and the window has a Worked out from this book line (step 11).
- The Split tab states its method once, at the top (step 18). Grids that don't hold FICO fixed sit under a warning heading. The Three-way tab has a Holds FICO fixed? column, and those rows come last.
- Remembered band edges fill only a new workbook, and say so under Look first (steps 24 to 26). Clearing a cell forgets the edge.

Peach = where you answer (Excel). Grey = the window. Green = where you read the results. Nothing is typed at a command line.

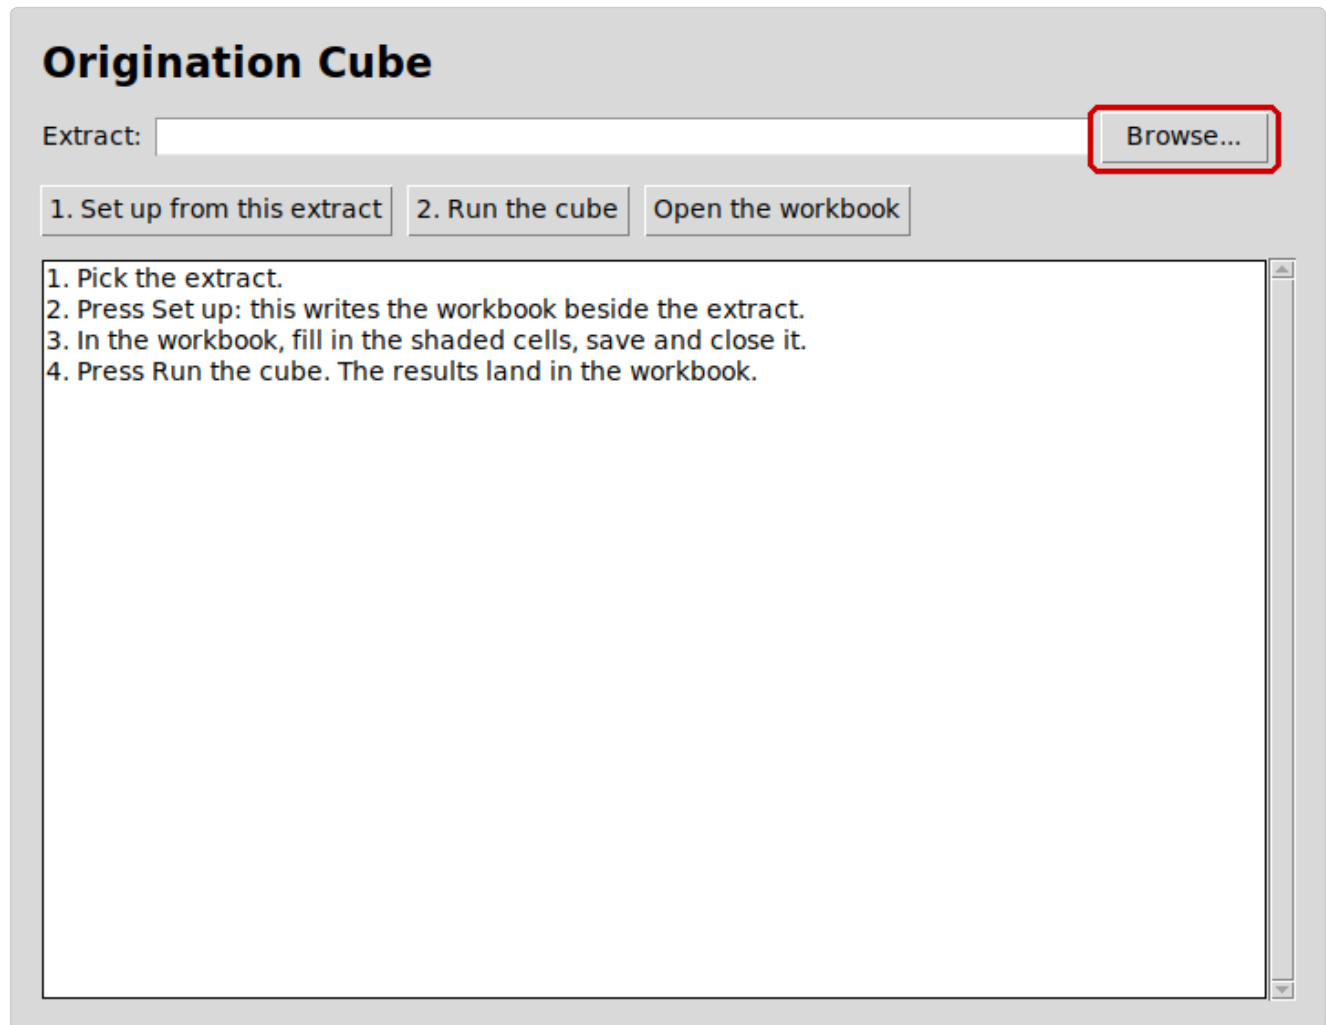

The route: two buttons in the window, one workbook in Excel.

Before you start

- **Python 3.10 or later**, and **Install add-ons.bat** run once. You only need to do this the first time.
- **Excel**.
- **The loan extract** (.csv or .xlsx) in its own folder. It needs a loan number, the booked amount, a yes/no outcome, GCO dollars and RANR dollars.

Step 1: Open the window

Double-click **Origination Cube.pyw** in the origination-cube folder.

Right: a window titled Origination Cube, an Extract box, **Browse...**, three buttons, and four numbered lines in the box underneath.

Step 2: Pick the extract

Press **Browse...** and pick the loan file, not the workbook.

Origination Cube

Extract:

[Browse...](#)

1. Set up from this extract

2. Run the cube

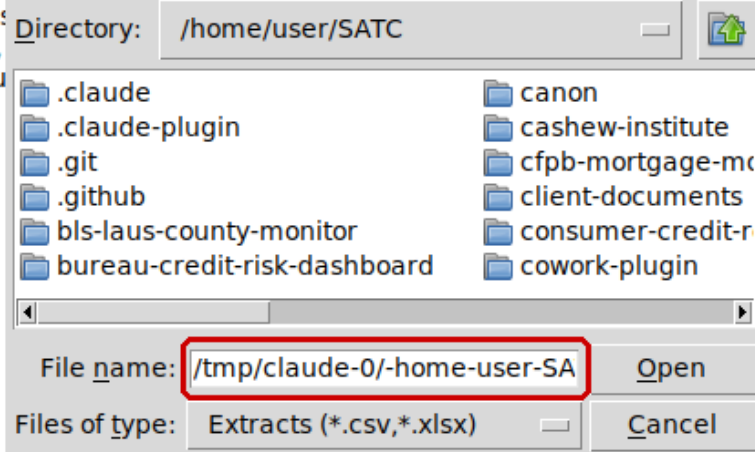

Open the workbook

1. Pick the extract.

2. Press Set up: this

3. In the workbook,

4. Press Run the cu

On Windows this is the usual Open dialog. The picture shows the same step on the test machine.

Origination Cube

Extract:

1. Pick the extract.
2. Press Set up: this writes the workbook beside the extract.
3. In the workbook, fill in the shaded cells, save and close it.
4. Press Run the cube. The results land in the workbook.

Right: the file name shows at the right-hand end of the Extract box.

Step 3: Press 1. Set up from this extract

Origination Cube

Extract:

Set up Consumer book Q3 - Origination Cube.xlsx from Consumer book Q3.csv: 8,000 loans, 9 columns.
7 columns to look at first, on the Columns tab.
Next: fill in the shaded cells on Control, Columns and Odd values, save, close, and press Run.

Right: "Set up Consumer book Q3 - Origination Cube.xlsx from Consumer book Q3.csv: 8,000 loans, 9 columns", then "7 columns to look at first", then "Next: fill in the shaded cells on Control, Columns and Odd values".

Check the loan count against what the bank sent. If it's wrong, you picked the wrong file.

Step 4: Open the workbook: Start here

Press **Open the workbook**. It opens on **Start here**.

Origination Cube

Set up from Consumer book Q3.csv: 8,000 loans, 9 columns.

Step	Where	What to do
1	Control	Fill in the shaded cells: materiality, minimum loans, how much worse counts.
2	Columns	Check each column's meaning and whether to cut by it. Set C3 to Yes when done.
3	Odd values	Answer real or missing. Unanswered ones are used as is.
4	Launcher	Save and close this workbook, then press Run the cube.

Where things stand

Calls still to make on Control	9
Things to look at first on Columns	7
Odd values found	2
Last run	not run yet

Right: four steps, and Where things stand: **9** calls to make on Control, 7 things to look at on Columns, 2 odd values, not run yet.

Step 5: Control: see what needs an answer

Click the **Control** tab.

