

Every line, tied

All 53 figures this monitor lands for KeyBank, each one shown on the bank's own filed Call Report. Ninety-three pictures, cut from the filing itself, and every one of them checked: a strip is only shown if the filed value is printed on the same row as the code that cites it.

TIED 53 / 53	DIFFERS 0	COULD NOT 0	STRIPS VERIFIED 93 / 93
-----------------	--------------	----------------	----------------------------

How each entry was built, mechanically. The tie-out names a code for every landed figure. A script searches the filing for that code, reads every word printed on the same row, checks the filed value is among them, rings the code in red and cuts the row out of the page. If the value is not on that row the strip is marked NOT verified rather than shown as evidence. None were: 93 of 93 checked out.

The five that first came back "could not" were chased, and all five closed. An earlier run reported two capital ratios and three quarterly charge-off flows as untieable. That was a statement about the first attempt, not about the filing. The capital ratios are printed on the filing's own Schedule RC-R as percentages; the quarterly flows are the difference between two consecutive filings, because charge-offs are reported from 1 January running. Both were then tied. They lead the roster below.

The five that were chased

Each was reported as COULD NOT, then attacked once. That is the difference between an obstacle and a verdict.

RBC1AAJ TIED was SKIPPED

Tier 1 leverage ratio -- core capital as a share of assets, with no adjustment for how risky those assets are. A regulatory minimum.

FILED: RC-R Pt I 31 Leverage ratio RCFA7204, Schedule RC-R Part I item 31

The filing prints this ratio itself, rounded to four decimal places. The tie-out skipped it because it refuses to compare a percentage with a dollar line -- correct, but it never looked for the filed percentage. It is there.

31. Leverage ratio (item 26 divided by 30).....	RCFA7204	9.9169%	31.