Control center				
Fill in the shaded cells. The rest have starting values; change them if the population calls for it. Pick from the list, or type a number in the next column to override it. Changes apply on the next Run.				
Shaded = still needs an answer				
Setting	Choose	Or enter your own	In use	What it means
What the cube looks at				
How old a loan must be to count				Needs an answer before we run. Pick one, or enter your own.
How columns are recognised				
A number column with this many values or fewer is a category	12 values (recommended)		12 values	Term (36, 48, 60) or a grade from 1 to 10 is read as categories, not cut into bands.
A text column with more values than this is too fine to cut by	50 values (recommended)		50 values	State (50 or so) is still a dimension; a city or a dealer name is raised as a question instead.
How many bands a number column is cut into	5 bands (recommended)		5 bands	Fine enough to see a trend, with each band holding a fifth of the loans.
Where the band edges fall	Each band holds about the same number of loans (recommended)	n/a	Each band holds about the same number of loans	Every band can be tested equally well. Edges land on odd numbers like 663.
Is it enough loans to matter				
Fewest loans in a pocket before it is tested				Needs an answer before we run. Pick one, or enter your own.
Fewest loans with a loss before a loss rate is tested				Needs an answer before we run. Pick one, or enter your own.
Is it material				
Smallest excess loss worth reporting				Needs an answer before we run. Pick one, or enter your own.
Does it underperform				
What a pocket is judged against		n/a		Needs an answer before we run. Pick one from the list.
How much worse than its comparison a pocket must be				Needs an answer before we run. Pick one, or enter your own.
How much better than its comparison a pocket must be				Needs an answer before we run. Pick one, or enter your own.
How far revenue must move before it counts as more or less				Needs an answer before we run. Pick one, or enter your own.
Is it real				
How sure a difference must be before it counts				Needs an answer before we run. Pick one, or enter your own.
How often a real gap should be caught	80% of the time (recommended)		80% of the time	The usual standard. Used only to say how big a gap each pocket's size could show; it never flags anything.
Allowing for testing many pockets at once	Hold down the share of lucky finds (Benjamini-Hochberg) (recommended)	n/a	Hold down the share of lucky finds (Benjamini-Hochberg)	Of the pockets that pass, about 5% at 95% are expected to be luck. Suits scanning for leads.
loans				
Is it enough loans to matter				
Fewest loans in a pocket before it is tested				Needs an answer before we run. Pick one, or enter your own.
Fewest loans with a loss before a loss rate is tested				Needs an answer before we run. Pick one, or enter your own.
Is it material				
Smallest excess loss worth reporting				Needs an answer before we run. Pick one, or enter your own.
Does it underperform				
What a pocket is judged against		n/a		Needs an answer before we run. Pick one from the list.
How much worse than its comparison a				Needs an answer before we run. Pick one, or enter your own.

Right: nine rows are shaded peach. They are the calls the tool won't make for you. Three offer a number worked out from this book when you Run, marked (suggested) in their lists:

- **Fewest loans in a pocket before it is tested:** Enough for 5 expected losses.
- **How much worse** and **how much better:** What luck alone can move it.
- **How far revenue must move:** What luck alone can move it.

Nothing is picked for you.

Step 6: Columns: see what each column was taken to be

Click the **Columns** tab.

Columns							
Fix any meaning that's wrong, and set Cut by it to No for anything you don't want in the grids. Shaded rows have a reason under Look first. Set C3 to Yes when done; confirmed meanings carry over to the next extract.							
Checked every column? ☐							
Column	What it is	Cut by it? Yes means (outcome only)	Band edges (620; Show per 680 or every 20) pocket	Split pockets by it?	Look first	Why this was suggested	Blank Samples
LOAN_NBR	Loan number (key)					name contains 'loan'; a different value on every row	0% L0000000, L0000001, L0000002
FICO	FICO score	Yes			160 rows look odd (repeated value). Used as it is until you answer it on the Odd values tab.	name contains 'fico'; 98% of values between 300 and 850	0% -9999, 713, 716
CHANNEL	Category	Yes			suggested as Category from its shape alone (3 different values). If it's something more specific, say so and it will be remembered.	3 different values	0% Online, Broker, Branch
ORIG_BAL	Booked amount					name contains 'bal'; positive on every loan	0% 7655.75, 27999.47, 39684.43
BAD_FLAG	Outcome (yes/no)	Yes			1 value is neither 0 nor 1. They're left out of the outcome rates and counted; if they mean something, fix the extract.	name contains 'bad'; 0 and 1 (7.1% are 1)	0% 0, 2, 1
GCO_AMT	GCO dollars				1 value isn't a number among 7,999 that are. They're left out of any rate using this column and counted.	name contains 'gco'; zero on 93% of loans, never negative	0% 0.0, #N/A, 27620.62
RANR_AMT	RANR dollars				2,612 rows look odd (negatives). Used as it is until you answer it on the Odd values tab.	name contains 'ranr'; numbers	0% -165.2, 54.71, 38.01
ASSET_CLASS	Category	Yes			suggested as Category from its shape alone (4 different values). If it's something more specific, say so and it will be remembered.	4 different values	0% 1, 2, 4
REV_DEBT	Amount or number	Yes			suggested as Amount or number from its shape alone (numbers with 7,889 values). If it's something more specific, say so and it will be remembered.	numbers with 7,889 values	0% 15868.86, 12884.7, 8920.97

Columns							
Fix any meaning that's wrong, and set Cut by it to No for anything you don't want in the grids. Shaded rows have a reason under Look first. Set C3 to Yes when done; confirmed meanings carry over to the next extract.							
Checked every column? ☐							
Column	What it is	Cut by it? Yes means (outcome only)	Band edges (620; Show per 680 or every 20) pocket	Split pockets by it?	Look first		
LOAN_NBR	Loan number (key)						
FICO	FICO score	Yes			160 rows look odd (repeated value). Used as it is until you answer it on the Odd values tab.		
CHANNEL	Category	Yes			suggested as Category from its shape alone (3 different values). If it's something more specific, say so and it will be remembered.		
ORIG_BAL	Booked amount						
BAD_FLAG	Outcome (yes/no)	Yes			1 value is neither 0 nor 1. They're left out of the outcome rates and counted; if they mean something, fix the extract.		
GCO_AMT	GCO dollars				1 value isn't a number among 7,999 that are. They're left out of any rate using this column and counted.		
RANR_AMT	RANR dollars				2,612 rows look odd (negatives). Used as it is until you answer it on the Odd values tab.		
ASSET_CLASS	Category	Yes			suggested as Category from its shape alone (4 different values). If it's something more specific, say so and it will be remembered.		
REV_DEBT	Amount or number	Yes			suggested as Amount or number from its shape alone (numbers with 7,889 values). If it's something more specific, say so and it will be remembered.		

Right: one row per column, with a meaning in What it is and the reason beside it. Seven rows are shaded under **Look first**. Checked every column? (C3) is empty. **Band edges** takes edges (620; 680) or a width (every 20).

Step 7: Odd values, and Learned

Click **Odd values**.

Odd values				
Values that might be codes rather than real numbers. Answer real or missing (missing is treated as blank and counted). Unanswered ones are used as is.				
Column	What looks odd	Rows	Answer	Note
FICO	the value -9999 repeated far more than any other	160		
RANR_AMT	negative values in a column that is mostly positive	2,612		

Right: FICO's -9999 (160 rows) and RANR's negatives (2,612 rows), each with an Answer cell.

On the first extract **Learned** says Nothing learned yet.

Learned

Meanings and answers carried over from past runs. Set a row to Forget to drop it on the next Run, and the column waits on Columns for you to confirm it again.

Keep?	Kind	Column	What it learned	First confirmed	Last confirmed	Times
			Nothing learned yet.			

Step 8: If you press Run too early

Save, close and press **2. Run the cube** before answering, and nothing runs.

Origination Cube

Extract: a1-bd67-4db589c3cc31/scratchpad/walk6/book/Consumer book Q3.csv

Browse...

1. Set up from this extract

2. Run the cube

Open the workbook

Couldn't run yet. Fix these in the workbook, save, close, and press Run again:

- Control!C6: "How old a loan must be to count" needs an answer. Pick one, or enter your own in column D.
- Control!C13: "Fewest loans in a pocket before it is tested" needs an answer. Pick one, or enter your own in column D.
- Control!C14: "Fewest loans with a loss before a loss rate is tested" needs an answer. Pick one, or enter your own in column D.
- Control!C16: "Smallest excess loss worth reporting" needs an answer. Pick one, or enter your own in column D.
- Control!C18: "What a pocket is judged against" needs an answer. Pick one from the list.
- Control!C19: "How much worse than its comparison a pocket must be" needs an answer. Pick one, or enter your own in column D.
- Control!C20: "How much better than its comparison a pocket must be" needs an answer. Pick one, or enter your own in column D.
- Control!C21: "How far revenue must move before it counts as more or less" needs an answer. Pick one, or enter your own in column D.
- Control!C23: "How sure a difference must be before it counts" needs an answer. Pick one, or enter your own in column D.
- Columns!C3: set Checked every column to Yes once you've checked each column's meaning.

Right: "Couldn't run yet", then one line per thing to fix, naming the tab and cell. The same list goes to the **Log** tab.

Step 9: Fill in the shaded cells on Control

Click each shaded **Choose** cell and pick from its list, or type a number in **Or enter your own**. The walk took every suggestion:

Setting	Answer
How old a loan must be to count	Every loan

Setting	Answer
Fewest loans in a pocket before it is tested	Enough for 5 expected losses (suggested)
Fewest loans with a loss before a loss rate is tested	10 losses
Smallest excess loss worth reporting	1% of the book's total losses
What a pocket is judged against	The rest of its band
How much worse	What luck alone can move it (suggested)
How much better	What luck alone can move it (suggested)
How far revenue must move before it counts	What luck alone can move it (suggested)
How sure	95% sure

After the Run (step 11), Control has a **Last Run used** column (ringed). It shows the numbers the suggestions came out at: **71** loans, **1.34** and **0.75**, and revenue at **1.17x** and **0.85x**.

Control center					
Fill in the shaded cells. The rest have starting values; change them if the population calls for it. Pick from the list, or type a number in the next column to override it. Changes apply on the next Run.					
Shaded = still needs an answer					
Setting	Choose	Or enter your own	In use	What it means	Last Run used
What the cube looks at	Every loan		Every loan	New loans have not had time to go bad, so a pocket full of recent loans looks better than it is.	Every loan
How columns are recognised					
A number column with this many values or fewer is a category	12 values (recommended)		12 values	Term (36, 48, 60) or a grade from 1 to 10 is read as categories, not cut into bands.	
A text column with more values than this is too fine to cut by	50 values (recommended)		50 values	State (50 or so) is still a dimension; a city or a dealer name is raised as a question instead.	
How many bands a number column is cut into	5 bands (recommended)		5 bands	Fine enough to see a trend, with each band holding a fifth of the loans.	
Where the band edges fall	Each band holds about the same number of loans (recommended)	75/0	Each band holds about the same number of loans	Every band can be tested equally well. Edges land on odd numbers like 663.	
Is it enough loans to matter					
Fewest loans in a pocket before it is tested	Enough for 5 expected losses (suggested)		Enough for 5 expected losses (suggested)	Worked out from this book: the loans a pocket needs to expect 5 with the outcome at the book's rate, the textbook floor for testing a rate.	71 (worked out from this book)
Smallest excess loss worth reporting	1% of the book's total losses		1% of the book's total losses	Scales with the book, so the same setting works on any population.	1% of the book's total losses
Does it underperform					
What a pocket is judged against	The rest of its band	75/0	The rest of its band	Broker under 620 against the rest of under 620. Both comparisons are printed; this one decides the flag.	The rest of its band
How much worse than its comparison a pocket must be	What luck alone can move it (suggested)		What luck alone can move it (suggested)	Worked out from this book: the gap luck alone can make in a pocket of typical size. A smaller gap can't be told from noise.	1.34 (worked out from this book)
How much better than its comparison a pocket must be	What luck alone can move it (suggested)		What luck alone can move it (suggested)	The same as above, the other way: one over the gap luck alone can make in a pocket of 0.75 (worked out from this book) typical size.	0.75 (worked out from this book)
How far revenue must move before it counts as more or less	What luck alone can move it (suggested)		What luck alone can move it (suggested)	Worked out from this book: the revenue gap luck alone can make in a pocket of typical size. Revenue inside that gap reads as about the same.	1.17x and 0.85x
How sure a difference must be before it counts	95% sure		95% sure	The usual standard. About 1 pocket in 20 with no real difference will still pass.	95% sure
How often a real gap should be caught	80% of the time (recommended)		80% of the time	The usual standard. Used only to say how big a gap each pocket's size could show; it never flags anything.	80% of the time
Allowing for testing many pockets at once	Hold down the share of lucky finds (Benjamin-Hochberg) (recommended)	75/0	Hold down the share of lucky finds (Benjamin-Hochberg)	Of the pockets that pass, about 5% are expected to be luck. Suits scanning for leads.	Hold down the share of lucky finds (Benjamin-Hochberg)
Enough for 5 expected losses (suggested)	Worked out from this book: the loans a pocket needs to expect 5 with the outcome at the book's rate, the textbook floor for testing a rate.				71 (worked out from this book)
10 losses	A loss rate rests on how many loans lost money, not how many a pocket holds. Ten is a common floor.				10 losses
1% of the book's total losses	Scales with the book, so the same setting works on any population.				1% of the book's total losses
The rest of its band	Broker under 620 against the rest of under 620. Both comparisons are printed; this one decides the flag.				The rest of its band
What luck alone can move it (suggested)	Worked out from this book: the gap luck alone can make in a pocket of typical size. A smaller gap can't be told from noise.				1.34 (worked out from this book)
What luck alone can move it (suggested)	The same as above, the other way: one over the gap luck alone can make in a pocket of 0.75 (worked out from this book) typical size.				0.75 (worked out from this book)
What luck alone can move it (suggested)	Worked out from this book: the revenue gap luck alone can make in a pocket of typical size. Revenue inside that gap reads as about the same.				1.17x and 0.85x
95% sure	The usual standard. About 1 pocket in 20 with no real difference will still pass.				95% sure

Scroll right to see it. It sits past What it means and a hidden column, and it isn't printed: the tab's print area stops at What it means. This is how the printed tab looks:

Control center

Fill in the shaded cells. The rest have starting values; change them if the population calls for it. Pick from the list, or type a number in the next column to override it. Changes apply on the next Run.

In use still repeats the option's name, "(suggested)" included.

Step 10: Confirm the columns and answer the odd values

On **Columns**, check each What it is, then set **Checked every column? (C3)** to **Yes**.

Columns

For any meaning that's wrong, and set Cut by it to No for anything you don't want in the grids. Shaded rows have a reason under Look first. Set C3 to Yes when done; confirmed meanings carry over to the next extract.

Checked every column? Yes

Column	What it is	Cut by it? Yes means (outcome only)	Band edges (620; Show per 680 or every 20) pocket	Split pockets by it?	Look first	Why this was suggested	Blank	Samples
LOAN_NBR	Loan number (key)					name contains 'loan'; a different value on every row	0%	L0000000, L0000001, L0000002
FICO	FICO score	Yes			160 rows look odd (repeated value). Used as it is until you answer it on the Odd values tab.	name contains 'fico'; 98% of values between 300 and 850	0%	-9999, 713, 716
CHANNEL	Category	Yes			suggested as Category from its shape alone (3 different values). If it's something more specific, say so and it will be remembered.	3 different values	0%	Online, Broker, Branch
ORIG_BAL	Booked amount	Yes			1 value is neither 0 nor 1. They're left out of the outcome rates and counted; if they mean something, fix the extract.	name contains 'bal'; positive on every loan	0%	7655.75, 27999.47, 39684.43
BAD_FLAG	Outcome (yes/no)				1 value isn't a number among 7,999 that are. They're left out of any rate using this column and counted.	name contains 'bad'; 0 and 1 (7.1% are 1)	0%	0, 2, 1
GCO_AMT	GCO dollars					name contains 'gco'; zero on 93% of loans, never negative	0%	0.0, #N/A, 27620.62
RANR_AMT	RANR dollars				2,612 rows look odd (negatives). Used as it is until you answer it on the Odd values tab.	name contains 'ranr'; numbers	0%	-165.2, 54.71, 38.01
ASSET_CLASS	Category	Yes			suggested as Category from its shape alone (4 different values). If it's something more specific, say so and it will be remembered.	4 different values	0%	1, 2, 4
REV_DEBT	Amount or number	Yes			suggested as Amount or number from its shape alone (numbers with 7,889 values). If it's something more specific, say so and it will be remembered.	numbers with 7,889 values	0%	15868.86, 12884.7, 8920.97

On **Odd values**, the walk said FICO's -9999 is **missing** and RANR's negatives are **real**.

Odd values

Values that might be codes rather than real numbers. Answer real or missing (missing is treated as blank and counted). Unanswered ones are used as is.

Column	What looks odd	Rows	Answer	Note
FICO	the value -9999 repeated far more than any other	160 missing		
RANR_AMT	negative values in a column that is mostly positive	2,612 real		

Step 11: Save, close, and press 2. Run the cube

Origination Cube

Extract:

Ran on 8,000 loans from Consumer book Q3.csv; 132 tie-out checks agree.
Worst for Outcome, share of loans: FICO under 654 / CHANNEL Broker.
Worst for Outcome, share of booked dollars: FICO under 654 / CHANNEL Broker.
Worst for GCO per booked dollar: FICO under 654 / CHANNEL Broker.
Worst for RANR per booked dollar: REV DEBT 6,559 to under 9,837 / CHANNEL Broker.
Worked out from this book: fewest loans 71; worse at 1.34x; better at 0.75x.
Open Consumer book Q3 - Origination Cube.xlsx: start with where it bleeds.

Right:

- "Ran on 8,000 loans from Consumer book Q3.csv; 132 tie-out checks agree."
- one Worst for line per measure. For the three loss measures it's **FICO under 654 / CHANNEL Broker**, the planted pocket seen through five equal bands.
- "Worked out from this book: fewest loans 71; worse at 1.34x; better at 0.75x." (ringed).
The revenue line isn't in it.

The Worst for RANR line is noise: the test data plants nothing in RANR.

If this line appears when you typed your own fewest loans, check it. It says "worked out" even when nothing could be (see wrong turn S).

Step 12: Read Where it bleeds

Where it bleeds														
Pockets losing more than their share (RANK, earning less), largest first. The flag compares each pocket with the rest of its band. Red: worse. Amber: worse, but could be luck. "Luck alone" is how often a gap this big turns up with no real difference behind it, after the allowance for testing many pockets within each grid (see Check).

Where it bleeds														
Pockets losing more than their share (RANK, earning less), largest first. The flag compares each pocket with the rest of its band. Red: worse. Amber: worse, but could be luck. "Luck alone" is how often a gap this big turns up with no real difference behind it, after the allowance for testing many pockets within each grid (see Check).														
Measure	Band column Band	Segment column Segment	Loans	Rate	Book rate	Excess	Excess is in	Material	Vs rest of book	Luck alone	Vs rest of band	Luck alone	Flag (vs the rest of its band)	Smallest gap it could show
Outcome, share of loans	FICO	under 654	CHANNEL	Broker	523	24.47%	7.13%	90.7 loans	yes	4.14x	under 0.01%	2.38x	under 0.01% worse	1.47x or more
Outcome, share of loans	REV_DEBT	17,187 and over	CHANNEL	Broker	392	22.29%	7.13%	76.9 loans	yes	3.65x	under 0.01%	2.01x	under 0.01% worse	1.48x or more
Outcome, share of loans	FICO	under 654	ASSET_CLASS	4	392	20.41%	7.13%	52.1 loans	yes	3.17x	under 0.01%	1.54x	3.8% worse	1.55x or more

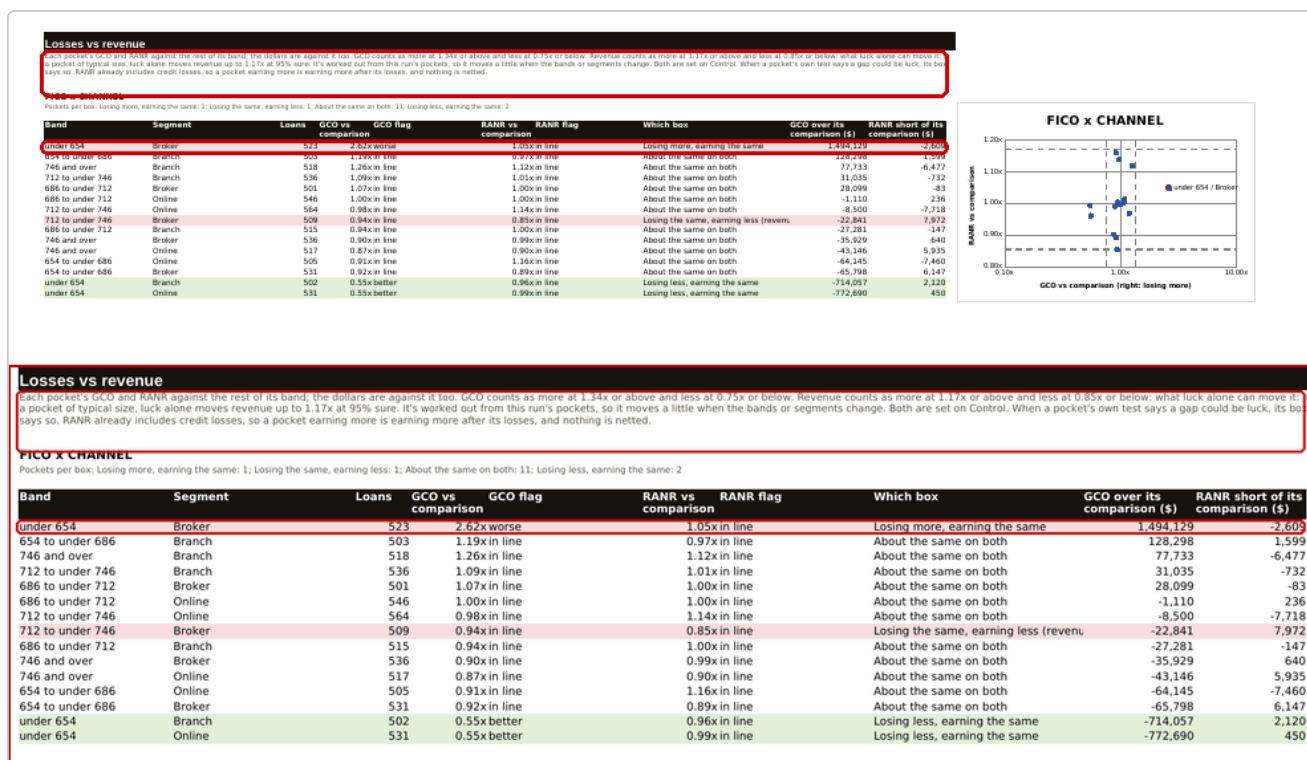

Right: the first row is FICO under 654 / Broker: 523 loans, 24.47% bad against a book of 7.13%, 90.7 loans of excess, 4.14x the rest of the book, 2.38x the rest of its band, **worse**.

How to read a row:

- **Red** rows are worse and the test says it isn't luck. **Amber** rows are worse but could be luck.
- **The flag** uses the comparison chosen in step 9 and the how much worse line (1.34x here).
- **Luck alone** is how often a gap this big turns up with no real difference, after the allowance for testing many pockets.
- **Smallest gap it could show** is what a pocket of that size can reliably find.

Step 13: Losses vs revenue

Every pocket at or above the fewest-loans line (71 here) goes in one of nine boxes. There's one block and one chart per grid.

Right:

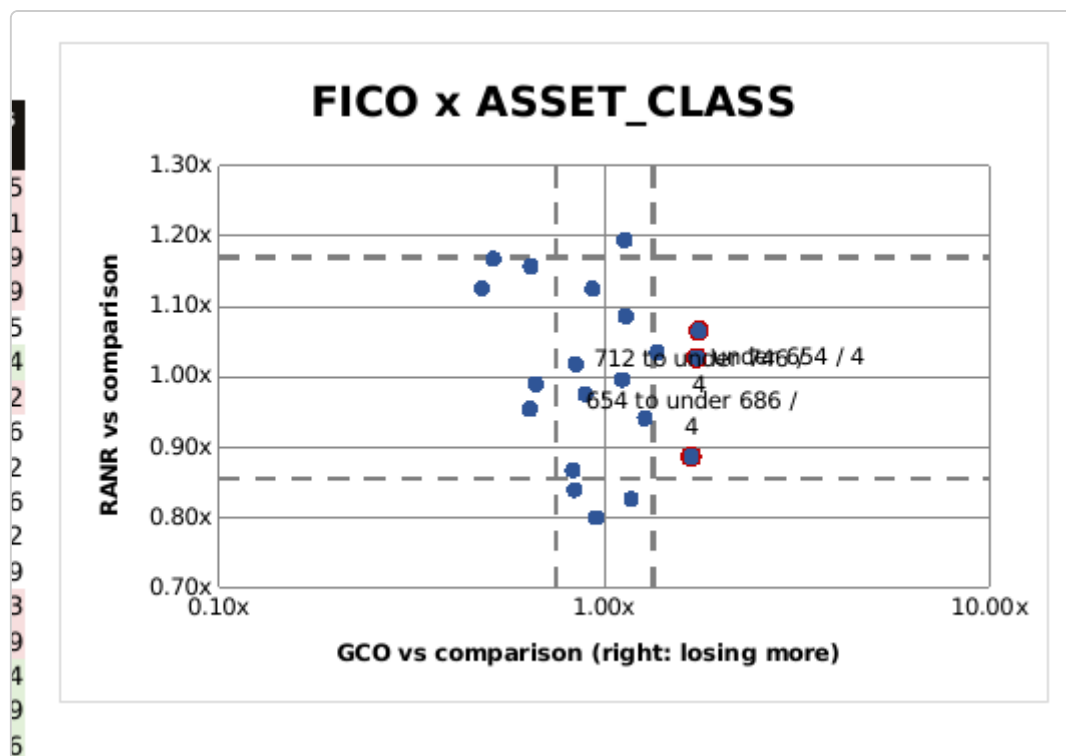

- The subtitle gives the lines: GCO at **1.34x** and **0.75x**, revenue at **1.17x** and **0.85x**. It says a box notes when a pocket's own test calls the gap luck.
- FICO under 654 / Broker (ringed) reads **Losing more, earning the same**: GCO 2.62x the rest of its band, RANR 1.05x.
- The dollars use the same comparison as the box, and rows sort by them.

Read the whole box, and widen the Which box column first. A box can end in "(loss gap could be luck)", "(revenue gap could be luck)" or "(both gaps could be luck)". At the column's width that part is cut off, so it reads "(loss g" or "(revenu". Shading and the Pockets per box count don't tell them apart. On this run 43 of 104 boxes carry one (defect 2):

FICO x ASSET_CLASS									
Pockets per box: Losing more, earning the same: 4; Losing the same, earning less: 3; About the same on both: 7; Losing the same, earning more: 1; Losing less, earning the same: 5									
Band	Segment	Loans	GCO vs comparison	GCO flag	RANR vs comparison	RANR flag	Which box	GCO over its comparison (\$)	RANR short of its comparison (\$)

746 and over	3	385	0.83x in line		0.87x in line		About the same on both	-43,059	5,959
under 654	3	350	0.95x in line		0.80x in line		Losing the same, earning less (revenu	-46,186	8,053
712 to under 746	2	430	0.84x in line		0.84x in line		Losing the same, earning less (revenu	-51,200	7,609
712 to under 746	3	392	0.48x better, but could be luck		1.13x in line		Losing less, earning the same (loss ga	-158,205	-4,784
686 to under 712	2	395	0.52x better, but could be luck		1.17x in line		Losing less, earning the same (loss ga	-180,327	-6,339
654 to under 686	2	355	0.67x better, but could be luck		0.99x in line		Losing less, earning the same (loss ga	-180,664	366

The RANR flag and the box can disagree. The flag uses the loss lines (0.75x); the box uses the revenue line (0.85x). 686 to under 712 / asset class 4 has RANR at 0.83x: its flag says in line, its box earning less, and it's shaded red (defect 3).

The chart plots the same pockets, with the Control lines dashed. Pockets in a Losing more box are named:

Other revenue lines. Change How far revenue must move on Control, save, close and Run. The boxes now move with the line, as each option's explanation says:

Revenue line	More / less at	Earning more	Earning less	Planted pocket
What luck alone can move it	1.17x / 0.85x	2 (all marked luck)	8 (7 marked luck)	Losing more, earning the same
5 percent either way	1.05x / 0.95x	33 (all marked)	29 (28 marked)	the same
10 percent either way	1.10x / 0.90x	20 (all marked)	15 (14 marked)	the same
The same lines as for losses	1.33x / 0.75x	0	1	the same
Your own: 0.15	1.15x / 0.85x	6 (all marked)	7 (6 marked)	the same

RANR has nothing planted, so every earning more or less above is noise; the marks say so.

The GCO lines move the boxes too. With 1.25 and 0.8, 23 pockets read Losing more (19 marked luck); with 1.34 and 0.75, 18 (14 marked); with 2 and 0.5, 2.

With 5% either way:

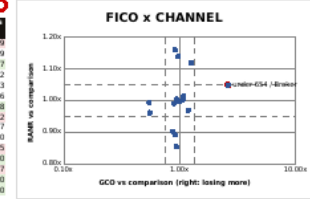

Losses vs revenue

Each pocket's GCO and RANR against the rest of its band: the dollars are against it too. GCO counts as more at 1.34x or above and less at 0.75x or below. Revenue counts as more at 1.05x or above and less at 0.95x or below. 5% either way. Both are set to Control. When a pocket's own test says a gap could be luck, its box says so. RANR already includes credit losses, so a pocket earning more is earning more after its losses, and nothing is netted.

FICO x CHANNEL

Each pocket's GCO and RANR against the rest of its band: the dollars are against it too. GCO counts as more at 1.34x or above and less at 0.75x or below. Revenue counts as more at 1.05x or above and less at 0.95x or below. 5% either way. Both are set to Control. When a pocket's own test says a gap could be luck, its box says so. RANR already includes credit losses, so a pocket earning more is earning more after its losses, and nothing is netted.

Step 15: Materiality

Materiality

What each materiality level would keep: how many pockets, and how much of the grid's excess they hold. The level itself is set on Control.

FICO x CHANNEL: Outcome, share of loans

In use: 5.7 loans

Share of the book's loans with the outcome	Excess at or over (loans)	Pockets kept	Share of the grid's excess
0.5%	2.9	7	100%
1.0%	5.7	4	92%
2.0%	11.4	3	86%
5.0%	28.5	1	63%
10.0%	57.0	1	63%

FICO x CHANNEL: Outcome, share of booked dollars

In use: 178,222 ORIG_BAL dollars

Share of the book's ORIG_BAL on loans with the	Excess at or over (ORIG_BAL dollars)	Pockets kept	Share of the grid's excess
0.5%	89,111	5	97%
1.0%	178,222	4	94%
2.0%	356,445	3	88%
5.0%	891,112	1	65%
10.0%	1,782,225	1	65%

FICO x CHANNEL: GCO per booked dollar

In use: 99,554 GCO_AMT dollars

Share of the book's total GCO_AMT	Excess at or over (GCO_AMT dollars)	Pockets kept	Share of the grid's excess
0.5%	49,777	6	99%
1.0%	99,554	4	95%
2.0%	199,107	3	87%

Right: for FICO x CHANNEL: Outcome, share of loans, the level in use is 5.7 loans (1% of the book's bad loans): 4 pockets, 92% of the excess.

Step 16: Check

Check records what the run did, including the worked-out numbers (ringed).

Check

Settings used, tie-outs, and what was left out.

Extract	Consumer book Q3.csv
Loans run	8,000
Record of this run	Consumer book Q3 - Origination Cube - what ran.yaml, beside this workbook: every setting the run used, kept for the file. It is replaced by the next Run.
Tie-out checks	132 of 132 agree: every grid adds up to the book
Left out of Outcome, share of loans	1 x BAD_FLAG flag not 0 or 1
Left out of Outcome, share of booked dollars	1 x ORIG_BAL blank; 1 x BAD_FLAG flag not 0 or 1
Left out of GCO per booked dollar	1 x GCO_AMT not a number; 1 x ORIG_BAL blank
Left out of RANR per booked dollar	1 x ORIG_BAL blank
Band edges used: FICO	654; 686; 712; 746 (5 bands)
Band edges used: ORIG_BAL	15,449; 26,324; 37,951; 49,152 (5 bands)
Band edges used: REV_DEBT	6,559; 9,837; 13,051; 17,187 (5 bands)
Loans needed for a 1.34x gap: Outcome, share of loans	about 971
Loans needed for a 1.34x gap: Outcome, share of booked dollars	about 1,219
Loans needed for a 1.34x gap: GCO per booked dollar	about 1,305
Loans needed for a 1.34x gap: RANR per booked dollar	about 228
Materiality line: Outcome, share of loans	5.7 loans
Materiality line: Outcome, share of booked dollars	178,222 ORIG_BAL dollars
Materiality line: GCO per booked dollar	99,554 GCO_AMT dollars
Materiality line: RANR per booked dollar	8,288 RANR_AMT dollars
Worked out from this book	fewest loans 71 (enough to expect 5 with the outcome at the book's rate of 7.13%); worse at 1.34x; better at 0.75x (the outcome gap luck alone can make in a pocket of typical size)
The allowance for many tests covers	each grid and measure on its own, one comparison at a time (the firm's call, 25 Sep 2026)
Revenue counts as more or less at	1.17x and 0.85x: what luck alone can move it: in a pocket of typical size, luck alone moves revenue up to 1.17x at 95% sure. It's worked out from this run's pockets, so it moves a little when the bands or segments change
How old a loan must be to count	Every loan
Fewest loans in a pocket before it is tested	71
Fewest loans with a loss before a loss rate is tested	10 losses
Smallest excess loss worth reporting	1% of the book's total losses
What a pocket is judged against	The rest of its band
How much worse than its comparison a pocket must be	1.34
How much better than its comparison a pocket must be	0.75
How far revenue must move before it counts as more or less	What luck alone can move it
How sure a difference must be before it counts	95% sure

Materiality line: RANR per booked dollar 0,288 RANR_AMT dollars

Worked out from this book fewest loans 71 (enough to expect 5 with the outcome at the book's rate of 7.13%); worse at 1.34x; better at 0.75x (the outcome gap luck alone can make in a pocket of typical size)

The allowance for many tests covers each grid and measure on its own, one comparison at a time (the firm's call, 25 Sep 2026)

Revenue counts as more or less at 1.17x and 0.85x: what luck alone can move it: in a pocket of typical size, luck alone moves revenue up to 1.17x at 95% sure. It's worked out from this run's pockets, so it moves a little when the bands or segments change

How old a loan must be to count Every loan

Right:

- "Worked out from this book: fewest loans 71 (enough to expect 5 with the outcome at the book's rate of 7.13%); worse at 1.34x; better at 0.75x".
- "Revenue counts as more or less at 1.17x and 0.85x: what luck alone can move it".
- "132 of 132 agree".

The record beside the workbook (... - what ran.yaml) now opens with "# revenue_line worked out from this book: 1.17x and 0.85x".

Step 17: Log, and Start here

Log

Every Run and every refusal, newest first.

2026-09-25 19:36 Ran on 8,000 loans from Consumer book Q3.csv; 132 tie-out checks agree.

2026-09-25 19:36 Couldn't run. Fix these, save, close, and press Run again:
Control!C6: "How old a loan must be to count" needs an answer. Pick one, or enter your own in column D.
Control!C13: "Fewest loans in a pocket before it is tested" needs an answer. Pick one, or enter your own in column D.
Control!C14: "Fewest loans with a loss before a loss rate is tested" needs an answer. Pick one, or enter your own in column D.

Control!C16: "Smallest excess loss worth reporting" needs an answer. Pick one, or enter your own in column D.
Control!C18: "What a pocket is judged against" needs an answer. Pick one from the list.
Control!C19: "How much worse than its comparison a pocket must be" needs an answer. Pick one, or enter your own in column D.
Control!C20: "How much better than its comparison a pocket must be" needs an answer. Pick one, or enter your own in column D.
Control!C21: "How far revenue must move before it counts as more or less" needs an answer. Pick one, or enter your own in column D.
Control!C23: "How sure a difference must be before it counts" needs an answer. Pick one, or enter your own in column D.

Columns!C3: set Checked every column to Yes once you've checked each column's meaning.

Start here now shows 0 calls, and the last run:

Origination Cube

Last run on 8,000 loans from Consumer book Q3.csv.

Step	Where	What to do
1	Control	Fill in the shaded cells: materiality, minimum loans, how much worse counts.
2	Columns	Check each column's meaning and whether to cut by it. Set C3 to Yes when done.
3	Odd values	Answer real or missing. Unanswered ones are used as is.
4	Launcher	Save and close this workbook, then press Run the cube.

Where things stand

Calls still to make on Control	0
Things to look at first on Columns	0
Odd values found	2
Last run	2026-09-25 19:36: Ran on 8,000 loans from Consumer book Q3.csv; 132 tie-out checks agree.

Step 18: Split every pocket by a number (revolving debt)

On **Columns**, set **Split pockets by it?** to **Yes** on REV_DEBT. Save, close, and Run.

Columns

Fix any meaning that's wrong, and set Cut by it to No for anything you don't want in the grids. Shaded rows have a reason under Look first. Set C3 to Yes when done; confirmed meanings carry over to the next extract.

Checked every column? Yes

Column	What it is	Cut by it? Yes means (outcome only)	Band edges (620; Show per 680 or every 20) pocket	Split pockets by it?	Look first	Why this was suggested	Blank	Samples
LOAN_NBR	Loan number (key)					name contains 'loan'; a different value on every row	0%	L0000000, L0000001, L0000002
FICO	FICO score	Yes			160 rows look odd (repeated value). Used as it is until you answer it on the Odd values tab.	name contains 'fico'; 98% of values between 300 and 850	0%	-9999, 713, 716
CHANNEL	Category	Yes			suggested as Category from its shape alone (3 different values). If it's something more specific, say so and it will be remembered.	3 different values	0%	Online, Broker, Branch

Origination Cube

Extract:

[Browse...](#)

1. Set up from this extract

2. Run the cube

[Open the workbook](#)

Ran on 8,000 loans from Consumer book Q3.csv; 581 tie-out checks agree.
Worst for Outcome, share of loans: FICO under 654 / CHANNEL Broker.
Worst for Outcome, share of booked dollars: FICO under 654 / CHANNEL Broker.
Worst for GCO per booked dollar: FICO under 654 / CHANNEL Broker.
Nothing is worse for RANR per booked dollar at these settings.
Worked out from this book: fewest loans 71; worse at 1.34x; better at 0.75x.
Split by REV_DEBT: each pocket halved at its own median. See the Split and Three-way tabs.
REV_DEBT isn't cut on its own while it splits.
Open Consumer book Q3 - Origination Cube.xlsx: start with where it bleeds.

Right: "581 tie-out checks agree" and "Split by REV_DEBT: each pocket halved at its own median."

Split opens with **How this tab works:** what it does, what High half vs low means, what Luck alone means, how the pockets are pooled, and what it assumes. Read it once.

Split

Every pocket split in two at its own median REV_DEBT. How the tab works comes first, then each grid: what it holds fixed, a summary, and the pockets as heat maps.

How this tab works

What it does	Inside each pocket (one band, one segment) the loans are sorted by REV_DEBT and cut at that pocket's own median. The high half is compared with the low half, so the band and segment are the same on both sides. REV_DEBT isn't cut into bands of its own while it splits.
High half vs low	The high half's rate divided by the low half's. 2.00x means the high half goes bad, or loses, twice as often. For RANR, above 1.00x means the high half earns more.
Luck alone	How often a gap this big turns up by chance when there's no real difference. The test weighs the gap against how much each half's rate wobbles at its size. The figures are after the allowance for many tests (Benjamin-Hochberg), taken across the pockets of one grid and one measure. Blank: a half has fewer loans or losses than the minimums on Control (71 loans, 10 losses).
Pooled across pockets	The high halves' actual total against what it would be at their low halves' rates, added over every pocket, with its range at 95% sure. For the yes/no outcome the odds are pooled too (Mantel-Haenszel), and Cochran's Q checks whether the gap is about the same size in every pocket.
What it assumes	A grid holds fixed only its band and segment. Anything REV_DEBT moves with that the grid doesn't hold fixed can show up here as a REV_DEBT effect, so each grid gives the correlation, and grids that hold fixed what REV_DEBT moves with most come first. Inside a band the score still varies a little, so a little can remain even there. Loans are treated as independent of each other.

FICO x CHANNEL

This grid holds FICO fixed (REV_DEBT's correlation with it: -0.53). It doesn't hold ORIG_BAL fixed. REV_DEBT's correlation with ORIG_BAL is -0.02: 0 means unrelated, and the further from 0, the more of this gap may be ORIG_BAL.

Measure	Pockets tested	High half worse in	High vs low, pooled	Range (95%)	Luck alone	As odds	Same size in every pocket?
Outcome, share of loans	15	14 of 15	1.95x	1.72x to 2.19x	under 0.01%	2.10x	yes
Outcome, share of booked dollars	15	15 of 15	2.07x	1.80x to 2.34x	under 0.01%		
GCO per booked dollar	15	14 of 15	2.06x	1.78x to 2.33x	under 0.01%		
RANR per booked dollar	15	5 of 15	1.05x	0.98x to 1.13x	17.7%		

Then each grid gets one line on what it holds fixed, a summary table and heat maps. For FICO x CHANNEL the high-debt half goes bad **1.95 times** as often as the low half (1.72x to 2.19x), worse in 14 of 15 pockets. The planted effect is 1.8x.

FICO x CHANNEL

This grid holds FICO fixed (REV_DEBT's correlation with it: -0.53). It doesn't hold ORIG_BAL fixed. REV_DEBT's correlation with ORIG_BAL is -0.02: 0 means unrelated, and the further from 0, the more of this gap may be ORIG_BAL.

Measure	Pockets tested	High half worse in	High vs low, pooled	Range (95%)	Luck alone	As odds	Same size in every pocket?
Outcome, share of loans	15	14 of 15	1.95x	1.72x to 2.19x	under 0.01%	2.10x	yes
Outcome, share of booked dollars	15	15 of 15	2.07x	1.80x to 2.34x	under 0.01%		
GCO per booked dollar	15	14 of 15	2.06x	1.78x to 2.33x	under 0.01%		
RANR per booked dollar	15	5 of 15	1.05x	0.98x to 1.13x	17.7%

Grids that don't hold FICO fixed come after a dark red heading: "Grids that don't hold FICO fixed. REV_DEBT moves with FICO (correlation -0.53), so part of every gap below may be FICO, not REV_DEBT." **Don't quote the numbers under it.** On a book with no debt effect they still read 1.62x, under 0.01% (defect 5).

Grids that don't hold FICO fixed. REV_DEBT moves with FICO (correlation -0.53), so part of every gap below may be FICO, not REV_DEBT.

ORIG_BAL x CHANNEL

This grid holds ORIG_BAL fixed (REV_DEBT's correlation with it: -0.02). It doesn't hold FICO fixed. REV_DEBT's correlation with FICO is -0.53: 0 means unrelated, and the further from 0, the more of this gap may be FICO.

Measure	Pockets tested	High half worse in	High vs low, pooled	Range (95%)	Luck alone	As odds	Same size in every pocket?
Outcome, share of loans	15	15 of 15	2.55x	2.26x to 2.83x	under 0.01%	2.73x	yes
Outcome, share of booked dollars	15	15 of 15	2.59x	2.27x to 2.91x	under 0.01%		
GCO per booked dollar	15	15 of 15	2.61x	2.28x to 2.95x	under 0.01%		
RANR per booked dollar	15	7 of 15	1.02x	0.94x to 1.09x	64.9%		

Three-way ranks every band / segment / half pocket. The last column, **Holds FICO fixed?**, reads yes or no: part of this may be FICO. Within each measure the no rows come last.

Three-way

Header grid for FICO, REV_DEBT, each tested for any other pocket. REV_DEBT moves with FICO (correlation -0.53). 20 pockets from grids that don't hold FICO fixed this last column does not flag those FICO better than REV_DEBT; they come after the last. Each row, using more than their share (black). Gaining odds, larger size. The flag compares each pocket with the rest of its band. Red: worse. Amber: worse, but could be luck. "Luck alone" is how often a gap this big turns up with no real difference behind it, after the allowance for testing many pockets within each grid (see Check).

(blank)		0.00%			0.00%

Step 21: Your own band edges, or a band width

Edges: type 620; 680; 740 in FICO's **Band edges** cell, with semicolons. Save, close, and Run.

Origination Cube

Extract:

Ran on 8,000 loans from Consumer book Q3.csv; 132 tie-out checks agree.

Worst for Outcome, share of loans: FICO under 620 / CHANNEL Broker.

Worst for Outcome, share of booked dollars: FICO under 620 / CHANNEL Broker.

Worst for GCO per booked dollar: FICO under 620 / CHANNEL Broker.

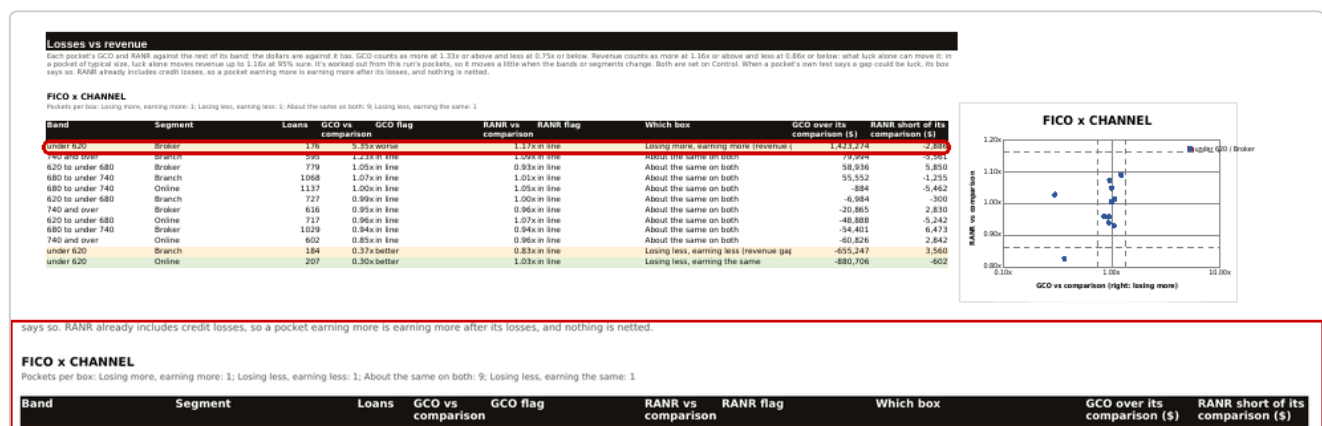

Worst for RANR per booked dollar: REV_DEBT 6,559 to under 9,837 / CHANNEL Broker.

Worked out from this book: fewest loans 71; worse at 1.33x; better at 0.75x.

Open Consumer book Q3 - Origination Cube.xlsx: start with Where it bleeds.

Right: the worst pocket is **FICO under 620 / Broker:** 176 loans, GCO 5.35x the rest of its band.

On Losses vs revenue it reads "Losing more, earning more (revenue g...)". Its RANR is 1.17x against a revenue line of 1.16x worked out on this run, and its RANR flag says in line. The cut-off part is "(revenue gap could be luck)". Read it as losing more, earning the same (defect 1).

A width: type every 20 instead.

Columns

Fix any meaning that's wrong, and set Cut by it to No for anything you don't want in the grids. Shaded rows have a reason under Look first. Set C3 to Yes when done; confirmed meanings carry over to the next extract.

Checked every column? Yes

On Losses vs revenue, 600 to under 620 / Broker also reads Losing more, earning more (revenue gap could be luck):

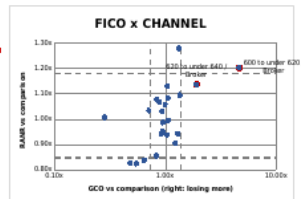

Losses vs revenue

Each pocket's GCO and RANR against the rest of its band. The dollars are against it too. GCO counts as more at 1.37x or above and less at 0.73x or below. Revenue counts as more at 1.38x or above and less at 0.85x or below. What look alone can move it: in a pocket of typical size, look alone moves revenue up to 1.18x or 95% more. It's worked out from the run's pockets, so it moves a little when the bands or segments change. Both are set on Control. When a pocket's own test says a gap could be lost, its test says so. RANR already includes credit losses, so a pocket earning more is earning more after its losses, and nothing is netted.

FICO x CHANNEL

Pockets per box: Losing more, earning the same: 1; Losing more, earning more: 1; Losing less, earning less: 3; About the same on both: 15; Losing the same, earning more: 1; Losing less, earning the same: 2; Not tested: too few loans or losses: 7

Step 22: Press Set up again

Press **1. Set up from this extract** again.

Origination Cube

Extract:

[Browse...](#)

1. Set up from this extract

2. Run the cube

Open the workbook

Set up Consumer book Q3 - Origination Cube.xlsx from Consumer book Q3.csv: 8,000 loans, 9 columns.

2 columns to look at first, on the Columns tab. Everything is answered. Press Run the cube.

Right: "Everything is answered. Press Run the cube." Control, Columns and Odd values answers are kept, and so are the last results. Band edges typed on other workbooks are **not** written in: before this Set up another copy had left REV_DEBT every 2000 in the memory, and this workbook's REV_DEBT stays blank.

Columns

Fix any meaning that's wrong, and set Cut by it to No for anything you don't want in the grids. Shaded rows have a reason under Look first. Set C3 to Yes when done; confirmed meanings carry over to the next extract.

Checked every column? Yes

Column	What it is	Cut by it? Yes means (outcome only)	Band edges (620; Show per 680 or every 20) pocket	Split pockets by it?	Look first	Why this was suggested	Blank	Samples
LOAN_NBR	Loan number (key)							
FICO	FICO score	Yes	every 20			Remembered: you confirmed this as loan or application number on 2026-09-25	0%	L0000000, L0000001, L0000002

REV_DEBT	Amount or number	Yes			

Set up again empties Last Run used on Control, although the results tabs still show that Run (ringed, empty):

Control center

Fill in the shaded cells. The rest have starting values; change them if the population calls for it. Pick from the list, or type a number in the next column to override it. Changes apply on the next Run.

Setting	Choose	Or enter your own	In use	What it means
What the cube looks at	Every loan		Every loan	New loans have not had time to go bad, so a pocket full of recent loans looks better than it is.
How columns are recognised	12 values (recommended)		12 values	Term (36, 48, 60) or a grade from 1 to 10 is read as categories, not cut into bands.
A number column with this many values or fewer is a category	50 values (recommended)		50 values	State (50 or so) is still a dimension; a city or a dealer name is raised as a question instead.
A text column with more values than this is too fine to cut by	5 bands (recommended)		5 bands	Fine enough to see a trend, with each band holding a fifth of the loans.
How many bands a number column is cut into	Each band holds about the same number of loans (recommended)	n/a	Each band holds about the same number of loans	Every band can be tested equally well. Edges land on odd numbers like 663.
Where the band edges fall	Enough for 5 expected losses (suggested)		Enough for 5 expected losses (suggested)	Worked out from this book: the loans a pocket needs to expect 5 with the outcome at the book's rate, the textbook floor for testing a rate.
Is it enough loans to matter	10 losses		10 losses	A loss rate rests on how many loans lost money, not how many a pocket holds. Ten is a common floor.
Fewest loans in a pocket before it is tested	1% of the book's total losses		1% of the book's total losses	Scales with the book, so the same setting works on any population.
Fewest loans with a loss before a loss rate is tested	The rest of its band	n/a	The rest of its band	Broker under 620 against the rest of under 620. Both comparisons are printed; this one decides the flag.
Is it material	What luck alone can move it (suggested)		What luck alone can move it (suggested)	Worked out from this book: the gap luck alone can make in a pocket of typical size. A smaller gap can't be told from noise.
Does it underperform	What luck alone can move it (suggested)		What luck alone can move it (suggested)	The same as above, the other way: one over the gap luck alone can make in a pocket of typical size.
What a pocket is judged against	What luck alone can move it (suggested)		What luck alone can move it (suggested)	Worked out from this book: the revenue gap luck alone can make in a pocket of typical size. Revenue inside that gap reads as about the same.
How much worse than its comparison a pocket must be	95% sure		95% sure	The usual standard. About 1 pocket in 20 with no real difference will still pass.
How much better than its comparison a pocket must be	80% of the time (recommended)		80% of the time	The usual standard. Used only to say how big a gap each pocket's size could show; it never flags anything.
How far revenue must move before it counts as more or less				
Is it real				
How sure a difference must be before it counts				
How often a real gap should be caught				

Step 23: Prune something learned

On **Learned**, set a row's **Keep?** (column A) to **Forget**. Save, close and Run.

Meanings and answers carried over from past runs. Set a row to Forget to drop it on the next Run, and the column waits on Columns for you to confirm it again.

Right: the window says "Forgot CHANNEL, as marked on Learned. Check it on Columns and set C3 to Yes before the next Run."

Origination Cube

Browse...

1. Set up from this extract

2. Run the cube

Open the workbook

Ran on 8,000 loans from Consumer book Q3.csv; 132 tie-out checks agree.
Worst for Outcome, share of loans: REV_DEBT 17,187 and over / CHANNEL Broker.
Worst for Outcome, share of booked dollars: REV_DEBT 17,187 and over / CHANNEL Broker.
Worst for GCO per booked dollar: REV_DEBT 17,187 and over / CHANNEL Broker.
Nothing is worse for RANR per booked dollar at these settings.
Worked out from this book: fewest loans 71; worse at 1.37x; better at 0.73x.
Forgot CHANNEL, as marked on Learned. Check it on Columns and set C3 to Yes before the next Run.
Open Consumer book Q3 - Origination Cube.xlsx: start with where it bleeds.

The next Run refuses until you do:

Control starts blank again. The judgment calls are asked every time.

The window's count leaves the edges out. It says "2 columns to look at first"; three rows are shaded.

Step 25: What the memory holds is the last Run's, from any workbook

The memory is one file. Every Run writes every column's edges into it, and a blank cell clears them. So what the next new workbook gets is whatever the last Run of any workbook had.

On this walk the last Run before the Q1 extract was a wrong turn that typed 620; 680 on CHANNEL, a category. Q1's Set up filled it in, marked:

Origination Cube

Extract:

Set up Consumer book Q1 - Origination Cube.xlsx from Consumer book Q1.csv: 5,000 loans, 9 columns.
2 columns to look at first, on the Columns tab.
Next: fill in the shaded cells on Control and Columns, save, close, and press Run.

Columns							
For any meaning that's wrong, and set Cut by it to No for anything you don't want in the grids. Shaded rows have a reason under Look first. Set C3 to Yes when done, confirmed meanings carry over to the next extract.							
Checked every column? ☐							
Column	What it is	Cut by it? Yes means (outcome only)	Band edges (620; Show per 680 or every 20) pocket	Split pockets by it?	Look first	Why this was suggested	Blank Samples
LOAN_NBR	Loan number (key)					Remembered: you confirmed this as loan or application number on 2026-09-25	0% L0000000, L0000001, L0000002
FICO	FICO score	Yes	every 20		Band edges remembered from before: every 20.	Remembered: you confirmed this as a FICO score on 2026-09-25	0% -9999, 764, 715
CHANNEL	Category	Yes	620; 680		Band edges remembered from before: 620; 680.	Remembered: you confirmed this as a category to cut by: channel, state, product on 2026-09-25	0% Branch, Broker, Online
ORIG_BAL	Booked amount	Yes				Remembered: you confirmed this as booked or loan amount, which weights the reporting-level rates on 2026-09-25	0% 5939.21, 5774.18, 33194.87
BAD_FLAG	Outcome (yes/no)				1 value is neither 0 nor 1. They're left out of the outcome rates and counted, if they mean something, fix the extract.	Remembered: you confirmed this as the yes/no outcome: charged off, ever delinquent, decided by the system on 2026-09-25	0% 0, 2, 1
GCO_AMT	GCO dollars				1 value isn't a number among 4,999 that are. They're left out of any rate using this column and counted.	Remembered: you confirmed this as gross charge-off dollars on 2026-09-25	0% 0.0, #N/A, 11828.69
RANR_AMT	RANR dollars					Remembered: you confirmed this as RANR dollars on 2026-09-25	0% 118.05, -136.46, -165.47
ASSET_CLASS	Category	Yes				Remembered: you confirmed this as a category to cut by: channel, state, product on 2026-09-25	0% 3, 4, 2
REV_DEBT	Amount or number	Yes				Remembered: you confirmed this as a number to cut into bands on 2026-09-25	0% 2436.85, 12825.99, 7653.78

Checked every column? ☐							
Column	What it is	Cut by it? Yes means (outcome only)	Band edges (620; Show per 680 or every 20) pocket	Split pockets by it?	Look first	Why this was suggested	
LOAN_NBR	Loan number (key)					Remembered: you confirmed this as loan application number on 2026-09-25	
FICO	FICO score	Yes	every 20		Band edges remembered from before: every 20.	Remembered: you confirmed this as a FICO score on 2026-09-25	
CHANNEL	Category	Yes	620; 680		Band edges remembered from before: 620; 680.	Remembered: you confirmed this as a category to cut by: channel, state, product on 2026-09-25	

Clear anything under Look first you didn't type. Edges on a category are ignored by the Run.

Step 26: Clearing a cell forgets the edge

On the Q4 workbook, clear FICO's every 20, save, close and Run. Then set up Q1 again in a fresh folder: nothing is filled in.

Origination Cube

Extract:

[Browse...](#)

1. Set up from this extract

2. Run the cube

Open the workbook

Set up Consumer book Q1 - Origination Cube.xlsx from Consumer book Q1.csv: 5,000 loans, 9 columns.
2 columns to look at first, on the Columns tab.
Next: fill in the shaded cells on Control and Columns, save, close, and press Run.

When something goes wrong

What you did	What the window says	What to do
A. Split set on two columns	"Columns!H13 and Columns!H14: only one column can split the pockets. Clear all but one."	Clear one.
B. Split the only category that's cut	"Nothing is left to cut across ... CHANNEL (Columns!H8: it splits the pockets ...); ASSET_CLASS (Columns!D13, Cut by it? No)."	Clear the split, or set ASSET_CLASS back to Yes.
C. average on a category	"Columns!G8: "CHANNEL" isn't a number column, so it has no average to show."	Clear the cell.
D. Edges 620,680,740 turned into one number by Excel	"... read as the single number 620,680,740. Excel dropped the commas. Type them with semicolons"	Retype with semicolons.
D2. An edge outside the column (620; 680; 950)	"FICO runs from 496 to 921, so an edge at 950 would leave a band empty."	Type edges inside that range.
E. Workbook still open in Excel	"... is open in Excel. Close it, then press Run again." Set up says the same.	Close Excel and press again.
F. A column renamed after Set up	"Couldn't run: the extract has no column "CHANNEL" (a segment) ... press Set up again."	Press Set up, check the new name, set C3 to Yes.

What you did	What the window says	What to do
	Set up then says "New columns since the last check: CHNL."	
G. Fewer rows after Set up	"Consumer book Q3.csv has changed since Set up ...", then it runs on 6,000.	Check the loan count.
H. Workbook copied to a folder with a different extract of the same name	The same "has changed" line; it runs the new folder's 3,000 loans.	Press Set up in the new folder first.
I. Split set on GCO, the key or the outcome	"Columns!H11: "GCO_AMT" is marked GCO dollars, which can't split the pockets. Only a score, ratio, amount (the booked amount too) or category can."	Split by something known at booking.
I2. Split by the booked amount	Runs, 571 tie-outs.	As the message says, it's allowed.
J. A dollar amount typed as materiality (100000)	Runs.	Check says it's GCO dollars only.
K. The workbook picked as the extract	Set up: "... is the workbook, not the loan file. Pick the extract it was set up from". Run: "Pick the extract beside it."	Browse to the .csv.
L. 95 typed for "how sure"	"... from 0.5 to 0.999; got 95. For 95%, type 0.95."	Type 0.95.
M. 95, or 0.95, as your own revenue line	95: "... for 15%, type 0.15." 0.95: refused, no hint.	Type a share up to 0.9.
N. New columns in a refreshed extract	"New columns since the last check: CURR_STATUS, DTI. Columns!C3 needs a Yes again."	Check them, set C3 to Yes.
O. Forget on Learned, then Run twice	First Run runs and says what was forgotten; the second refuses on C3.	Check the column, set C3 to Yes.
P. every 1 or every 0.5 on FICO	"Columns: every 1 on "FICO" would make 392 bands (498 to 889). Use a wider band, 50 at most." (783 for 0.5)	Use a wider width. "50 at most" means bands, not width.
Q. every 0, every -5, every twenty	"Columns!F7: "every 0" should read like every 20: the word every, then how wide each band is."	Type a positive number in figures.
R. Edges typed on a category (CHANNEL)	Runs, says nothing; the cell is ignored, and remembered for the next new workbook.	Clear it.
S. Your own fewest loans bigger than any pocket (3000), with luck suggested	Runs, "Nothing is worse" for every measure, and "Worked out from this book: worse at 1.25x; better at 0.80x". Nothing was worked out: 1.25 is a fallback (defect 4).	Use a smaller number.
T. A small low-default book (5,000 loans, 1.34% bad) with every suggestion	The suggested floor is 374 loans, above every pocket. "Nothing is worse" for every measure, and "worked out" 1.25x again.	Read it as nothing was tested. Type your own fewest loans.

A: two splits

Origination Cube

Extract:

Couldn't run yet. Fix these in the workbook, save, close, and press Run again:
- Columns!H13 and Columns!H14: only one column can split the pockets. Clear all but one.

B: the only segment split

Origination Cube

Extract:

Couldn't run yet. Fix these in the workbook, save, close, and press Run again:

- Nothing is left to cut across: mark at least one column as a category (or term) on the Columns tab, with Cut by it set to Yes. Changed from what was suggested: CHANNEL (Columns!H8: it splits the pockets, so it isn't a segment of its own); ASSET_CLASS (Columns!D13, Cut by it? No).

C: average on a category

Origination Cube

Extract:

Couldn't run yet. Fix these in the workbook, save, close, and press Run again:

- Columns!G8: "CHANNEL" isn't a number column, so it has no average to show. Clear the cell, or change what it is.

D and D2: edges

Origination Cube

Extract:

Couldn't run yet. Fix these in the workbook, save, close, and press Run again:

- Columns!F7: the band edges for "FICO" read as the single number 620,680,740. Excel dropped the commas. Type them with semicolons: 620; 680; 740.

Origination Cube

Extract:

Couldn't run yet. Fix these in the workbook, save, close, and press Run again:

- Columns!F7: FICO runs from 496 to 921, so an edge at 950 would leave a band empty. Type edges inside that range, with semicolons: 620; 680; 740.

E: workbook open. Simulated by locking the file (chattr +i), since Excel isn't available here.

Origination Cube

Extract:

Consumer book Q3 - Origination Cube.xlsx is open in Excel. Close it, then press Run again.

Origination Cube

Extract:

How this was walked

On a Linux test machine:

- **The window:** Origination Cube.pyw's window on a virtual display under Python 3.12, its buttons pressed by driver/drive.py (through driver/win.sh), each state photographed.
- **Excel's part:** done cell by cell with openpyxl (driver/edit.py), standing in for picking from the dropdowns and typing.
- **The workbook:** each state printed through LibreOffice (driver/render.sh) and photographed page by page. driver/shots.py crops and rings every picture. Control's **Last Run used** column is outside the tab's print area, so driver/widen.py widens the print area on a copy to show it as Excel would on screen.
- **Wrong turns and revenue options:** each in a folder of its own, from a copy of the answered workbook (driver/wrong.sh, and driver/wrong2.sh for the ones that change the extract or the file). They share one scratch memory file with the main route, as a team sharing a memory folder would.
- **The build:** frozen at commit fec5f71 with git archive.
- **Reading tabs back:** driver/boxcheck.py, driver/pastline.py (dots past a line but boxed "the same": none now), driver/revenue_options.py (step 13's table), driver/threeway.py, driver/luckline.py (what the suggested numbers are made of), driver/

noplant.py (the split on a book with no debt effect), driver/lowdefault.py (wrong turn T's book).

- **The next extracts:** synth.make_rows with seeds 11 (Q4, 6,000 loans) and 23 (Q1, 5,000 loans).

The order walked: steps 1 to 17, the revenue and GCO line options, the no-effect book, 18 to 21 on the same workbook, 24 and the band-width wrong turns on Q4 copies, 25, 26, then 22 and 23, then the other wrong turns.
